1. Portland Atari Club Meeting

Newsgroup: comp.sys.atari.st
Date: 1996-10-01 00:00:00 UTC
From: *atari@teleport.com*
Message-ID: <52ril9$m7n@ornews.intel.com>
Source record: 136610

The monthly PAC meeting will be held at Smith Center, Portland State University,
at 7:00 PM Tomorrow (Wednesday, 2 October 1996) in room 326.
A map is available at http://www.pacifier.com/~pac/text/map.txt and the main
club page at http://www.pacifier.com/~pac - contact telephone numbers and BBS
phone numbers are there as well. Please call any of the club officers (or me,
not officially an officer) if you need a ride!

This month we'll have a demonstration of Internet Relay Chat. Atari users
world-wide are invited to join us at about 7:30 PM PDT (that's GMT -7) in #atari
for a general discussion and demonstration of the advantages of real-time chat.

Other contact addresses for me:

2. Magic Problem: 68000 exception error.

Newsgroup: comp.sys.atari.st
Date: 1996-10-01 00:00:00 UTC
From: "Thomas R. Mccartney" <tmccartn@freenet.calgary.ab.ca>
Message-ID: <Pine.A32.3.93.961001112741.62480A-100000@srv1.freenet.calgary.ab.ca>
Source record: 136611

I am having an occasional problem with magic. Some programs that work fine ot a point when loading large files will give me a 68000 exception error and then lock the system.

I recall someone mentioning using the Addmem program to fix this kind of problem, but there is little or no documentaion as to what it does or how to configure it.

PLEASE HELP!

3. TT Ram Upgrades

Newsgroup: comp.sys.atari.st
Date: 1996-10-01 00:00:00 UTC
From: mike.harvey@worldnet.att.net
Message-ID: <52rlsf$tm@mtinsc01-mgt.ops.worldnet.att.net>
Source record: 136612

I'm considering doing a TT ram upgrade on my TT from 4 megs to 16 megs.. But does anyone know if you can use 4x9 (3 chip) simms for this or am I better off paying the often higher prices for 4x9 (9 chip) simms?

Respond here or e-mail to mike.harvey@worldnet.att.net

Thanks Mike

I believe Edith also supports KRZ files; since Annius has made it freeware, I'd suggest you give it a try. It seems to be a powerful text editor (although it works much better in resolutions higher than ST medium due to the relatively cluttered menu bars).

Write to atari@teleport.com for the alt.binaries.atari* charter.

12. Setup Mint/GEM, strange error message in Mint

Newsgroup: comp.sys.atari.st
Date: 1996-10-01 00:00:00 UTC
From: hallvart@sn.no
Message-ID: <325198d2f3204@sn.no>
Source record: 136621

I've recently installed Mint/X11/Chimera/Minixfs etc. on my system using the "TAF" setup.

I've successfully made X11 work, but apart from being impressive on my STe I see no practical use for it (I'd like to use X11 on a more powerful machine though, but it's way too slow and takes up too much memory on an ST).
So, what I want to try now is to be able to integrate Mint with my GEM setup. I've always wanted a decent UNIX shell, and Tcsh is the one of my choice. It worked fine under X11, but how on earth do I make it work without X11?

I'm also interested in setting up the PPP system for Mintnet, as I want to try out CAB with my Internet provider's system (I don't have a SLIP connection, so the regular connection with STiK won't do).

So, my question is- what do I do? Where do I start? How do I use it?
Another thing.... I get this strange error message. It comes up while booting the system:

pid 4 (GEM): minixfs: Rwabs returned -15 sector 1 drive D:

I though this meant that something was wrong with partition D:, so I checked it with "Chkdisk" (among others), but everything seemed to be fine. I got the same message from the desktop while trying to re-read the disk, by pressing [ESC]. This only happened with partition D: though.
C:, F:, and G: didn't give me any messages at all, but behaved like normal.
E: is the one I've installed Mint on.

Someone told me that the error message might be because I use ICD's harddisk software, but why won't I get error messages on the other partitions as well?
And besides, I seem to recall that I made them "AHDI compatible" when I formatted/partitioned the drive. I'm not sure how I can check this now though, and I don't feel like re-formatting the whole drive again.

I've been advised to replace my ICD software with "CBHD", but I don't understand enough German to make anything useful out of the "readme" files, and I don't feel like taking a risk of losing all my data just because I've done it the wrong way... Any ideas as to what I should do?

My setup consists of:

STe w/4 MB RAM
TOS 2.06 (UK)
Quantum Lightning 540S SCSI harddisk
ICD Link II SCSI adapter

Ah, forgive me...I seem to be a bad speller in both English and German :)

So I guess this is something like macros, it's a good idea which I may
check out should I get into making my own web pages.

Oh yeah...I heard Tony Greenwood might be working on some sort of page
designer, of course that will be in STOS. :)

Toad Computers has replacement power supplies for the ST, and I probably
should get one in case since that and my drive are the only original
parts left in my STe :)

I heard someone said something about doing something to it so it won't
fizz out again, but I forgot what it is. So I'll ask him and post it up
here sometime.

Not sure this can be done - I spent three weeks with one server trying to set it up and then gave up and found another one which didn't need it. Same problem with Oaisi2 and Ice.

>Are these SIP, SIM or Atari-special?

Ideally, you'll buy a SIMM board (from Toad, Computer Direct, or one of the otehr vendors) and then use SIMMs. Alternatively, you may wish to solder in your own DIPs - I don't recommend it unless you REALLY love soldering, but it can be done. The good news is that it's the cheap way to go; you'd need 32 RAM chips, 256kx1 bit at 120ns or faster. The bad news is that you'd have to solder 512 joints, plus a few more.

I would HIGHLY recommend calling a vendor and asking about SIMM boards.

Cross-posted to: nz.general,comp.sys.atari.st

I've got all sorts of old Atari-ST related bits and pieces I need to get rid of to anyone within collection distance.

External 720Kb disk-drive.
Discovery Cartridge (Happy Copier - Copies _any_ ST disk)
ICD Link (SCSI-1 Adapter)
ST-format #13-#41 plus various outsiders and a few other magazines.
All the disks for the above plus lots of ST-User and other disks along with stacks of miscellaneous software, some PD/shareware, several hundred disks, most of which work :)
Spare mouse.
FaST Basic
Cadaver
Bloodwych
Midwinter
International 3D Tennis
Crazy Cars 2
Airborne Ranger
Italy 1990

I'm in Wellington, New Zealand, anyone who wants the lot can have it for about $50. If you can't pick it up, then I could courier it to you for whatever the cost of that is on top of the $50. In the unlikely event of lots of offers, I'll take the highest one! :)

I'm not interested in splitting things up too much or shipping overseas unless I'm offered lots of money for things as the hassle & expense is substantial.

ftp://ftp.funet.fi/pub/atari/net/stik/ or /pub/atari/Newitems/. It should
do CSLIP. I haven't ever got the stik to work with my server but there's no
need since MiNTnet works like a dream.

You can ftp it from:

ftp://ftp.teleport.com/users/atari/

I wish I could say you could ftp it from my YAC pages, but it takes a
while to get things placed on my ISP's server, which is why I moved the
web pages with the Internet connectivity stuff to my own server. With web
access you can get all the latest stuff at:

http://virtual-markets.net/vme/yac/

or
http://www.teleport.com/~atari

as well as the UK site. I think the new package supports c-slip, but not
ppp, but I haven't had time to mess around with it much yet.

: problem with Oaisi2 and Ice.

I know this can be done, because I did it in my script. Unfortunately I'm
not at home now and can't remember what it was. It is described in the RM
statements of the script itself (look in the STiK folder, if you tried
installing with the earlier setup program the script you have won't have
all those explanations embedded in it). I think it was one of the slash
characters that is used to signify a return: / \ or maybe | (the pipe
character). I had my script wait a half second using the WAIT command,
then send the return.

tomo (tomo@fly.cc.fer.hr) wrote:
:
: Which software for F030 is (in your opinion) the best for:
:
: -DTP

I use PageStream, and like it quite well. It is a great deal for app. $40 (which is its current list price). I also use Papyrus a lot. It is a document processor but is actually very close to a desktop publisher. Other programs to consider include Calamus (I never grew fond of this one even though I paid a lot of money for a copy), DA's Layout (I liked the look of this one in the demo), Gutenburg, Kandinsky (an art program really, but, like Papyrus, could serve your purposes), etc...

: -comms/modem/FAX

I used to use STalker, but now I use STorm for terminal stuff as STalker seems to conflict with HSMODEM, which I need for STiK. I use STiK with Antmail or CAB for e-mail and web stuff. I use STraightFax for faxing.

: -music

I don't do any of this.

: -multitasking

I use Geneva. I'm surprised no-one else has mentioned this one yet. It is great. Of course, I've never owned Magic, so I can't compare it to that. But you can even use it as a replacement AES for MiNT.

I am using a FMNCII, from Go Direct(ST Review offer), that I brought a couple of years ago. The trouble is that it keeps slowing down, ATM it is 35 min slow. I always seem to update with prog supplied, but it keeps doing it. Its not a major problem as the clock gets updated everytime I log on but is annoying all the same. Does the battery need changing or something, or do I need to buy a new one?

Thanks

James

Not using NVDI. If I am using Cubase Audio I can print at 360 dpi because it uses it's own routines. The only other application I have that uses NVDI is Arkus (like font list) and it bombs out at 360 dpi as well.

Does anyone out there have a version of NVDI greater then 4.10? Unless there is some problem in my auto folder setup I'm beginning to believe that NVDI is the problem.

Hi,

Roni Music Home Page offers free down load of the Sweet Sixteen MIDI
Sequencer for Windows and Atari computers.

Two versions are available:
1. A demo version which is a complete version of Sweet Sixteen with all
file saving disabled.
2. A "lite" version which lets the user save files but certain other
functions are disabled.

: disk)
: - how the quality of the audio works out
: - how many channels can an STe handle
: - what's the recommended size for SCSI disk

Ummm...as far as I know...CuBase Audio will not work with the Mega STe.
You need a Falcon to run CAF.

This doesn't mean you can't do hard drive recording with your atari
however. What you'll need is a Yamaha CDX hard disk recorder. This
device would be controlled by machine code using a sequencer that supports
it such as Emagic's Logic. I don't have much information on the Yamaha
HD recorders other than I know they make two or three different models.
Check out the yamaha home page for a bit more info on these machines.
http://www.yamaha.com

Hope this helps,
Brian

47. STiK, needs to send CR at login - how?

Newsgroup: comp.sys.atari.st
Date: 1996-10-01 00:00:00 UTC
From: mbecroft@tos.ak.planet.gen.nz
Message-ID: <GJBPEIUQUp@tos.ak.planet.gen.nz>
Source record: 136687

I am trying to set up STiK for a club member who has an ST and a SLIP
internet connection.

When the modem connects, STiK needs to send a single CR character to
make the "login" prompt appear.

Unfortunately, reading the documentation did not help me to find out how to
cause STiK to do this.

If you know what to put into the dial script of STiK to cause this to happen,
please explain it to me.

Your help is much appreciated.

Cubase Audio Falcon does not work on anything except a Falcon.
Cubase Audio for the (Yamaha) CBX-D5 hard disk recording system
Works on a Falcon. It needs a no-longer-available Atari DMA to
SCSI II adapter to work with a ST, STF, or STFM (TOS 1.4 highly
recommended!). The STE has problems with the DMA to SCSI adaptor
(according to a Steinberg employee this is Atari's fault for
doing something wierd to the STE's DMA) and the MEGA STE does not
work at all because it has a SCSI I system that doesn't get along
with the SCSI II adaptor. Believe me, the best way to go is to
buy a C-Lab Falcon Mk X/ Cubase Audio package.

From: bjr@edison.ebicom.net
Message-ID: <52qfsh$ohe@einstein.ebicom.net>
Source record: 136691

Aloha,
I'm about to get a VGA monitor for my Falcon...
Garsh, there's so many out there! I don't know where to begin.
I'd like to get into a nice "15 monitor for less than $400, but I'm
very weary about going through computer shopper and picking the cheapest
one. I'd like to run it in one of the higher resolutions in two color
mode with CuBase Audio. In True Color/256 modes, I doubt I'll need
to go past 1024 X 768. Also, I don't intend on installing extra hard-ware
anytime soon.
So, with this in mind...what's a good quality/low priced 15"
monitor for the Falcon standard modes?
Does the Falcon go to 1024X768? (without extra hardware)
Does the Falcon go to 1280X1024? (without extra hardware)

Let the discussions begin :)
Brian

: No, it doesn't require TRMPWR, but it doesn't provide it either.
: Hence, if you're using an ICD Link or similar host adapter which requires
: power from the SCSI bus, it won't work unless you wire in a jumper.

If you already have other SCSI devices that "DO" provide termination
power...then you should be okay when using the Link.
Otherwise...like he said...wire in a jumper (3volts I think) to pin
26 on the SCSI side of the Link.

Another option is the Syquest EZ135. It's faster...the disks are
135meg...its about as small...has better warranty (2 on drive/1 on
disks)...and the disks are less than $30 a piece...it provides
Termination power. I'll have to check, but I think parity can be
disabled on the EZ135, which means it should work with ANY of the
hard drive hosts (SCSI) for the Atari.

Source record: 136694

Hello Atarians,

How would you like to connect to almost all http's, ftp's, etc.
within CAB with out bombs, crashes or the dreaded Runtime 163
Error? Well, now you can! How? By using the ANONYMIZER! This
FREE service allows you to just type in the URL that you want
and click. They get about 300,000 hits a day, so somebody is having
fun. Here's examples how:

http://www.anonymizer.com (Web Page)
http://www.anonymizer.com/open.html (To just type in any URL)
http://www.anonymizer.com:8080/ftp://ftp.cnam.fr/pub/Atari (direct)

If there are Web pages or ftp sites you are having trouble
connecting to just try the ANONYMIZER. You'll thank me later :))

"Who is that Masked Man?" It ain't the LONE RANGER! Hi Ho Silver.

If you have trouble connecting to ANONYMIZER here's my TCP Stuff:

This for the *NEW* STiK v1.11
TTL = 64
PING_TTL = 255
MTU = 576 (servers use 576 octets, 252 bombs my Falcon)
RCV_WND = 2000

I'm using the new CAB1.41(CAB_OVL1.18)/STiK1.11
The only problem I'm having is with the WWWCACHE. The new CAB does't
like an empty folder, so I just run 1.30 to put a few files in the
folder and then everything works great!! (I didn't run the Install.prg,so...)

Message-ID: <52r1vk$sle@news.rrz.uni-koeln.de>
Source record: 136695

Hi!

I don't know, if I'm the only one who's having this problem, but a few days ago I've downloaded the new cab.ovl, and it doesn't work properly. It very often hangs itself and gets stuck in an endless loop while trying to connect to a host. Neither the stop-button nor pressing "esc" then helps, the only thing left to do ist to reset the computer.

So, you better don't delete your old version of the cab.ovl ... this one still works fine with cab141.

: attempt to connect. Falcon 030 with TOS 4.04.
:
no problems here (TT, Magic 5.02). At first, I got similar problems with
the nw CAB.OVl (1.20) and the new CAB (1.41). Then I deleted all files
in the cache (after CAB reorganized it by creating all those a-z folders
like netscape does) because the old cached files were still in the main
cache dir after the reorganization. From then one (until now at least)
the new CAB/CAB.OVL combination is working fine for me. The only problem
is that I simultaneously switched to another proxy , so maybe that's the
reason why it's working now and not the cache cleanup :(

Bye, Martin

Could you get back to me when you've installed everything? I'm using 0.80
right now, and when I tried to upgrade to 1.01 by substituting the old
binaries for new ones, my setup became very unstable.

I'm running a modified version of the TAF-package (X removed, N.AES installed,
some utilities added, MiNTnet upgraded to 0.80 by substituting binaries.)
which works quite well, although I have some weird chrashes (My Falcon just
freeze when it has been left on a few hours. Resetting doesn't help,and the
freezing appears more frequently as the hours goes by.) I blame that on my
modified Falcon (Home-made 18/36 accellerator) and my second IDE where the
Minix-partition is. The hd makes a very loud and high-pitched sound after
20 minutes. It drives me mad.

I know some offers were made at one time...

>> On the SMD-100, here's their press release on it.
e>
e> So what does this mean? The text only talks about PC, Mac and Amiga.
e> Does this mean that we can use it on the Atari, but can't really do
e> anything useful with it as there isn't any software for it?

It's a standalone device that'll work with a domestic TV as long as you've
got a SCSI CD-ROM to play from, but it doesn't require any computer. AIUI
the only software to control the device by computer is for the alternative
platforms.

e> Anyway, it does sound cool. :-)

PCW magazine already has a review machine and I think they're looking to go
'mass-market' with it if they can...

76. MintNet with Magic

Newsgroup: comp.sys.atari.st
Date: 1996-10-02 00:00:00 UTC
From: jake.goerzen@dinuba.com
Message-ID: <8C98569.0363005BB7.uuout@dinuba.com>
Source record: 136516

Why can't MintNet be compiled especially for Magic? Magic supports loadable device drivers and file systems, although I haven't seen or heard of any yet. I'm sure there's more to it than I understand, but all that needs to be done is:

1) recompile MintNet to integrate into Magic

2) write a nice GEM dial-up networking program to configure MintNet

3) write a suitable CAB.OVL for it

and, presto. we have SLIP,CSLIP,PPP!

77. Need help on Towers II

The main thing with MinixFS is not its ability to use long filenames, but more
that it is capable of using "real" file permissions, user ownership and
symbolic links.

There is an installation target in the makefile. It does, however require that
your system is somewhat unixish. If it is; just type make install and answer
the questions.

>
>thanks for any help on this one.

I think there is a version of Cubase Audio for ST(E)/TT - which obviously don't have the audio capability of the Falcon. It requires something called along the lines of a Yamaha CBX-D5 conneceted to your ST(E)/TT because the sound quality of those machines is frankly not very good (in professional recording terms at least).

>If I remember correctly, it was Doug Little who made Photochrome, right?
>So why not ask him if he wants to release the sources (if he hasn't
>done it already). I bet that he would do it more than gladly so that
>someone else could modify it to be a slidshow program! Its that easy
>(maybe...)! :-)

I actually spoke to Doug a few days ago, face to face (wow! Met the man himself!!)
and he said it has been so long since he has done anything with Photochrome, he
was having mixed decisions about releasing the source. He'll give it to you if you
register, and come on, I think he deserves some appreciation for his efforts - so
just do that if you want the source.

In answer to Tony's points... It would be perfectly possible to do a slideshow
program to display 24-bit pictures, but would you really want to wait while it
reduces the colour information down to a more manageable depth? (Essentially the
delay in Photochrome while the bars scan up and down the screen). Would it not
be convenient to convert the pictures to the propietary *.PCS format and then
use the PCSVIEW program?

Incidentally, here's a little snippet that probably not many people know. When I
registered my Photochrome, I got a letter from Doug which mentioned that he was
working on an ST version of the then Chromastudio 24 on the Falcon (now called
Apex Media, of course), using the Photochrome system! I was mindblown! It was to
be a similar kind of package - painting and all that, but for the humble ST! It
seemed great to me, to at last be able to mess around with those colourful pics
(Spectrum 512 is getting a bit long in the tooth now, eh). "So where is it?" I hear
you cry. Well, it hasn't been finished and doesn't look like it will be. Other
committments, you know.

It's good in a way that he went on to do Apex, but the Chroma ST was left to
gather dust. Another Black Scorpion coder (if I remember correctly) picked up
the pieces and got as far as making the package be able to draw a few things
(but not sure if the Photochrome display had been implemented) before abandonning
it too. Is anyone up for finishing this? I think Doug would be the best person really
but the poor guy must be working 24 hours a day with all the stuff he's got going.

Anyone else see the preview of Apex Alpha on the C-LAB MK-X with Afterburner?? Cool stuff indeed!!

I have heard the same thing!!! Also, raffle prizes are already
arriving from vendors who couldn't make it (like Toad - the Toadfest
is less than two weeks after our show, and the ycouldn't manage to do
both). We are only 11 days out now - make plans to attend, everybody!

Be sure to visit the club room (seperate from the show floor) to play
MIDI Maze, see and play my classic Atari game collection, and REGISTER
FOR THE RAFFLE!

And don't forget - the Texas State Fair is just a few miles from the
show site.

Attend the Dallas Atari Show - Saturday, October 12th, 1996 at the Infomart!

89. Re: Suggesstions on VGA for Falcon

Newsgroup: comp.sys.atari.st
Date: 1996-10-02 00:00:00 UTC
From: dhedberg@moksha.kuai.se
Message-ID: <52u5ah$lmh@kaon.kuai.se>
Source record: 136571

```
: Aloha,
: I'm about to get a VGA monitor for my Falcon...
: Garsh, there's so many out there! I don't know where to begin.
: I'd like to get into a nice "15 monitor for less than $400, but I'm
: very weary about going through computer shopper and picking the cheapest
: one. I'd like to run it in one of the higher resolutions in two color
: mode with CuBase Audio. In True Color/256 modes, I doubt I'll need
: to go past 1024 X 768. Also, I don't intend on installing extra hard-ware
: anytime soon.
: So, with this in mind...what's a good quality/low priced 15"
: monitor for the Falcon standard modes?
: Does the Falcon go to 1024X768? (without extra hardware)
: Does the Falcon go to 1280X1024? (without extra hardware)

The maximum resolution you can get without any extra hardware or software
is 640x480 in 2-256 colour mode. In TrueColour the maximum resolution is
320x480 pixels. With software screen resolution extenders you cen get
about 800x600 interlaced. With hardware and softare (like Blow-UP or
Screenblaster) resolutions up to 1024x768 pixels is possible and in some
video modes even 1280x1024. I wouldn't recommend you going this high
without an accelerator, though. The Falcon slows down pretty bad due to
the higher bus load. The maximume resolution of TrueColour is btw around
320x480 even with hardware. Only with an accelerator you cen get higher
resolutions in TC mode. Hope this helps!

The following is a list of hardware and software for the Atari ST,STe, TT
or Falcon computers. All these items are in pristine condition, boxed and
with manuals. Why buy new when you can save pounds!

SOFTWARE
Calamus SL with mask module, blend module, starscreening kit, epson
stylus colour kit (drivers, colour correction curves etc), lots of other
modules, HUGE font library, clipart utility packs including professional
vector images, caluser utilities 1 & 2 vols

PLUS: Outline Art version 3 (24-bit colour vector art package)

All this, boxed and registered with enormous 500+ page manual, only ï¿½150!

DA vektor professional : SOLD
DA picture : SOLD
Calligrapher Gold (all plug-ins included): ï¿½50
Truepaint: ï¿½15
Trueimage: ï¿½15
Studio Photo 24: ï¿½30
Script (macwrite clone): ï¿½35
Papyrus Gold: ï¿½50
Diamond Back 3: ï¿½25
Harlekin 2: ï¿½15
Neodesk 3: ï¿½15

PHASE-4 3D key animation studio package includes:
* Chronos 3D keyframe animator (with dongle and TT/Falcon versions):ï¿½80
* Phoenix 2 object renderer: ï¿½60
* ANM-link (interfaces chronos and phoenix): ï¿½20
* Cyber 3D edit/creation stuff (cybersculpt, cyberpaint, cybercolor
etc):ï¿½20

"K. Ellis" <kellis@primenet.com> mumbled indistinctly:

>tos4.04 does it. So it is not loadable from the hard drive completely
>because you still need to have a floppy that contains the hard disk
>driver. Apparently Craig knows how to do it, and says that everyone
>knows, actually not me, the author and you don't know howto do it

When multiTOS was first released, we tried it just to get the new AES
on an old STE. It worked fine, if a little slow.

>fully loadable from the harddrive without having to insert a disk
>with the driver. So just ask to craig I am sure he'll help you out.

As I never like to appear stingy (in spite of what Mr Ellis may think)
, here is a quick guide to getting AES4.1 to run without MiNT.
It's easier than messing about with TOS4.92 and gets you the same
benefits. In fact, more...

1) Find a copy of AES4.1 somewhere.
2) Copy the GEM.SYS file from the AES4.1 archive to the auto
folder of your hard disc.
3) Rename the GEM.SYS file to GEM.PRG.
4) Reboot the machine. You will now get the new AES in single tasking
mode, loaded from hard drive, with the drivers for the HD still
in place.

Note that you cann't run it from the desktop - it MUST be run from the
auto folder, as the AES attempts to open a physical workstation to
the screen, and will crash if there is one already open (ie. GEM has
already started). Sloppy, oAESis and XaAES both check for a loaded
AES first and grab the physical workstation handle from the existing
AES before installing themselves...

Honestly, I don't know why people don't try these things.....and yes,
I have tried it, and yes - it does work (at least on my falcon).
Though god only knows why you would want to ;)

My system:
F030 4Mb / 32MhzCPU
NVDI4
FalconScreen
PowerUp

You could also do this with older versions of MultiTOS as well....
I did it on an old STE some time ago.

>hehehehh I love it. :)

I bet you do....

Craig.
(having done his research, as always)

I have noticed the same thing! What is wierd is that if you use the URL option and enter the html by hand, or go to a html from the hotlist, it works every time! Really neat, with display of bytes\filesize bytes, at the top! What is not so neat, is if you click to follow a link, it will sit there trying to connect forever! I have yet to get a connection with the new setup by following a link on a web page! Has anyone got it to work properly? If someone has then we can start to figure out what the rest of us have done wrong!

The number of chips on the SIMM is totally irrelevant. 3-chip SIMMs are usually cheaper and consume less power, so as long as you use 4 identical SIMMs, you should have no problems. As always, be sure to get a return warranty in case you happen to find one of the 2 or 3 brands of SIMM that don't work with your Atari.

>SIT and SEA!)

True, however STzip 2.6 is fully PKzip 2.04g compatible and has a nice GEM
interface - it even supports "drag & drop" for both creation of new archives,
and opening old ones.

>>... suugest packaging archives appropriate to the target filesystem...
>
>easy for you to say :^)
>Just use 2in1!

I suspect that you would find using 2in1 wihtout the required (seperate)
archiver packages to be rather unrewarding. <G> Also, it's best if you can
"tune" the command line options; this can be done in 2in1, but ONLY if the user
understands the TTP commands to begin with.

So, while the concept is terrific (a single shell for all your archivers), the
original problem still exists - you have to be able to find and unarchive all
the archivers you want to use with 2in1. STzip is usually packaged as a
self-extracting TOS file, BTW. I keep a couple copies on floppy just in case of
disaster. Oh, and it's postcardware - REGISTER! It's as cheap as you can
possibly get and not be totally freeware.

And that's One Man's Opinion<tm>. YMMV.

Message-ID: <3252C6D2.F93@siba.fi>
Source record: 136582

Does anyone else have problems synching the Omega II to incoming Midi
Time Clock stream? The normal Midi clock works fine, but I canï¿½t get the
MTC working at all. I havenï¿½t had a chance to try another program yet,
so it could be a hardware problem also (but how? Hmmm...)

The machine is a MegaST2, propbaly pretty old one. And the Omega is v5.2
I believe, one of the latest or the last version.

>designer, of course that will be in STOS. :)

so? :)...why did you fel the need to add that? what difference would
it make <smile>

As a html designer would not depend on speed/proc time and a whole
bag of other stuff, then a html designer could be made, that would
work on all tos versions,
The concept is qite simple as it mainly consists of string
manipulations, if you already know html code and can program then a
full fledged web page designer should not be much of a problem,

To be honest, a bloody good "Idiots guide to making web pages on (and
with) an ATARI" would be of more use, I am a great fan of Idiot
guides, I used one to learn programming :))

>delay in Photochrome while the bars scan up and down the screen). Would it not

YES YES!, The above would actually have been the perfect choice and
exactly what I would have liked, going for quality rather than speed?
especially a slide show that converted to the "ham","non flicker",
that is an exceptional view, even on a FM, the main and top priority
was to show the pictures as scanned, as intended, in other words worth
the wait :)

>be convenient to convert the pictures to the propietary *.PCS format and then
>use the PCSVIEW program?

As explained, I wasn't even aware there was such a program in the
package, have since got a copy, and although they are better than 16
colours, the PCS would not seem to be 256 colours?,either that, or
didnt port over to well,

UF>the drives only work when there's a terminator at the beginning, but not
UF>the end.

Right. You know that the falcon itself is terminated, so you only need a
terminator at the other end of the cable?

If this is already what you have, then this sounds like a problem with
termination power. The TERMPWR line on the SCSI bus should have at least
4.5V to power the terminators - now if the TERMPWR fuses in your devices
are blown (maybe due to a short some time ago), this may lead to this
behaviour.

From: dave@mbha.demon.co.uk
Message-ID: <961002Z203610.205dave@mbha.demon.co.uk>
Source record: 136591

Greetings all,

A colleague of mine has an (oldish I think) version of Calamus which she brought 2nd hand. She is trying to run it under Magic (4) and Ease. All goes well until when a new document is created and she moves the cursor beyond the document boundary (for example to use an icon on the icon bar or panel), Calamus goes into the background. Clicking on the document area again brings it to the foreground, but of course, whenever an icon is needed the thing goes into background again.

Anyone know if there is a fix for this?

Hi v.e.bakker@getronics.nl, on 01 Oct 96 you wrote:

v> What sort of modules are needed for memory upgrade of a 1040ST(-F)?
v> Are these SIP, SIM or Atari-special?

If you want to do it the easy way you buy a memory expansion board (like Marpet's Xtra RAM although there are many others) and fit it with standard SIMMs. This expansion board is fitted using solderless connections. Others may require a bit of soldering.

If you are stating with 1048Kb the first easy expansion is to 2.5Mb - the next to 4Mb.

Date: 1996-10-02 00:00:00 UTC
From: Brian Sturk <bsturk@nh.ultranet.com>
Message-ID: <3252DCEB.78FA@nh.ultranet.com>
Source record: 136593

Is it possible to dump TOS from an ST and be able to use it in Gemulator? The TOS I have is from MagicPC and it is in German.

113. Can an STe use a 2.5" IDE ?

Newsgroup: comp.sys.atari.st
Date: 1996-10-02 00:00:00 UTC
From: paz@wile.demon.co.uk
Message-ID: <844382560_OASIS_@wile.demon.co.uk>
Source record: 136595

Hello, me again :)

I first posted this a couple a couple of days ago but haven't seen a reply yet.
I reckon this means one of the following:

1. It never got here 'cos Oasis or Demon f**ked up again :(
2. It can't be done :(
or
3. You all hate me and have stuck me in your killfiles (shurely not ?!) :)

Anyway, here it is again.....and.... ACTION ! :)

Hi everyone,

Well, we just got back from the London Atari show (which was excellent, I spent *far* too much money ! :))) where I bought a nice new 810 meg 2.5" IDE hard drive for my Falc. :))))

So what ? You say...

Well, we're wondering of there's any way we can attach my old 127 meg 2.5" IDE drive to my mates' STE. I thought System Solutions did something that connected to the cartridge port to enable the STE to use IDE stuff (CD-ROMs, hard drives, etc.) but apparently, their supplier can't get 'em anymore :((

Does anyone know where I can get a piece of kit to connect this drive ? I'm wondering if Toad in the US do 'em and if so, is anyone importing their products ?

Any help would, as always, be *very* much appreciated :))

Thanks, people :)

See Ya,
Paz.

Tony Greenwood (stosser@airtime.co.uk) wrote:
:
: The concept is qite simple as it mainly consists of string
: manipulations, if you already know html code and can program then a
: full fledged web page designer should not be much of a problem,

Aye, but making a WYSIWYG (what you see is what you get) editor would be a bit of a challenge. Keeping it up to date would be a trick too.

From a STOS programming standpoint, the program I envision would run in a GEM window, so that would be a really neat trick if you could do it with STOS. I guess it wouldn't have to run in a GEM window, but I would want to run it under Geneva, without having to change from my default resolution, etc...

On the other hand, I, personally, am happy enough using a text editor and checking my work in CAB. Even when I'm at work on my PC I avoid those crappy Web Editors and simply load up the notepad.

: To be honest, a bloody good "Idiots guide to making web pages on (and
: with) an ATARI" would be of more use, I am a great fan of Idiot
: guides, I used one to learn programming :))

Ah, but you don't have to be an Atari programmer to do this. Any idiot (like me) can slap something together in html and throw it onto a web site. Check out:

http://www.ncsa.uiuc.edu/General/Internet/WWW/HTMLPrimer.html
or http://ncdesign.kyushu-id.ac.jp/
or http://home.netscape.com/people/hagan/html/top.html

as examples.

I managed to install KGMD on about the 2nd or 3rd go and I knew nothing of German and very little about MiNT!! Nothings changed after six moths of use either!

It's pretty straight forward - maybe a translation of the actual installation script would be useful for people.

There is a guy in Belgium who is programming an HTML-editor right now.
It's still in a very early beta stage but it looks very promishing.

You can also use Everest or Qed with html2_uc.krz. This is somekind of
a textmacro. I've use it to design a webpage. The Kurzel is very
usefull indeed.

I've got a BJ10-sx, and when I'm printing DVIs I use the LQ drivers for
rough copies, and IBM settings for high definition prints. I'd need to
look up specifics, but they work fine for me.

Norman Amor (namor@unixg.ubc.ca) wrote:

: Someone just acquired an Atari SG-10 printer, very second-hand, and it
: will probably work, but she needs a new ribbon. Where do these things
: come from anymore? Is there anything generic/alternative/existent which
: will work?

These printers were and still are workhorses, released for sale around 1984. I bought one around that time, after seeing my friend's and watching it work. I'm still using it today, 12 years later. It uses regular typewriter ribbons, and if you have empty typewriter spools, and a printer cart that uses 1/2 inch ribbon, and you can respool the spools, you got a nice source of ribbon. Don't forget to put in a knot in the final two inches on each end, for the part of the printer that does the reversing.

: Personally, I'm not even sure what a SG-10 looks like or how old it is,
: and my reputation for practical wisdom could be at risk here. Help.

Check the bottom of the printer. That's your most reliable place.

If I'm remembering right, the Star SG10 and SG10X printers are basically the same thing, being 80-column printers. The 15 and 15Xs were the 132 column ones. I've not come across any of those. However, I recently came across an SG10 at a thrift for $15.

Something close to it.

There are still other editors available that can server the same
purpouse may be even better.

There is xed. I used it once for TeX. I had a special configuration file
for it.

Also elvis and emacs should be considered, if it is a powerfull tool you
are looking for.

Emacs can be programmed in a lisp like language. So there is no problem
for a programmer making a comfortable HTML editor out of it. May be wit
WYSIWYG, because the lisp program may also format the pages on the fly
(well not too fast on a ST...).

Elvis is a VI clone. That maens that it is about as configurable as the
vi. I think that this says it all. Put an ex.rc file in your directory,
and get best results.

Christof

Hello !

I have the same problem and i found this solution :

In DIAL.SCR after the CONNECT successful and unsuccessful lines insert :

FIND =
RESP = /

It sends a carriage return; if you want a line feed, replace / by | .

Bye ! ï¿½ bientï¿½t !

> pid 4 (GEM): minixfs: Rwabs returned -15 sector 1 drive D:
>

I used to get this on a 120 Mbyte Minix partition that was corrupted.

My problem was caused by Minit, which formatted the partition as 250 Mbyte
(it did not correctly measure the partition size).

The 'Rwabs returned -15 sector problem' only appeared when I had filled
the partition past the 120 Mbyte size, I was trying to write data to a
disk that had no more free space.

I backed up the files, re-initalized the partition manually &
everything's been fine since.

> software).

Well, get MagiC 5 then. It's faster than TOS 4.04 and you get long filenames,
true multitasking and a new basic but very good desktop which handles
pictures on the desktop in colour!

If you have alot of RAM you could stay with Thing which will replace your
desktop with a better (?) one. It can also handle background pictures in
colour (I think).

Only one problem. It can't handle GTP applications correctly. ;-)

136. Captive by Mindscape - any hints etc?

Newsgroup: comp.sys.atari.st
Date: 1996-10-02 00:00:00 UTC
From: mbecroft@tos.ak.planet.gen.nz
Message-ID: <GJCUEBUQUp@tos.ak.planet.gen.nz>
Source record: 136654

This question is posted for a Tariland club member:

"The game Captive by Mindscape:

What are the planet probe codes and some of the lazer door codes for mission 2
level 1.

I would like any very helpful hints and any possible cheats."

If you can help, please reply by email.

Thankyou.

Hi, I think the best thing you can do for your falcon is to get Magic
as OS .
For the background picture, magicdesk(desktop under magic) supports bg
pict. As well as most other desktop replacement (thing, ease,
neodesk4, Gemini etc) ..
However, if you just want to display color picture in background, I
found a prg (under single tos 4.04 in your case) that will do it
great. (except, it doesn't like the resolution change). It's called
deskpic5. You can find it on most ftp sites. Deskpic5 consists in a
auto prg and a small accessory. You can load 256 picture in gif format
if you want.. It works very well.. Bye..

140. Falcon tuning

Newsgroup: comp.sys.atari.st
Date: 1996-10-02 00:00:00 UTC
From: schwarz@isa.de
Message-ID: <52th5r$no2@exnewton.isa.de>
Source record: 136658

Hello to all other Falcon users out there!

It's about time to build up my Falcon a little. What I need is:

A. more memory (VERY important)
B. higher resolution (important)
C. more speed (nice, but not that important)

I heard that the FX card will deliver all of that for an affordable
price, but what I need to know (and what is best to ask on this group,
with all the Atari experts tuned in) is:

1. Does the FX work flawlessly together with CUBASE AUDIO FALCON?
2. Can CAF use the memory I plug into the FX for RAM tracks and Sampler tracks
a) at all?
b) up to 14MB or even more, e.g. 32MB?
c) (What's the max. memory you can plug into an FX?)
3. What screen resolution does the FX deliver?
4. If I want to do 1024x768, is a so called "VGA monitor" enough, or
only a "Super VGA monitor", or do I need a multisync monitor?
5. What alternatives are there
a) to satisfy all of the above requirements A-C?
b) to satisfy requirement A and B (memory and resolution,
maybe two separate expansions)?
c) to satisfy requirement A (a pure memory expansion)?

Thanks to all who answer...
...Diemo

>
>Unfortunately, reading the documentation did not help me to find out how to
>cause STiK to do this.
>
>If you know what to put into the dial script of STiK to cause this to happen,
>please explain it to me.

Taken directly from the sample DIAL.SCR provided with STiK 1.11:

```
# Dial Script Part 2 - Log in to the Service Provider.
#
# The STiK dialer uses the standard `conversational' method for
# login to the provider. This involves searching for certain
# words and sending an appropriate response. The special
# response $GET_IP is used to read the IP address that your
# provider has assigned you for this session. If your provider
# has allocated you a permanent IP Address, then you should set
# it in the default.cfg file and NOT use $GET_IP.
#
# Each step of the `conversation' is specified as a FIND line
# and a RESP line. There can be up to 10 steps. Each FIND
# *must* have a matching RESP and WAIT, even if they have no
# value. (values are put into arrays in the order they appear)
#
# WAIT is the time in milliseconds to pause before each FIND/RESP
# For accuracy, the time should be a multiple of 5.
# (ie: a WAIT = 4 would result in a pause of 0. WAIT = 12 would be 10)
#
# By default each RESP line is sent with a carriage return
# character at the end. If you need to use a line feed character
# instead then put a | at the end of the line. This only works
# if the | is the last character of the line. A / character at
# the end of a line means carriage return, but this is the default,
# so you don't need it.
#
# If you want to send just a Carriage Return, then use RESP /
# If you want to send just a Linefeed, then use RESP |
```

```
#
# Note that if neither FIND or RESP have a value, they are ignored,
# but in this case the WAIT (if any) will still pause.
# If FIND has no value but RESP does, the value of RESP will be
# sent immediately or after the WAIT time.
# If FIND has a value but RESP does not, then after the FIND
# the dialer will move straight on to the next WAIT/FIND/RESP
```

Thus, I surmise that the following should do what you want:

```
WAIT
FIND
RESP = |
```

Possibly you need a / instead of | but that would depend on your server.

Incorrect, John - you can make it as simple or as complex as you like. The scripting language is extremely powerful, allowing you to handle such things as playing a special audio file when a certain person logs on, animating menus in both VT-52 and ANSI with a single menu file, indicating which CD-ROM is in the drive automatically if you have multiple CDs (I have 2 drives and about a half-dozen disk that rotate whenever I feel like it), blocking or permitting access to certain menus based on the callers graphics mode (I don't want "PC Pukes" with ANSI trying to get into the Instant Graphics! door games, for example), off-line QWK packing for callers who just want to get their mail and go, and so much more.

The thing is essentially identical to IDE. MS-DOS has a built-in limitation on the number of tracks or sectors it can handle (I forget the exact values, but it comes down to a limitation on the size of the drive), so drives larger than that are usually marked EIDE; there are some other minor differences, but functionally, you won't see them.

> Are the connectors different????

No.

> What software is needed ???

Same old software. IOW, something that DIDN'T come from Micro$loth.

> Speeds? Experiences ....????

Slightly faster than IDE in most case because the data is packed tighter. A true PITA if anything goes wrong, but otherwise, just like any other HDD.

You can use it for a paperweight. The parallel interface will not work with the Atari. Ther are no drivers available, and the signals are in some cases non-existant. Get a SCSI interface, or use Ghostlink and a 386 box as a slave drive.

STiK's internal dialer cannot do this. However, an external Dialer with a
lot more features does this too and is almost ready for release. The
Dialer will be part of the next STiK release, to be scheduled in a couple
of months.

Cheers Peter

: h> I research the adress of the parallele port for the 520 ste.
: h> Please, if you know this adress send me in France.

: Hmm ... the MFP is mapped from FFFA00 to FFFA2E. Do you REALLY want to fiddle
: with the hardware interface? You can do most things using the low level
: operating system calls.

But the parallel port isn't on the MFP is it? I understood it to be on the
sound chip. That is mapped on $FF8800 and the port you want is port B
(according to an ancient copy of 'The Anatomy of the Atari ST').
The strobe output is taken from bit 5 of port A of the sound chip, whilst
the busy input comes into the MFP timer A input (if I've read it correctly).
The O/S call XBIOS 28 (giaccess) would appear to give you access to the
sound chip without going direct to the hardware.

Looking at it, it could be tricky as the sound chip also controls the floppy,
so if you muck it up then you could trash the disk in the drive at that moment
in time. I'd tend to agree with Roger, use the OS rather than going directly
to the hardware, that way it should (fingers crossed) be compatible on all
platforms. (Have a look at GEMDOS $05 (Printer Output), $11 (PRTOUT STAT),
BIOS $01 (bconstat), $02 (conin), $03 (bconout), $08 (bcostat) to name a few
as long as this book has got them right!)

157. Star SG-10 printer: Driver For Win95?

Newsgroup: comp.sys.atari.st
Date: 1996-10-03 00:00:00 UTC

>
>I used one briefly. You have one big advantage, though, Bob - most of us go ape
>listening to that thing work. Sounds like a circular saw going through a bucket
>of ball bearings!

This is just the reason I got on this newsgroup. I, too, have a Star Micronics SG-10 printer. "Workhorse" is the exact word I use for it, too.

But I have two computers. My Atari ST, of course, and a newfangled 120Mhz MSdossey thing with Windows 95.

My problem is this: I can't get the Star to print with my new system. After searching the internet, I found several "solutions" posted to use another printer's driver and adjust the micro switches on the SG-10 to compensate. ABSOULTELY NONE OF THESE SOLUTIONS WORKED!! Usually the ribbion jumps off the printhead!

I want to use the SG-10 in my Windows 95 environment to print labels: The labels are cheap, the ribbons are cheap, and I don't think the Post Office gives a care if I'm printing with caveman 9-pin technology.

I've been told you can't use a SG-10 with Windows 95 because the computer output is too fast for the printer. I've been told that it is impossible to make a driver that will work.

Has anyone been able to use their SG-10 in a Windows 95 enviornment? If so, how?

Sorry to post a Win95 question on an Atari newsgroup, but I've used Ataris for many years and know that Atari enthusiasts are a "never say die" and "impossible, well that will take a little longer" breed. Hopefully some others have been forced into the MS Dos world like I have and have the answer I need.

Thanks in advance!

.....Rocky Willson

159. Let's have some animation in CAB :)

Newsgroup: comp.sys.atari.st
Date: 1996-10-03 00:00:00 UTC
From: gary@the-gap.demon.co.uk
Message-ID: <66092681_000003_OASIS_NEWS@the-gap.demon.co.uk>
Source record: 136477

I recently mailed Alex and asked him if he was going to put in the following into CAB; Animated GIFs and the MARQUEE tag. He said 'maybe'!!

If like me you're fed up with viewing static pages on the Atari and then seeing them all lovely and animated on PC's, then vote here for Animated GIF support and the MARQUEE tag.

The more people that ask for it (in here, I'm not suggesting you suddenly bombard Alex with email<G>), then hopefully he'll put it in :)

Animated GIFs allow simple animation (GIFs can hold more than one image and they get swapped, thus animated). The marquee tag allows scrolling headers etc.

Vote now for an animated CAB <g>

Gary.

>it such as Emagic's Logic. I don't have much information on the Yamaha

In theory, yes. But you won't do it with Logic. Logic Audio won't run on
anything other than a Falcon (I've tried it... :)
And only the newer versions of Logic Audio have CBX code, and these
versions never made it on to the Falcon platform. I asked at one point
whether there would be an Atari Logic Audio that would run CBX's on
non-Falcon Atari's, and the answer was short: "No". The development
effort in response to the Atari platform just isn't worth it. Still, it
would've been nice...

161. HELP!!! Major Problem

Newsgroup: comp.sys.atari.st
Date: 1996-10-03 00:00:00 UTC
From: raver187@telerama.lm.com
Message-ID: <531jc7$jhl@bosconian.lm.com>
Source record: 136479

I'm having a mjor problem. I am unable to boot from my hard drive because something is wrong with Neodesk which I have set to boot from my AUTO folder. I get a Reserved Memory Location error (11 bombs) or something like that. I cannot remove Neodesk from the auto folder because after I get the bombs the computer locks up. I'm using ICD boot with a Link 2. What I would like to do is abort the booting process before Neodesk starts loading from the AUTO folder. That way I can exit out and see what the problem is. As it stands now I am screwed. My ICD Utilities disk somehow got erased and the backup of it is corrupted. Woe is me. If you can think of a way to help, please email me at raver187@telerama.lm.com

162. Re: Dr.T&#65533;s Omega II MTC problem...

Newsgroup: comp.sys.atari.st
Date: 1996-10-03 00:00:00 UTC
From: fvuotto@laplaza.org
Message-ID: <531l5o$2s3@laplaza.org>
Source record: 136480

This is from memory (and I haven't used a BRC for a while):

Set the BRC to send MTC. Set the SMPTE offset in the KCS Mixer MPE MMC/MTC Setup dialogue to 00:01:00:00. Don't try to set the offset to 00:00:00:00 this won't work (and may be your problem). Enable MTC in the Track Play Enviroment dialogue. (While you're there, you may want to disable the Activity, Step and Min/Sec displays, the less the ST has to do, the better the sync).

Start the tape at 00:00:55:00 or so. When the tape reaches the 1 minute mark, KCS should start. Just be sure to start the tape a few seconds before the SMPTE offset in Mixer.

One funny thing is that KCS always plays an extra bar (a count I guess) before starting with MTC from the BRC, it doesn't do this with my Syncman box.

Hi, No Rich, only to complete the databse. and so far so good. A lot
of people didn't see it the first time or maybe they were on vacation
or whatever.

It's getting better, the more answers I have the more accurate it will
be. I just want to say that it will not be released in magazines or
anything like that, but it will be used to help
programmers/developpers to fulfill today's
atari user needs. The results will be given for free of course
to whoever wants it, you just have to ask.
Bye.

166. Re: ZIP ON ATARI

Newsgroup: comp.sys.atari.st
Date: 1996-10-03 00:00:00 UTC
From: mparrott@kendaco.telebyte.com
Message-ID: <5329jo$g80@kendaco.telebyte.com>
Source record: 136484

Unless having a ZIP drive for compatibility with some other project is absolutely necessary, go with the SyQuest EZ-135 instead of a ZIP drive. There are no SCSI incompatibilities requiring software updates as with the ZIP drive; the EZ-135 holds more data (128 Mb when formatted) per disk and is faster at both accessing and throughput. And the EZ-135's dark grey case better compliments Atari's grey components. :)

Toad Computers can get them for US$129.00 (though they were backordered last time I checked), or they can ordered directly from SyQuest for US$119.00. Look up the SyQuest web page for the toll-free number.

167. cab 141

Newsgroup: comp.sys.atari.st
Date: 1996-10-03 00:00:00 UTC
From: starship@3rdplanet.com
Message-ID: <558079415.7043.085.starship@3rdplanet.com>
Source record: 136485

I've tried to set up the new cab et al, and have managed to get
irc working, and cab kinda working, although I can't read any print
on the buttons. Just grey buttons. Hmmmm...

I tried the install program, but when it was done, I couldn't find the
cab app program. Hmmmm...

I suppose if the authors of the docs/programs would place in their
documentation a few lines on how to change over from the old program to the
new program, I could be up in no time. But, it's the same old thing again
and again. The programmers always worry about the docs last, and what is a
simple thing for them is always excruciatingly painful for us users.

Please, I really like the job you programmers are doing to get the programs
out to us, but If you could go one step further and EXPLAIN how exactly to
change from the old to the new you worked so hard on, it surely would help
not only US out, but would save YOU time from answering what I'm sure you
consider stooooopid questions from even stooooooopider users. Eh?

Don't worry though, I'll have all the bugs worked out in this setup in a few
days time, I'm sure.

Hello everyone in Atariland!!!

I have a little proposition that maybe some of you programmers out there would consider taking on as a little project. My fiancee lives in Tucson, AZ, whilst I live in Fresno, CA. Which means our phone bills have been outrageous, so we've had to reduce ourselves to only chatting over the internet, and use the phone only one in a while. This is really hard to do!!! Anyway, a friend of mine, who basically uses Mac and PC, said, "You know, they have software that will allow you to send your voice over the 'net!" So I was wondering, why don't we do something like that for Atari computers, too? I mean, the Falcon definitely has the hardware to do it, it's just a matter of getting the software written, I would assume. I own a Falcon, and if someone would be willing to take this on, I would definitely be willing to pay a reasonable fee, since I'm sure it would be much less than the bills I am currently faced with! It would have to be compatible to the PC versions, because she has a PC. PLEASE help if you can!!! Maybe make it work with STiK or something? This is just a suggestion! Thanks for any comments, questions, or takers on the idea!

How about a weekly posting of a list of new things, like the
Weekly Posting Of New ATARI Stuff from a.a.u.e?

My suggestion:

[Name of the program]
[Copyright notes]
[Download path 1]
[Download path 2]
[...]
[Short description]
[New in this version]

[next file]

The list should also be available on a web page and from a
mailing list.

Who is able to manage that?

Greetings,
Uwe.

Hallvard Tangeraas (hallvart@sn.no) wrote:

>It worked fine under X11, but how on earth do I make it work without X11?

Just let it run in a window. ;-) On a SingleTOS-based system (with underlying MiNT) you could use TOSWIN. This is an acc which can run *.tos and *.ttp applications in a window if MiNT is installed (in fact, you can open as many windows as GEM provides and as your memory allows).

In a multitasking GEM environment (with MiNT, i.e. MultiTOS, N.AES, oAESis(?), or XaAES) you can also use TOSWIN (in this case as an app as well). MultiTOS came with Miniwin.app which basically does the same job as TOSWIN. Personally, I prefer Miniwin because it supports Drag&Drop.

>I'm also interested in setting up the PPP system for Mintnet, as I want
>to try out CAB with my Internet provider's system

There's a quick guide on how to configure ppp included with the KGMD distribution. This guide is -- of course -- in German, but I could translate it into English. However, I don't know how far this guide is applicable to the TAF distribution which uses 8+3 file names (KGMD uses the original Unix-like long file names as you probably know).

Hi there!

Arthur Marshall (arthurm@zetnet.co.uk) wrote:
: Does anyone know of an Atari prog to help write Web pages? I've got a PC one
: which I run on ATONCE but I have to keep flipping back to CAB to make sure
: I've got it wrong. And there's no help files either and the guy who wrote it
: isn't at the shareware address. What an unusual story.

There isn't a dedicated HTML editor for the Atari yet AFAIK. The best
(only!) way to write pages on your Atari is with a text editor. This of
course means you will have to get a guide to HTML as a reference to the
syntax, or study some HTML pages you have downloaded to learn the lingo.
With CAB you can call a text editor from within CAB, so you don't need
to go quitting CAB everytime you need to change your HTML page...just
click on the SOURCE button and CAB will throw your HTML file into your
preferred text editor...

Hope this helps...

It would be so nice if someone at least semi-officially
associated with stik/cab would post a letter saying what's wrong and
when or how a fix will arrive!!! I can't use the new stik at all, and
the cab.ovl causes the dreaded runtime error 163 and 164 to appear.

I need an ethernet card to connect my TT to mac and PC using ethernet, I think I could also adapt tuw tcp-ip drivers to do this.

I would also be able to use the VME bus to use both my Crazy Dots 2 and the ethernet card, the TT is already in a Tower case, how should I extend the bus ? just flat cable and connectors ?

I have an expansion board with 4 1-MB SIPP RAM, how can I upgrade ? Do I need an ST-RAM board ?

Hi!

I installed the new CAB 1.41 and it works well.
But I have problems to use the old Hotlist.htm. I get bombs when I use
it.
Even if I try to create a new Hotlist.htm with the new CAB I get
bombs.

It seems that the new CAB don't like the file Hotlist.htm.

Is there a solution?

And what should it say in german? I have the german version of MagiC 5 you see.
Is there some decent documentation for MagiC 5 in english? The manual for MagiC 5
is even worser than the one for MagiC 4 and it doesn't say much about anything.

Hello...

I need to convert a few hundred files from my atari to Word6 for Windows (I know that the atari is better, but if i can do this my father will get me a nice pentium where i will have Linux runing with X)...

I am looking for a program that does this automaticly. I know that i can convert the text to plain ASCII, but i have one aditional problem, the documents are in Portuguese, and the only way to make Signum II print characters with accents (' ~ `) was to use the number pad, i edited the fonts and placed letters on the various numbers of the keypad, so the conversion program should have this in mind.....

Please HELP.....

> a) at all?
> b) up to 14MB or even more, e.g. 32MB?
> c) (What's the max. memory you can plug into an FX?)

I have no idea. For now I think you can have up to 16MB.

> 3. What screen resolution does the FX deliver?

Not sure, but I think you can get 640x400 in TC and some silly res
in 16 colours and nice res in 256 colours.

> 4. If I want to do 1024x768, is a so called "VGA monitor" enough, or
> only a "Super VGA monitor", or do I need a multisync monitor?

You will need a SVGA or multisync.

> 5. What alternatives are there
> a) to satisfy all of the above requirements A-C?

You better get a Nemesis as it will give you a bus at 24MHz and is
said to be very stable. You can even use 30MHz bus on some falcons.
You will not get more RAM than 14 MB but it's much cheaper than the
FX (around 1/4 of the price) and you will probably be able to use
the Nemesis together with the fastRAM card called Magnun to get
more and faster memory as well. It will still be cheaper than the
FX-card.

If you get the Nemesis you will be able to get these res in truecolour
on a regular VGA.

Bus CPU Video Hz
640x480 24 24 24 60
720x528 24 24 24 50

> b) to satisfy requirement A and B (memory and resolution,
> maybe two separate expansions)?

The Magnum card + Nemesis or BlowUp/ScreenBlaster.

> c) to satisfy requirement A (a pure memory expansion)?

Magnum card or a regular falcon memory upgrade (16MB).

I presume you mean the graphics?...nagh you don't have to see the
actual picture, you could place a box where the picture goes, this
would allow you to set out the page?,

>From a STOS programming standpoint, the program I envision would run in a
>GEM window, so that would be a really neat trick if you could do it with
>STOS. I guess it wouldn't have to run in a GEM window, but I would want

why ?..... why would it have to run in a gem window, if you run CAB,
then select run prg, why would it need to be in a gem window, you can
have windows with scroll bars that will scroll your text and
pictures?? etc without gem you know <smile> I have a displayer that
displays pictures, different fonts, colored fonts etc, and all scrolls
a lot smoother than any html displayer i have seen,

>to run it under Geneva, without having to change from my default
>resolution, etc...

dunno anything about geneva....as stos would leave gem, it can go to
whatever resolution it wants, on exiting back to CAB it would restore
the environment,

>On the other hand, I, personally, am happy enough using a text editor and
>checking my work in CAB. Even when I'm at work on my PC I avoid those

Same here...although I have been lazy now and again and been tempted
to use the built in editor in netscape gold...but for the most part
its notepad.....comes from learning html on atari cab/everest, its a
habit to do it by hand now :)

>: To be honest, a bloody good "Idiots guide to making web pages on (and

Hello,

I know 2 ways to do that, but only for the text, not for graphics; if you
have graphics in yours files, save them out these files.
first way:
- create a macro to tranlate the accentuated letters into non
accentuated letters. I use, for example, e| for e', e|| for e`, ...
You need to use groups of letters nether used before (it's why I used |)
- execute the macro and save the file in ascii
- open the file in word and with search and replace, make the
reverse translation.

second way (only if you have "le redacteur"):
- save directly (in Signum) in ascii, and import in "le
redacteur".
- from "le redacteur", export for word

"Le redacteur" is a french word processing

197. Software For Sale

Newsgroup: comp.sys.atari.st
Date: 1996-10-03 00:00:00 UTC
From: awatson@pacifier.com
Message-ID: <530lq6$5ol@news.pacifier.com>
Source record: 136543

Announcing the:

Mountain Software Shareware Bundle
==================================

As I posted a few weeks ago, I have reduced the price of my shareware programs to only $10 each. These include:

1. Easy Base..... Simple Database Program
2. Easy Go..... Easy to use program launcher
3. Easy Money..... Basic address book/financial planner
4. Learn My Numbers.. Educational game teaches numbers 0-9
5. Manualizer..... Prints any text file in booklet form
6. Mountain View..... A really handy text viewer
7. Movies at Night... Animated screensaver system
8. Pen Pal..... An easy to use text editor
9. Tuzzle..... A fun sliding tile puzzle game

However, I realize the Atari market isn't what it used to be, and even $10 may be more than you want to spend for a single Atari program. So, in an effort to continue supporting the Atari community that supported my work for so long, I am offering a special package price on all of my Atari shareware products.

Simply send me a check or money order for $25 in US Funds and ask for the "Mountain Software Shareware Bundle". I'll send you registered copies of all NINE programs listed above. Even at the recently discounted prices thats a $90 value!

If you only want one program, that's fine, you can still order them separately for just $10 each. But, this is an incredible deal on some great software!

Thank you again for all your support!

Anthony Watson

Ii¿½ve only tried with an ADAT/BRC combo, where the BRC remote transmits the MTC throught its MIDI out. Ii¿½ve previously used this system with a Mac (not mine :) with no problems. The MIDI clock works fine, but then I have to make a tempo map on BRC, what isnï¿½t so nice.

>Unless there is some problem in my auto folder setup I'm beginning to
>believe that NVDI is the problem.

Do check the auto folder programs first. I use NVDI v4.10 on a Falcon myself and there are no problems at all. So, I'd first disable all auto folder programs except the really necessary ones.

Also, there may be problems with the FX card you seem to have installed. If there's alternate RAM on this card, try to set NVDI's program flags to use ST RAM only (no alternate RAM). There could be transfer problems from the alternate RAM to the printer port -- who knows.

>I don't seem to have this file (Selectric CPX.) Should it have been in
>the archive?

I believe so. I've de-installed Selectric v1.10 (no long file names) but IIRC the archive did contain the CPX.

Don't know - sorry.

> Q1b: Is there software available to write audio-CD's with a Falcon?

Yes. From SoundPool in germany.

> Q2 : Can ZIP-drives (i.e. Syquest) be used with a Falcon?

Yes. There exists tools for ZIP-drives for all Atari's with SCSI.

A Syquest EZ-drive can be connected directly to the SCSI port of the Falcon,
it works with almost any harddisk driver around except the old AHDI.

> So, with this in mind...what's a good quality/low priced 15"
> monitor for the Falcon standard modes?

Well almost any kind of SVGA-compatible monitor. But I'll recommend that
you buy a multiscan type SVGA monitor to be able to run as many screenmodes
as possible.

> Does the Falcon go to 1024X768? (without extra hardware)

No, you'll need at least a simple hardware add-on like a ScreenBlaster,
BlowUP030 or similar that connects between the monitor-port and the monitor.

You can propably reach about 900x700 in 2 colors and 800x600 in 16 colors
without a hardware add-on.

You'll need a BUS-accelerator like the NEMESIS from Titan Designs to achieve
higher 256-color and TrueColor modes in SVGA-mode.

> Does the Falcon go to 1280X1024? (without extra hardware)

Same thing here as above.

> (especially the audio part).

Cubase Audio can only run on the Falcon and 100% compatibles.
No is no way to make it work on the MegaSTe.

This is because Cubase Audio uses the DSP of the Falcon and it also
needs a lot af Audio power which the MegaSTe doesn't have.

Source record: 136551

Sorry to be the bearer of bad news, but there is no way to do that! The Atari parallel port is meant for the printer only and lacks some of he lines necessary for all the stuff that the PC uses it for because they don't have scsi interfaces! The Zip scsi drive works just fine on both machines, only you have to get a scsi interface for the PC! But, at least it is possible and not too expensive this way!

On 3 Oct 1996, Gustavo Felisberto wrote:

UH> I just released alvi 0.05beta.
UH>
UH> Have a look at http://www.sax.de/~haase/atari.html

I don't have Web access currently, unfortunately.

UH> alvi (Alkor JPEG-Viewer) is a very special JPEG viewer.
UH> It can handle large JPEGs with a very small need for RAM.
UH> The display of the current version is only monochrome.

How does the display compare with MJPEG? That's what I'm using now, because of its excellent display and relative fast speed, and rarely (if ever) run into memory problems (using 4 megs on an STe).

208. Cool Freeware Role Playing Adventure

Newsgroup: comp.sys.atari.st
Date: 1996-10-03 00:00:00 UTC
From: bhao@s07.informatik.uni-bremen.de
Message-ID: <531355$4v5@kohl.informatik.uni-bremen.de>
Source record: 136554

Hi

I have a role playing game I wrote in gfa-basic. I think the game
is quite good (really cool story) and I would like to upload or post
it somewhere.

Does anyone know a place where I should put it so that _a lot_ of
people find it?

I don't have access to a compiler, so to play, one needs gfa-basic, but
since that's commercial software I can't include it. If I remember
correctly, there is a gfa-basic program, which lets you run the program
but not edit it, and I think that might be freeware. Can anyone confirm
if this is so, and if so, can anyone tell me where I can get it or
email me the program.

What kind of archiving/compression utility should I use? (zip/zoo/lha/arj)

Thanks for any help!

Stefan Wichmann

Check out my Enhanced Joystick Ports FAQ:-

http://www.compsoc.man.ac.uk/~xav

Then go to the Atari section.

At the moment only version 0.80 is posted there, but I have finished version 0.90. If anyone wants this (in ASCII) then mail me at mbge4mdc@fs1.ee.man.ac.uk

I'm currently in the process of converting version 0.90 into ST-Guide format, which not only makes it easier to find the information you want, but also allows me to include "proper" diagrams. And the final file is smaller ;)

Version 0.90 contains a fairly comprehensive list of games and demos that use the EJPs, as well as constructional and programming details. It also covers things like rotary controllers (as usable on Tempest 2000) and Team Taps. Version 1.00 will also cover light pens and other stuff.

I hope to have the ST-Guide version of 0.90 finished in the next few weeks.

>> Now Which ones..? :)
>
> SubStation

It's in the FAQ!!! But it's not a driver, it's a _very_ simple adaptor which allows you to use Joypads in a "normal" joystick port. I also covered it in an article for the first issue of Atari Computing.

Incidentally, at the recent Birminham show, Best Electronics were selling a lead to do the same job for 11 pounds - the part for mine cost under 4!

Cheers,

Xav

Source record: 136412

Hi, since a lot of ppl were having problem with the new CAB.OVL 1.20
Flinny put the latest one 1 or 2 days ago. Finnaly it works. But a
strange thing appened. If I have atarirc loaded as an accessory(under
single TOS), it works but Cab will not show some of the pictures !!!
I was like "hmmmm I didn't know that I changed something in my page.."
But I verified the html with an editor and it was like I left it
before, and the pictures were unchanged too.
It was weird, then I tried to reboot but without ATARIRC, and now the
page show up entirely, no problemo.. heheh..cool..
Did anyone experience this before?
Thanks to the WWW programer anyway, it's a really cool project...

Could well be the battery if it is VERY low (less than 0.5v).

I don't know the clock model but most have a small trimmer which can be set
with a fine screwdriver. If the battery is OK then look for the trimmer -at a
guess it will need turning clockwise to spped up.

DTP, Internet, Word processing and Programming.

> -what do you consider the best shareware:

GemView, MPlayer, Everest, LED, CAB, Kandinsky, CLA, OCR and lots of others I don't remember
by name.

> -what would you like to have on your atari:

More games for the Falcon preferably on CD-ROM,
a decent PostScript importer/exporter that works
properly on all setups,
Mjoelner BETA language,
proper non-MiNT C++ implementation,
more support for object orientated programming in general,
better compatibility support for enhanced machines like
AfterBurner040-Falcon's and machines
with external graphics cards (this also goes for games),
a good (and cheap) EtherNet-adaptor for Atari's would be nice,
an Excel compatible spreadsheet and better software support
for Atari clones like Medusa T40/T60 and Hades040/060

Phew! I guess that was some of my wishes :-)

> -What program would you like to buy if it was better than it is:

The programs existing on the Atari at the moment are good as they
are, there are just missing some certain category of programs, just
look at my wish-list above.

> -What's your name:

Henrik Lunardi Weide

> -how long have you been using your atari:

I had an STe since 1989 and I bought a Falcon in the summer of 1993.

So this makes all-in-all about 7 years.

> COMMENTS:

I wish Jack Tramiel could sign the last papers to free up any
copyright Atari might have on TOS and the machine architecture, so
that some proper Falcon-clones could be released.

Or is it just WizzTronics that makes wapourware once again ?

With other words. Completely useless. :-)
Why would I get a thing like this? A VCR is still much better as you can't
use any cool software on the Atari to make use of it, except viewing some
rare mpeg movies.

> e> Anyway, it does sound cool. :-)

Well, good luck to them, but I would still prefer to see that they put down
some effort to develop Lattice C insteed of this toy.

Yeah, I've always noticed that pages can look different depending on what I have loaded. I think CAB will omit some graphics if it runs out of memory. Just a theory though.

That's due to a lack of RAM. When CAB can't get enough memory to decompress a
picture, it should just show an [IMAGE] tage instead - that's what I usually
see on my bog-standard 1040ST. The 2 meg machine not only shows the graphics,
it even shows background images - but only if STiK and CAB are the /only/
things loaded.

If you have access, UUencode it to alt.binaries.atari

Also, if you have access to a NeST or AtariNet BBS locally, you could upload
it there with a netmail to the sysop asking him if it could be hatched into
the file network.

>What kind of archiving/compression utility should I use? (zip/zoo/lha/arj)

Unless it requires long filenames (e.g., unless it wants MiniXfs to run), use
Zip - everyone (that is, all platforms) has Zip and everyone can use it. LHA
would be the second choice. Zoo is not only not required for any standard 8.3
filename system, it's a PITA to use without a good shell, and most people
don't have the shell (although they could get it easily enough).

That sounds like a MicroSoft answer. It's wrong.

>Has anyone been able to use their SG-10 in a Windows 95 enviornment?
>If so, how?

I don't have an SG-10 now, but... First thing is look for the oldest printer
that Win95 actually does support; let me see what's on this CD... I would
try the "Epson Compatible 9-pin" or possibly the "Generic/Text only"
driver(s).

As for the ribbon jumping off the head, that sounds like an alignment problem
rather than a software problem. Look for bits of paper in the ribbon guides
or something equally innocuous-seeming.

Hi David.
Seeing your posting here reminded me of your similar request in
rec.autos.simulators. I posted there saying I knew of a couple of
disk hacks you could perform.
I dug out some old scraps of paper with some stuff on you might be
interested in.

With a disk editor (Knife-ST, DiskMech etc.) go to track 32 (0 is the
first) sector 8 (1 being the 1st) on side 0 (A) of Disk 2. You should
see the following (in Hex):

0A 03 02 0F....

from position 12 (hex) you will see:

02CC 02A4 02CC 028A.... ending in.... 0267 0000 0000

That block of data is car performance. Each word (eg 02CC) is the
engine power of each team. The order is the numeric order of the
teams in the game. McLaren (being no.1 & 2), Tyrrell (3&4), Williams
(5&6), Brabham, Footwork, Lotus etc. So the Williams and McLaren
have the same power (02CC). Try uping the values slightly. If you
over do it the game will act weird. IIRC the cars will end up going
more slowly. Geoff Crammond's games do seem to have limits on the
values. I remember a having a massively more powerful car in Revs,
Geoff's F3 simulator for the BBC & C64, once a certain top speed was
reached, a value impossible in normal situations, the car would start
going backwards very quickly.

The next block of data from address 3A to 61 is the driver
performance in qualifying one byte per driver. The first value is
for the number one car (Senna). The value is 01. This means that
Senna is the best driver. How it works is that a random number is
generated at the begining of each practise/qualifying/race, and
probably each time a driver goes out of the pits. This number
combined with the value from the table gives a driver performance
value. The number is then subtracted from the engine power in the
first block of data. This means that a driver can have good and bad

'days'. If the random value is high then more power will be taken away from engine and therefore slow him down. Conversely a low random number means a high power engine. Senna's number one performance value means that he is less likely to be affected by power reduction than his team mate (Berger) who has the second value in the table (4). Notice the 13th value in the table is 00 because there is no car number 13.

A table almost identical the qualifying performance appears directly afterwards (position 62 to 89). This is racing performance. The most noticeable change is that Mansell and Patrase have swapped abilities. Patrese is more likely (dependant on the random value) to be the better qualifier but Mansell is more likely to be the better racer.

I had better stick the normal disclaimer in here. Do NOT edit your original F1GP disks, and if it all goes horribly Pete Tong then don't blame me.

My brother did alot hacking on F1GP and he worked out alot of how it works, including the structure of the track data. He actually worked out the track data from just print outs of the data and some pictures of maps from a magazine!
I cannot give you anything more info than this. I only know about this because I fiddled with the car speed to make the game more difficult for me and it is one of the few pieces of paper I can make any sense of.

I hope this helps alittle.

Sadly no real editors appeared like the ones on the Amiga/PC primarily because the disks are protected and are not harddisk installable.

Rich.

>That sounds like a MicroSoft answer. It's wrong.

Actually MS's answer was to publish a few different scenarios of using drivers installed in Win95 and setting the dip switches on the SG-10. This was in their on-line help "Knowledge Base". Of course they had more disclaimers than Carter has little liver pills at the bottom of this sage advice. Actually there was just about as much disclamer as advice.

Anyway, when I tried their suggestions, the SG-10 ribbon jumped off the track on all scenarios that I tried. The print head was jumping so fiercely, that it looked like it was going to fry the SG-10, so I turned it off pronto. One thing was for shure, it wasn't going to print my labels. It would overstike the same line about ten times before going to the next line of the label. So much for MS advice.

>
>>Has anyone been able to use their SG-10 in a Windows 95 enviornment?
>>If so, how?

>
>I don't have an SG-10 now, but... First thing is look for the oldest printer

I haven't tried the shotgun approach yet, but I will eventually. I will probably try to print to an ascii file and use 1st Word to print the labels first, though.

I thought along the same lines, but the printer still works fine with my Atari STE.

242. U.S. Dealers that buy ST equipment?

Newsgroup: comp.sys.atari.st
Date: 1996-10-04 00:00:00 UTC
From: jason@fatboy.larc.nasa.gov
Message-ID: <lwafu234fs.fsf@fatboy.larc.nasa.gov>
Source record: 136438

I've got an original 1040ST in my closet along with a
monochrome and color monitor. All the parts were fully function last
time I switched them on. I would hate to just throw this stuff away.
Are there any dealers in U.S. that buy and sell this equipment?

Try looking for amiga (ugh!) ones. My optical mouse has a switch which
toggles between atari and amiga modes. This in mind, it should be
possible to rewire an unswitchable amiga mouse anyway.

Hey, I wouldn't mind seeing that on an Atari :)

It'll have to be up to the programmer to even try to make it work on the
ST. But it would be even nicer to try to run Java applets! Till then,
just put small Atari ST programs on the web page and when you download
them CAB can run them.

Not bad, eh? :)

249. Re: Star SG-10 printer: Driver For Win95?

Newsgroup: comp.sys.atari.st
Date: 1996-10-04 00:00:00 UTC
From: rsg0910@iglou.com
Message-ID: <Dyrr9y.9sy@iglou.com>
Source record: 136445

Rocky Willson (rockywi@ix.netcom.com) wrote:

: My problem is this: I can't get the Star to print with my new system.
: After searching the internet, I found several "solutions" posted to use
: another printer's driver and adjust the micro switches on the SG-10 to
: compensate. ABSOULTELY NONE OF THESE SOLUTIONS WORKED!! Usually the
: ribbion jumps off the printhead!

Why the ribbon jumps off, I don't know why. However, I've had it do that to me as well. Simply make sure the spools are on correctly and run through the correct places. That works real well for me. If for some reason the ribbon jams in the head, no matter what, do not attempt to rip out the ribbon from the head. You will bend the pins. Happened to me and I had to get a new head. They're difficult to find. The SG10X and SG10 printers are essentially similar, with some differences. I'm not sure what the differences are, other than appearance and the dust cover. I'm about to receive a used SG10, so I'll see what they are.

: I want to use the SG-10 in my Windows 95 environment to print labels:
: The labels are cheap, the ribbons are cheap, and I don't think the Post
: Office gives a care if I'm printing with caveman 9-pin technology.

They usually don't, as long as it's readable. I still see the occasional 9-pin printed label on my mail.

: I've been told you can't use a SG-10 with Windows 95 because the
: computer output is too fast for the printer. I've been told that it is
: impossible to make a driver that will work.

Yes, it's true. To get it to work, you have to turn off turbo on the computer. Most of the time, doing a CTRL-ALT-minus/plus key combo will turn it off/on. That's when you can print. When I upgraded from a 386DX-40 to a DX4-100, it drove me nuts, til I figured it out. It caused the little READY light to turn off, and a linefeed. To reset, I had to turn it off and back on. Certain programs would print beautifully without having to turn off turbo. So far, that's a minor annoyance.

: Sorry to post a Win95 question on an Atari newsgroup, but I've used
: Ataris for many years and know that Atari enthusiasts are a "never say
: die" and "impossible, well that will take a little longer" breed.
: Hopefully some others have been forced into the MS Dos world like I
: have and have the answer I need.

I don't use Win95, due to all the bugs and horror stories I've heard, and I've still got Win 3.1 on the 486. I still do use the ST for running a BBS and programming, and the 486 for other personal things. I alternate between the two. I started on the 8bits, and still have some regular 8bit

stuff that I've not used for awhile, but will be using again. They can take a phenomenal amount of abuse before they decide to go to sleep for the final time, if at all.

I don't know if Toad still handles used STs or not, but post an ad here -
someone will almost certainly offer you something for it! If I didn't have to
sell some hard drives to come up with the cash for a new Internet account, I'd
offer something for that color monitor myself.

I'm working on getting Instant Graphics to recompile - when I can do that, I
can modify it to play with CAB and we'll have our own "ST proprietary"
internet graphics/animation format.

I need GIST, though - does anyone have that still?

Wow, I picked up yet another Atari SM-124 monochrome monitor today.
Normally I've been able to find them freaquently at the Goodwill for $10,
but today I lucked out and found one at the Salvation Army for $5.

I picked up a greyscale VGA monitor at the Goodwill the other week for
$10 and it was easily converted to run as an Atari monochrome. As well I
got a Commodore 1802 Monitor at the Goodwill for $10. I'll use it with
the Video-Key to run one of my 1040STs on.

What A great time to be alive. I've been getting Atari ST computers and
monitors at the thrift stores for $5-$10 each. Now, finally, I've got a
working monitor for each Atari ST I've picked up.

I've been seeing a lot of colour monitors too, but all of them have been
suffering from the same thing that killed mine (dead flyback transformer).
I take it that's a common problem with the Atari colour monitors.

I wonder if I'd be able to use the transformer from an old TTL monitor to
hack a replacement (even if it means building a new case for the monitor).
Anyone ever try this?

CRACKERS
(Monitors everywhere from hell!!)

Ethernet cards are _very_ scarce in the Atari world. There were several
kinds made in Germany at one time, but are no longer, and understandably,
their owners don't want to give them up :) There is a company which is
planning to market one. See below.
: I would also be able to use the VME bus to use both my Crazy Dots 2 and the
: ethernet card, the TT is already in a Tower case, how should I extend the bus
: ? just flat cable and connectors ?
I don't know if this is possible, so I'm interested in the answer as
well. It may not be necessary. Check out the page at
http://members.aol.com/NorWiecz
for (scant) information on a 10MBit/s Ethernet interface for all Atari's.
: I have an expansion board with 4 1-MB SIPP RAM, how can I upgrade ? Do I need
: an ST-RAM board ?
You can upgrade with an ST RAM board, but you don't have to. I have a
text file, written by Dennis Armstrong, which describes how you can
upgrade your TT RAM board. I'm planning to do the upgrade as soon as I
find a good source for 30 pin 4 meg SIMMs. I'll mail it to you.

Vincent Bakker wrote this to All about CAF FAQ anywhere?:
VB> subject says all

I don't know if there is a FAQ around somewhere, but if you'd like it, I can
send you a small info package I've put together, including some small tips
about how to make CAF work in the best possible way -as well as some pictures
of clock modifications and description of true -10dB line levels in/out.
I'll send it as a couple of uuencoded e-mails, so you need ESSCODE to decode
it...
You can also join the cubase-users mailing list like this:
send an e-mail to Majordomo@mcc.ac.uk with no subject and the following
contents: subscribe cubase-users your.email@address
After a couple of days you'll recieve a bunch of letters each day. For the
moment there's most talk about problems with PC and Mac version, but an
occasional CAF question pops up now and then - and you can ask about things you
need to know and there'll probably be an answer quite soon...
You can also ask me and I'll do my best to give meaningful answers...

Best regards,

Claes

Source record: 136456
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech,demon.ip.support.atari

Help,

I have a Toshiba XM5401 SCSI CD-ROM fitted to my TT and it runs fine
with ExtenDos 2.4 under TOS 3.05 with all CDs.

My problem starts when I try to boot up under Magic. ExtenDos
reports the error 'Device is not CD-ROM'. The normal boot sequence then
continues for NVDI etc, but MagDesk then locks up with either a green
desktop minus icons and menu, or a totally white screen with only the mouse.
This problem occurs whether the CD drive is empty or has any type of CD
in it.

HELP.

Has anyone experienced the same problem? Does anyone know of a cure?

Thanks in advance.

PRESS RELEASE

FACE VALUE - "Visual GFA basic" for TOS computers

Visual GFA programming is now a reality. As the first GEM program generator for GFA Basic, Face Value will create fully featured, solid, multitasking friendly programs almost at a click of the mouse. It will revolutionize GFA programming. Now you can devote your programming time to the task you set out to solve, and not spend weeks - or even months - on creating a modern GEM interface yourself. Face Value will do that for you.

How do you work with Face Value?
~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~
The program design is done in a resource-editor. Here you decide how the program will be presented to the user. Face Value will then load the RSC-file and write a complete, ready-to-run, solid GEM-program LST file. All you have to do is merge your own routines, and "connect" them to the Face Value-written code. This is easy to do thanks to Face Values well commented source code. The development time for your programs will be radically reduced, and as a lot of effort has gone into ease of use, even relatively inexperienced GFA programmers can now create first class, professional GEM programs.

Some features of the program:

* Windows with toolbars or toolstrips
(as seen in modern document processors or paint programs)
* Menu bars in windows
(Toolbox windows that will work in the background)
* Modal and non-modal dialog windows
* Animated icons (even with samples)
* Animated mouse pointers
* Realtime scrolling popup listboxes
(radio-, check- or menu listboxes)
* Radio- and menu image popups
* Multiline radiobuttons (round) and checkboxes
* Windowed progress indicator or animated busy-dialog
* Number scrollers for numerical values
* Switchable Menu bars with automatic shortcuts
* User windows with graphics or text (or both)
* Custom desktop that can be installed/deinstalled "on the fly"
* Alerts in windows - with standard, custom or animated icons
* Iconification on all systems
* Can run as accessory, just rename to *.ACC
* Intelligent ST-Guide support (context sensitive calls to
~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~

ST-Guide, automatic generation of ST-Guide sources for
documentation of the menu bars and dialogs)

You can also pick & choose from Face Value's expandable library:

* Fontselector support (xFSL)
* Full Selectric support
* Drag & drop support
* GEM clipboard support
* GDOS (all types) support
* Command line support
* Off screen bitmap support (with eDVI/NVDI 2.5+)
* Load & save IMG
* and more...

What are people Saying?
~~~~~~~~~~~~~~~~~~~~~~
"ST Format seal of approval - 90%" (august 96): "If you want to give
your GFA Basic programs real 1990s interfaces, then Face Value is a
must." - 90%

ST Computer: 5 of 5 mice! (january 96):"Face Value - das ist eine
Revolution furGFA-Basic-Benutzer....Und die ist jede Mark wert." - 5
out of 5 mice. (high points for those of us lacking German language
skills: 5 of 5 rating, A Revolution)

What do I get?
~~~~~~~~~~~~~~
The program and detailed reference are in English, and are supplied
with a printed English introduction,. The reference and documentation
is in ST-Guide format. Example programs are included. The on-line help
System ST-Guide is included on a second disk. You must supply GFA
interpreter 3.5 or 3.6 and a resource construction set (ie. RCS2, ORCS
or INTERFACE) these programs are NOT included with Face Value.

How do I get my copy?
~~~~~~~~~~~~~~~~~~~~
The North American Version of Face Value is distributed by Systems For
Tomorrow, with Technical support provided by our new software
division: Kordes Development. The North American version of Face
Value is available NOW for only $69.99. Dealer Inquiries invited.

To Order, call (800)875-4943 (US/Canada Orders Only) or
(816)833-4738. Or send E-Mail to sft@sound.net.

In Europe contact: Columbus Soft at 0049-6151-94383-0

I started writing a HTML-editor. It's far from finished, and I don't
know when I'll find some time to continue working on it. I hope soon.
You can download the basic version (don't know if I already can call it
that way) from my homepage (enter the ftp-server from there).

Vincent Bakker wrote this to All about Falcon WORMs and ZIPdrives?:
VB> Q1a: Is there software available to use WORM with a Falcon?

I haven't seen anything, so I guess not :(

VB> Q1b: Is there software available to write audio-CD's with a
VB> Falcon?

No problem at all :)
I use CDRecorder Pro 2.0 from SoundPool and it works very well.
It supports the most common CD-writers.

VB> Q2 : Can ZIP-drives (i.e. Syquest) be used with a
VB> Falcon?

I use an IOmega Zip-drive and I know some people that use the Syquest EZ-135.
They both work fine. You don't need any special programs to run them - they
behave just like normal exchangable hard disks. If you want to use password and
write protection on the Zip drive, you need HDDriver, as these functions are
built into the driver software. Other drivers (like AHDI) don't have this, but
require separate software (Zip/Jaz tools from Oregon Research) for these
funtions.

Best regards,

Claes

And it DOES work! The only problem I now have is that cab_jpeg.ovl,
which worked fine in 1.31, doesn't seem to yet in 1.41. But I may be
wrong. I occasionally am!

From: bjr@edison.ebicom.net
Message-ID: <53287v$dps@einstein.ebicom.net>
Source record: 136502

Organization: EbiCom.Net
Distribution:

I prefer using a text editor for the actual mark up scripts.

I would very much like to see a simple program for quickly making
image maps however. Ya-know...click in a few rubber band boxes...hit
a key, and save your image map to disk. It'd be cool if it supported
both CIS image maps, and client side ones. It wouldn't matter if it
were gem or not...so long as it could be used along side the text editor
in a task switching capable environment (geneva, magic, mtos, etc).

Something else I thought would be cool...
If maybe a program could be written that would change Page Stream,
Calamus, and other popular document formats into html...
This would make a GREAT tool for putting books and stuff online.
To add refs, you'd load up a Page Stream doc...outline the object or
text, and a dialog could pop up asking for the link info.
In using this approach...there would be no need to make a very complicated
front end GUI with all the page creating functions that most people
already have in some program or another anyway. In fact...one could
bypass GEM all-together in early versions.

Any takers?

With the Atari the difference between IDE and EIDE doesn't matter. You
can connect an EIDE drive as well as an IDE drive.

There is no way to use the parallel version of the ZIP drive with the
Atari. Those who want to use a ZIP with the Atari and a PC need the SCSI
version.

The same procedure again, if you're only looking here:
(1) There's no (legal) way to break the boot-procedure in a MAC-like way. You can only boot from your internal harddisk or not, but not in single steps.
(2) But you can 'hide' your harddisk. Restart your ATARI while pressing any key (take blank-key). You'll reach a desktop without any icon refering to drives of your internal harddisk, but with an icon for your external disk-station. The cause is: your harddisk-driver won't be executed. That's the point, you should reach.
(3) Take your system-disk, named harddisk-utilities and start the external harddisk-driver. If you haven't anyone, try to get a new harddisk-driver.
(4) If your internal harddisk had been made known to the system by using the external called harddisk-driver, go to the menue and select the item, which checks in your drives. I'm very sorry, but i don't know the text of that item, because i'm using the german version.
(5) Now you'll get icons for each of your harddisk-drive, which you can open. On that way you can reorganize your auto-folder.
(6) For the future: use superboot (but use the manual too). It's freeware.

Greetings Karsten

Erm... PCSVIEW uses the same display routine as the Photochrome program itself. Are you sure you've done it right? Once you have converted the pic in Pchrome press S or RETURN to save. The resulting *.PCS should look exactly as it does in Photochrome. You should always convert to the highest possible mode. A *.PCS saved out from an STE (19,200 from 32,768 colours) will be automatically colour reduced by PCSVIEW when viewed on an STFM but stunning results are still possible. Are you using an STE or an STFM?

Also, there is an improved version called PCSVIEW2 which displays *.PCS pictures from the same directory.

YOW!

From: daymon@mammoth.psnw.com
Message-ID: <534amd$jt8@alpine.psnw.com>
Source record: 136361

Hello, people!

Well, I have a few things to comment on here. First, I'd like to say that it's awesome to have so many people devoted to the Atari-TOS world as these developers!!! You guys are doing a great job! Second, I ran into a little snag trying to install the new CAB. The install program just tells me, "Error #35" and then says "System out of memory" and then my system freezes up. Well, I have a 4 Mb Falcon, so a simple installation program shouldn't cause such a big memory problem, one would think. What's wrong? I've got all the stuff downloaded and ready to go. Unfortunately, no doc's or help came with the WWWI_100 program. So, can I use the setup program from WWW131? And lastly, this will be my last effort. If I can't get this new STiK to work with my ISP, I'm gonna have to give up on it. I've tried every suggestion given to me from here and from the CAB listserve with no result. I've had people come over and actually look at my setup and can find nothing wrong. I've given my files to my ISP to check, and he said it all looks good and is as confused as I am to why it doesn't work. He does have true SLIP, as well as CSLIP and PPP. But I'm paying more for the SLIP account than I would for a simple shell account, and being a college student who's engaged and saving for the wedding and other things, I really can't be paying that extra money right now. I guess maybe it just doesn't work with my ISP. :/ Very frustrating!!! It would be worth that extra cost if I could actually get this stuff to run. I've tried all versions of STiK (except this new one) and have tried to run MintNet (but I can't even figure out what the doc's are talking about with all their tech talk, not anything the average human being computer user can understand) but neither of these attempts have met with any measure of success. So in one final attempt after almost a full year of fighting with this stuff, here is one final description out of however many I've posted and sent (too many to count) or my problem that I've had with this stuff:

1. After getting everything set up and configuring my settings to the ISP's (MTU, DNS, etc.). I activate STiK. It connects, goes through the Login/Password process fine (SLIP account selection is done with the login, ie Sdaymon=SLIP, Cdaymon=CSLIP, and Pdaymon=PPP), gets the correct IP address (I've checked this with my ISP), and does basically all it's supposed to do.

2. I run CAB. While attempting to open a URL, it goes thru the resolving host fine and gets stuck at "Receiving data (0 bytes)" until CAB times out and gives me a blank page. It does this for all URLs I've tried.

3. I run Telnet, and after putting where I want to telnet to, it says that the connection is open, but it sits there and does nothing until I close the connection myself.

4. I run IRC, Finger, and AntMail, and all I get is Errors.

5. When I try to open a URL with CAB, wait for CAB to time out (our press ESC), exit without closing the connection, then run my terminal software, it promptly displays the HTML text for the URL I tried to access.

6. I have tried different settings in DEFAULT.CFG and DIAL.SCR for just about everything.

7. The DOMAIN.TXT file is loaded with info that could have only been known by my computer had STiK actually received something.

Ok. I'll now accept any suggestions you have and try them one last time. If it doesn't work, I am giving up on this and saving my money. I will certainly and gratefuly accept any questions or comments you have! Thank you for any info you have to give me! I can send you my files (minus the password of course) and the settings my ISP gave me if you'd need them to help.

It should work without Minix FS, the filenames just get truncated, AFAIK.

>AIUI you also have to edit/configure a lot of files with your IP addresses,

Actually, there are a few files where you put your hostname, DNS etc. But then
any internet software will need to know this information.

If you want PPP then yes, you need pppd.

The main problem is that much of the software available for MiNTNet is
ported from UNIX, and as such it needs a fuller UNIX style setup. This
makes things more complicated.

Also, for those who don't want to load a couple of configuration files into
a text editor and type in their hostname etc., I did see a GEM based setup
program for MiNTNet announced in c.s.a.s a while ago, I think it was meant
to be on a.a.u.e.

I didn't use the install script (in fact I did not realise there was one).
I just copied in the files by drag and drop on the desktop. I did not have
a shell or any other UNIX style things setup when I first installed MiNTNet.

WHA! You should be exporting them. There's a brisk business here (in the
Ottawa area) at around $70 ($50 US). External, as required by Atari.
Internal ones for PC's go cheaper (no case, no power supply, no cable needed)

I have an Atari Stacey I'm selling for Parts. It is one of the first ones that came off the Assembly Line, without batteries. It's Switching Power Supply has been tested and works fine. The Stacey Switching Power Supply can Run in the U.S. or Europe on 110 or 220 Volt. These Power Supplies Regularly sell for $100 U.S. The Stacey without the Power Supply goes for $175 U.S. Dollars. Stacey with Power Supply goes for $250 U.S. The Power Supply won't be available for sale until after the Stacey is sold, with or without it. It's a 4 MB Stacey with Hard Drive. Please direct all Replies Through E-Mail to: bensmith@teleport.com or call Ben at (503)256-9974.

Hi Michael, on 30 Sep 96 you wrote: ...respect, brethren

m>
m> Any new or updated hardware or software displayed?

16/32 - Jag+AvP @ 59.95ukp, Colour Lynx @ 29.95ukp - loads of games for each (more than I thought existed for the Jag tbh) + the JagCD etc

Portfolio Club UK - lots of hard-to-get hardware, originating from Atari's warehouse clearance

System Solutions - Hades 060 with Mach64 graphics card running on a 21" monitor with Steve Llewelyn of Calamus User demoing Calamus SL, HDDriver 6, Magic 5, Magic PC, Texel v1.10 (selling but not shipping yet - very soon though) plus all the regulars

Titan Designs/BSS - Nemesis, Apex Audio demo (very early stage of dev't), Apex 3 running at an astounding rate and more.

Atari Computing Group - new mag sold out at both venues before 2pm - only selling subscriptions thereafter, so get in early or don't get it at all <

HiSoft - Papyrus v4.25 in english and SMD-100 running TNG from videoCD all day long.

Sunrise Audio - rack mounted Falcons running CAF

UKAAUG/STAG/WAG user groups - Virtual Web site (entire sites packed onto a ZIP drive) for a day-long offline Web browse of all things Atari (excellent work from Chris Good of Wessex Atari Group and extremely popular), the All At Sea BBS live in Brum (modem breakdown days before prevented a demo of logging on from the adjacent terminal), user group advice and latest listings and al-round general software advice.

Falcon FacTT File/AtariPhile - demos of the AtariPhile 3 disk mag and the Web site and general advice from Colin and Kevin.

FaST Club - upgrades to software including Imagecopy v4.03CD - cheapies on the rest.

Floppyshop - Positive Image v1.1

The Maggie Team - latest issue running on an impressive new shell, very lou

Sorry if I missed anyone...

The battery's on the way out. It's a simple 3V Lithium battery IIRC - the
same that you'll find in Casio watches for example. Maybe it'll cost you 2
or 3 quid at any jeweller's shop, after which it's the simplest of soldering
jobs.

Open the cartridge and take a quick look to see what you need.

291. MINT sucks... :(

Newsgroup: comp.sys.atari.st
Date: 1996-10-05 00:00:00 UTC
From: thechyld@pcc-uky.campus.mci.net
Message-ID: <844567154_OASIS_@pcc-uky.campus.mci.net>
Source record: 136371

LONG POST WARNING...sorry guys... :(

Well, it probably doesn't but I've had nothing but hard luck with it.
I downloaded the TAF file (x-total.zip) and tried to install it after
learning that CAB/STik -still- does not even support CSLIP let alone
PPP. Well, I followed the instructions and copied the files onto 3
1.44 meg disks (I'm using a Falcon) and then put everything from
Install.zip into place. When I booted up to the # sign and ran the
source setup144 e command it told me it could not find my E drive
but went ahead anyways. It installed everything from disk one but
when it asked for disk 2 and I inserted it, I was told that it could
not find those files--ditto for disk 3. So, I went back and edited
the setup144 file to look for everything off of my D drive. Well,
it did manage to find everything there. Everything was installed
except for one file that it told me "permission denied" on...? GO
figure...So then I finally got to the part where it tells me to
edit mint.cnf and reboot. I follow the instructions exactly and
reboot only to tell me that there is an "exception" error, that
Kmalloc has not been allocated, and some thing or the other about
about not finding Drive E (again)...Roughly 4 hours wasted and
not a darn thing accomplished. Even worse than Oasis to install in
my humble opinion. I'm going to wait for 3 more months for CAB/STik
to support PPP and if its still not available I'm going to purchase
a NON-ATARI computer to access the Web...Sad, considering that I own
a Falcon/Mega ST4/STe/800XL/Jaguar/Lynx...and not one other brand,
but I'm tired of constantly waiting...Hell, I'm just tired after
fighting for 4 hours to get something to work that no Atarian should
even have to bother with, as friendly as TOS and GEM are... %^)

Hey man,

the anonymizer really works. I use Cab 1.41 with the mintnetoverlay
1.77. Mostly it works fine but there are some sites I can't visite due
to the famous runtime error. With the anonymizer I can viste then at
last.
Thanks

Martin

HI I just wanted to say that if you want to access the WEB, a PC is
not the smarter choice, since this fall they gonna sell the Internet
Box, = cost nothing, and a lot faster and better than any PC.
You'll just have to plug it into your TV. If Internet is the only
motivation to get a PC, then forget about it.
Also, it's not really cool (I think) to plut all this pression on the
WWW141 programers, they do the best they can. And they are doing great
so far. Get the ST online!!! 8 mhz!! DOn't forget they are working on
this project when they have the time. They are not paid to do that.
Also if you want to get online, just check OXO page, here you'll find
the info to get your Falcon online with PPP and all the Netscape
specification up to 3.1 I believe. But you'll have to pay for the
software, just as you would do for Netscape for Peecee/mac.
Bye

It's DERCS from HISOFT which de compiles RSC files and turns it into 'C'.
It works very well on every RSC I've tried, including colour icons.

Again, if they're not divisible by 320x200, their shape will be distorted. The best way around this is to convert to RAW with GIF2RAW first. PhotoChrom, unfortunately, does NOT do even scaling, but GIF2RAW does.

Message-ID: <844606730_OASIS_@pcc-uky.campus.mci.net>
Source record: 136384

Okay, first of all I want to clear something up...in my first posting, if I inadvertedly seemed to be critical of the WWW Pack programmers, I'm sorry, that was -not- what I intended...they have nothing but my respect for what they do!

Now, about my setup: I'm using a 4 meg/810 meg hard drive/TOS 4.04/ Falcon 030...

I'm trying (hard) to install MintNet (TAF file) onto my E: partition. I have followed the Install.txt to the letter, excepting that I changed the setup file to reflect that my source is drive F: instead of from floppy drive A:...

When I first type in (from the # prompt after booting up into Mint) the command " source setup e " I get the following error message...

"Cannot access Drive E: Physical lRecno Error"

From there it goes ahead and copies all the files to the E: drive... and while its copying it gives an error message...

"tar: could not create symlink to Chimera/: invalid function number"

but keeps on going until it tells me to edit my Mint.Cnf file and to reboot, which I do...then I get the following error messages...

"xmodmap: access denied"
"fvwm: access denied"
"waiting for Xserver to shutdown"
"Pid 0 (Mint)\: Kfree: memory not allocated BKmalloc"
"Fatal Mint error: adjust debug level and hit a key"

and when I hit a key it says "Fatal error, you must reboot"...

Well, there it is...my sad story...Oh, just for record--I did go into my Auto folder and disable everything but Mintnp.prg and I did disable all the ACC's...nothing boots up before Mint except for the ICD hard disk driver...

Well, if anyone can help me I surely would appreciate it...Thanks in advance for any info... :)

Oh, one more thing; I understand I have to use mint_cab.tgz to access CAB...how do I uncompress this file? What files do I need to do this? TAF is .tgz but it uncompresses itself... Thanks again! :)

:
: I'll bet she did - she can't turn her ears off. <G> That's basically the
: reason I know for using an inkjet printer - a low hum is about all it does.
: 'Course, speed and good color resolution is nice too.

But of course, most people can't turn off their ears, unless they put something in them. Extremely loud thunderstorms have been known to wake me at times, otherwise I sleep through them.

An inkjet printer would be nice for me to have, but I can't afford one for now. I will probably get a 24-pin or inkjet in a few years. Probably a Panasonic, Epson, or Star.

I've never heard of SMD versions of ST-MMUs. The PLCC version MAD9 is at pin 64. Check if the SMD version has 68 pins too. Try to follow MAD7 and MAD8 from the mainboard RAM to the MMU, and see if they are pin 62 and 63, respectively.

: >support and the MARQUEE tag.

: Yes!!!! I'd really like that!
: I'm sure nobody else would have anything against it either ;-)

\begin{rant} Animated GIFs are evil! They're large, and they're ugly --
ugly meaning that they're only 256 colours, and the animation isn't
smooth at all. I've seen these things running directly off an Ethernet on
a P75 with a good video card, and they were slow and looked like crap.

And MARQUEE! don't get me started on MARQUEE...that's almost as bad as BLINK.

Too many people seem to forget that the primary purpose of web pages is
to convey information, not too look good (or take ages to download).

\end{rant}

\begin{reasonable}
Of course, I won't object to support for either, or even blink, as long
as I can turn it off.
\end{reasonable}

311. CAB1.41 and STiK1.11 and a new CAB.OVL

Newsgroup: comp.sys.atari.st
Date: 1996-10-05 00:00:00 UTC
From: Paul Dion <wadamo@post1.tele.dk>
Message-ID: <9610052009.AA18865@aix1.danadata.dk>
Source record: 136391

I have just tested the new CAB.OVL (43029 bytes uncompressed, downloaded from flinny) on my ST system with HSMODEM6, STiK 1.11, CAB1.41, TOS2.06, 19200bauds.
This CAB.OVL seems completely unusable. I had to come back to the previous version (36543 bytes).
Although I have seen a few bomb pairs, I think CAB1.41 itself is OK.

Yep.

Thanks guys for all the replies to this. I found the problem for gher purely by chance - she also uses Stewart. There is a parameter which allows a click on the desktop to 'top' the desktop and background an application. With Calamus it seems to background the application whenever the mouse goes over a part of the screen occupied by the desktop and not by Calamus.

With this turned off it works fine...

Thanks again to all those who followed up or replied by email.

As far as I know the only thing that will print and display adobe acrobat files is the latest version of Ghostscript! I used to have the location of the archive, but can't find it right now! I do remember that it was at the utexas site and something about lifschitz or something pretty similar! If you don't have plenty of room on drive D then you may to use some type of text editor on the .inf or .cfg file which ever it has and change the D:\ to whatever your path will be!

By doing that you introduced unnecessary complications! I Hate Mint, but I was able to get it installed and running in a couple of hours with the TAF distribution! Of course I found out there is nothing useful you can do with Chimera on a 4-meg STe!

Hi Magnus!

>"Out of internal memory"
MK>what should it say in german?

This is from the german hypertext for ST-Guide:

----------snip----------
Kein interner Speicher mehr MagiC 5

Ursache:
Die Systemanfrage zum ï¿½ffnen einer Datei, eines Verzeichnisses oder
eines Laufwerks kann nicht ausgefï¿½hrt werden, weil interne
Speicherbereiche vollstï¿½ndig belegt sind.

Abhilfe:
Verschwindet das Problem auch nicht, wenn man ADDMEM zwei oder dreimal
unter verschiedenen Namen in den AUTO-Ordner kopiert, ist die Ursache
ein Anwenderprogramm, das z.B. Dateien oder Ordner nicht schlieï¿½t
(fehlendes Fclose() oder Dclosedir()).
----------snap----------

>without X11?

To conserve memory you should consider running MiNT and single TOS. The most
important step is to get Chimera running under X - just make it follow a link
successfully :)
This will incolve editing the /usr/ucb/chatfile and /etc/ppp/options and
possibly other bits in /etc to set up nameserver & so on . . .

Having done this, use my mint.cfg as a _guide_. This will drop you onto the
desktop, but with MiNT still running.

```
-------------------

CON=u:\dev\console
PRN=u:\dev\console

# Un-comment the next four lines if you have installed GlueSTiK . . .
#cd c:\
#
#exec c:\stik_cfg\gsdaemon.prg
#exec c:\stik_cfg\gsdriver.exe

cd u:\

setenv UNIXMODE /-ru
setenv TEMP /tmp
setenv TEMPDIR /tmp
setenv PATH .,\bin,\usr\bin,\usr\local\bin,\usr\etc,\usr\ucb
setenv HOME \home
setenv SHELL \bin\sh
#setenv TERM xterm
setenv PCONVERT PATH,SHELL,HOME,CDPATH

sln e:\usr\bin u:\bin
sln e:\etc u:\etc
sln e:\usr u:\usr
sln e:\home u:\home
sln e:\tmp u:\tmp
sln e:\var u:\var

exec e:\usr\etc\syslogd
```

Run tcsh as tcsh.tos from a TOS partition, this should find your /home directory and the tcsh.csh init file. Oh yeah, theres a few lines in there about setting up for an xterm under X - comment these out.

Run the ppp144 or whatever, then when you get the ppp running, exit to the desktop.

You should now be able to run CAB, if you have the cab-for-mintnet cab.ovl file (see A.Clauss' home page for a link).

MiNTNet is pretty cool. You get ppp with all the text internet progs under tcsh (or bash in my case), plus CAB and DUftp under GEM. If you run GlueSTiK you get all the STiK apps too.

Please if anyone has any questions please post them to this group rather than e-mailing me. You are more likely to get an answer, and it might also help others.

Regards,
Ian.

The EIDE designation won't make any difference but you will find that some manufacturers drives simply won't work. I found this to be the case with any of the Toshiba manfactured drives of any size. Every IBM or Quantum drive I've tried worked fine (at least up to 810mb).

333. Re: ZIP ON ATARI

Newsgroup: comp.sys.atari.st
Date: 1996-10-06 00:00:00 UTC
From: Lonnie McClure <lmcclure@delphi.com>
Message-ID: <x7BRtM3.lmcclure@delphi.com>
Source record: 136314

My biggest concern about getting a EZ-135 at this point would be future availability of ZIP carts. Anyone buying an EZ-135 should check into this and/or purchase as many carts as they feel they might need (and can afford) up front.
-
With the ZIP drive, media availability seems to be no issue, not only due to the continued popularity of the drive, but also due to the number of companies now manufacturing the media.

If you are using Cab under MINT+MintNet with cab_for_mintnet OVL, it is normal
that you can't send mail. Cab_for_mintnet doesn't allow this feature ...

I wonder if 'Dancer' (the author of cab-for-mintnet) is still working on it.

Perhaps somebody could upload it to some ftp sites?
(Please send me an eMail about the uploads. Thanks.)

> UH> alvi (Alkor JPEG-Viewer) is a very special JPEG viewer.
> UH> It can handle large JPEGs with a very small need for RAM.
> UH> The display of the current version is only monochrome.

>How does the display compare with MJPEG?

What is MJPEG? I've never heard of it.

>That's what I'm using now, because of its excellent display

alvi display JPEGs monochrome (all published versions) using Floyd Steinberg
Dithering and in 8 grayscales (currently unpublished version 0.06beta, visit
my web page!)

>and relative fast speed,

alvi is fast.
A lot faster then GemView,
faster then MGIF (alvi with shrinking factor 2...8, 2 is default)

You don't need a coprocessor or a DSP.

>and rarely (if ever) run into memory problems (using 4 megs on an STe).

Same to alvi. You need a real big (bigger than 2400x1800 pixels) JPEG to
get a "out of memory" on an 1040 ST with 1 MB.
If you have not enough memory, you have to choose the next shrinking factor,
and alvi will load it.

Greetings,
Uwe.

The Atari Programmer's User Group

Peter Hibbs, the editor of ICTARI, the Atari programmer's disk-'zine has given me the go-ahead to put some back issues (including the current one) on a web site. He hasn't seen it yet, so it could be subject to quite a few changes. The page contains five zipped issues (averaging around 250kb each), a facility to mail articles to me, which I will then forward, and some brief notes about how the disk-based version works. You can get to the page from my home-page at:

http://www.elis.demon.co.uk/

Or, you can avoid my warped sense of humour and cut to the chase at:

http://www.elis.demon.co.uk/ictari/ictari.htm

Have fun, and tell me what you think. I'd like to add more links to other Atari programming resources in the near future. Anyway, please give it a go.

Enjoy Theeselves,
"Augeas"

From: timg@abraxis.com
Message-ID: <32584E37.7EAD@abraxis.com>
Source record: 136322

Hi,

>href="ftp://ftp.cs.wisc.edu/pub/ghost/aladdin/gs333fn1.zip">Ghostscript
> standard fonts (1365 Kbytes) [needed]
> Ghostscript> other
fonts (741 Kbytes) [optional]

If you are going to download Ghostscript's fonts, I recommend
downloading the new fonts for GS version >= 4.0. They are supposed
to be of reasonable quality (haven't seem them myself though),
while most older fonts were quite poor. The new fonts should work
with any version of GS, including 3.53 for the Atari.

The new fonts are available at

ftp://ftp.cs.wisc.edu/pub/ghost/aladdin

in the files

ghostscript-fonts-std-4.03.tar.gz and
ghostscript-fonts-other-4.03.tar.gz

You tell me how to get past that tornado guy in the mirror room, you know, the room you teleport to from the library and the four staired room? The room connected to the other room where there is a potion in the lower level room along with a soldier, and after I catch up with you, I'll help you figure it out.

If there's room inside, do what I did: get a 2-cell AA holder and use that
instead of the lithium cell. Cheaper and much easier to change the battery
next time it goes dead (about 3-5 years, BTW).

Yep. There's an archivist working on the 8-bit section. There's no one
maintaining the ST section. And that's the bottom line. Umich doesn't give
a fig about us STers any more.

[......]

Well, I installed the TAF package on my STe a few weeks ago and with a
little friendly help I successfully got it all to work!

It's possible to install it all from the harddisk though, which is ofcourse
a lot quicker than using disks. I can send you the "install" file for that
if you want to. Also, and important thing which I wasn't aware of: you need
to keep the compressed files on another partition, since Mint totally
erases the partition it installs itself on!

I.e. in my case I wanted to install Mint on e:/ -if you keep all those
mint files on that partition they'll be erased before the installment is
complete, so let the installer read them from another partition.

Mail me if you want some help. I'm sure that if I got it to work on my STe
your Falcon will work just as fine.

On the other hand- why not install Linux on your machine? I've heard others
do that with great success!

: that I have SMD C101601-38 chip for MMU. For this Chip I don't have any
: data where is Address line A9.
: For information I'll be wery grateful.

i would, uh, "expect problems" adding any gate delays to the memory system of the 1040. but don't let me stop you.

a later revision of the DRAM controller had a one gate-delay "garbage dump" MMU. enough to run a unix process with a text segment, an upward-growing BSS segment, and a downward-growing stack. the chip designer was still worried about the on-chip gate delay. the ST runs DRAMs at (ahem) somewhat aggressive rates.

i could be wrong, but i'm pretty sure this MMU was never used. (or are there ST versions of linux that do? i've not kept track of the ST at all).

Source record: 136335

```
FROM: SSweet@mettav.demon.co.uk
SUBJ: HELP!!! Major Problem

r> I'm having a mjor problem. I am unable to boot from my hard drive

A common problem.
r> I'm using ICD boot with a Link 2. What I would like to do is abort the
r> booting process before Neodesk starts loading from the AUTO folder. That
r> way I can exit out and see what the problem is.

Since your using ICD booter you can select another device to boot from at run
time, such as drive A, switch on or reset and hold the A key, you can then
access drive C: and disable the offending files. This is a classic case for a
boot manager.

Regards from STEve & his nice warm cosey PAK'd MegaSTE.

356. FS SLM804 laser printer...great price!

Newsgroup: comp.sys.atari.st
Date: 1996-10-06 00:00:00 UTC
From: rjre@aol.com
Message-ID: <537hl6$mvf@newsbf02.news.aol.com>
Source record: 136337

FOR SALE:

Atari SLM804 Laser printer with phantom modified interface,
extra paper tray, and an almost new toner. The phantom mod
adds power to the interface so that the printer can be powered
off and still hooked to the DMA chain. Without the modification,
the SLM needs to be powered on or connected DMA hard drives
will not work. I am asking only a very reasonable $140 for
the whole setup, plus shipping.

I live in California for shipping considerations.

If interested, please email me at RJRE@AOL.COM

EIDE or IDE, it makes no difference on a machine other than PCs. I know someone with a 2.5 gig EIDE drive in their Falcon. Just make sure it's 2.5 inch or you get an adapter to fit 3.5" into 2.5" cables.

>HI I just wanted to say that if you want to access the WEB, a PC is
>not the smarter choice, since this fall they gonna sell the Internet
>Box, = cost nothing, and a lot faster and better than any PC.

It won't cost nothing. The unit may be sold at cost in order to shift the boxes, but you can be sure that on-line charges will be set high enough to compensate for this, exactly like the Sony Playstation is remarkably cheap but the games cost a fortune. (At least, this is surely what's going to happen with the box Acorn are launching in the UK, which will be tied to a corresponding Internet service. I await pricing details with interest.)

It won't be faster. The bottleneck is the comms, and the maximum throughput will be determined by the quality of the telephone line. It won't go any faster than 33.6Kbps.

It won't be better. I imagine that with an Internet Box, you'll be tied to whatever firmware they supply with it - you wouldn't be able to choose from several different email applications, for example. The only possible advantage I can see is that the Internet Box lets total computer novices access the net - although whether or not this is a Good Thing is definitely open to debate. But sooner or later, they're going to want to print something out.. or maybe play some game.. or view or listen to something in a file format not supported by the firmware. It's the computing equivalent of a play-only video recorder.

: Make sure Extendos runs _before_ the Magic auto prg.

Doesn't MAGXBOOT then reload everything again after itself? It seems to
on the MagiC 4 systems I have seen. I use ExtenDOS Pro 2.4a under MagiC 4
frequently with no problems other than the APEX series animation/picture
viewers not being able to work from/of CD...

If you would like to know more about how I have setup AUTO folder
programs (something else may be the culprit), MagiC, or ExtenDOS, then
drop us a line...

Why? Try using the original disks and the original setup-script. I installed TAF without any problems, except one... I used the german keymap, and when I booted MiNT the first time to run setup, I didn't remap to norwegian keyboard. So when minit asked if it was OK to erase drive D (Which is where I wanted to install TAF) I pressed the "Y"-key, not knowing that Germans have swapped their "Y"- and "Z"-keys around... Therefore the partition was never minix'ed and setup tried to install TAF on a normal TOS-partition.

TOS-partitions doesn't allow symlinks.

Ahh! You use the f**kin' ICD-driver! The last version I used (6.5.something) wasn't compatible with MinixFS at all, so I switched to hd-driver which is xhdi-compatible. Try using another driver and the original disks and you should have no problems.

: >seeing them all lovely and animated on PC's, then vote here for Animated GIF
: >support and the MARQUEE tag.

Yes that gets my vote too, but perhaps our support should go towards a
more stable TCP/IP stack. Perhaps some genius can wrap a GEM accessory
frontend on MiNTnet 1.01 source and make it singleTOS and MagiC friendly.
Sadly I'm not a genius, but I'll gladly support one if they give this
'project' a go!

I would vote more for FTP, EMAIL and NEWSGROUPS to be built into CAB
first. Then do stuff like animations, sound, frames etc...

CAB is first class no bout adout it, but I think we need to look more at
the 'substance' in the cake, rather than the frilly icing on the top...

Yes: MagiC-MAC, distributed by ASH (Applications-System Heidelberg, Germany): It's a very fine software-emulator. Two Tools you should buy too: EASE (as new desktop) and NVDI-MAC. My descision to leave ATARI-Hardware and to use MAC with this emulator has been the best of the last year. I'm now faster than on the original.

There's only one great problem: If you want to use a MAC-LASER-Printer, which is possible with NVDI-MAC, and if the program on atari-side sends text-files as whole pictures (like Tempus Word) you have to wait very very very very ... very very very ... long. It's unpracticable. But for that, you can use PowerPrint, which is a hardware-solution changing the seriel-data into parallel-data, so that you can connect parallel-printer with the seriel system MAC.

Greetings KR

370. Re: tos2win or gemulator

Newsgroup: comp.sys.atari.st

Source record: 136351

The answer is: yes or no (from the logical point of view it's a very fine sentence; it's true in every case!):
(1) You can use card-solutions like gemulator. Or you can use software-emulators. The best (I think) should be MagiC-PC. It's distributed by the company ASH (Application-Systems Heidelberg, Germany). For a demo, you should use their WWW-pages. Their products (like MagiC, MagiC-Mac etc.) normally are in a very fine state. And their support is good, too. But it's a commercial solution. If You decide to use this solution, you should also by NVDI-PC for using your Window-Printers etc.
(2) But note, what ever solution you prefer, you must use Windows 95 (for tos2win, gemulator or Magic-PC). And these programs are commercial.
(3) I have never heard from a freeware- or shareware-emulator for earlier versions of Windows or for DOS. If you will do so, please send me a little message.

Greetings: KR

Well, I tried setting it up on both 720k and 1.44m floppies just like the
install disk said but in both cases when I ran it, it would do fine until
the point it asked for the next disk...at that time it would go through
the rest of the disks and tell me in every case that it could NOT find
the remaining files...so I was left with not choice but to try to install
it from a hard drive partition...

>> and while its copying it gives an error message...
>> "tar: could not create symlink to Chimera/: invalid function number"
>
>TOS-partitions doesn't allow symlinks.

Well, thats the whole point in making a dedicated Mint partition
anyways, isn't it? I dedicated a 135 meg partition (Drive E:) just
for this purpose! Isn't it supposed to make the partition I pick
into a Mint one?

>Ahh! You use the f**kin' ICD-driver! The last version I used (6.5.something)
>wasn't compatible with MinixFS at all, so I switched to hd-driver which is
>xhdi-compatible. Try using another driver and the original disks and you
>should have no problems.

I'm using ICD's HD Utils v6.5.5 and when I formatted my 810 meg hard
drive I picked the option that makes it AHDI compatible...isn't that
good enough? I had never heard it mentioned that you could not use
ICD's software with MintNet...is that correct?

Well, thanks for your advice, Joe...I appreciate all the help that
I can get! :)

THIS IS FOR REAL! By following these instructions, you can get up to
$55,000.00 by simply mailing $1.00 to five different people.
I have been thinking about this for the last two weeks, trying to come
up with pitfalls etc, the more I thought about it the more I like it.
I do encourage you to think about though that way you can appreciate the
beauty of it to long. But I'm telling you now you'd be mad not to take up
this opportunity.

IMPORTANT: This is not a rip-off; it is not indecent; it is not
illegal; and it is no risk - it really works!!!

Here are some words from people who have actually done it.
If all of the following instructions are adhered to, you receive
extraordinary dividends. My brother did it about a month ago
and he has received over $5,000 already. Let's face it! If you
only ever received $50 from your initial investment of $5, it's
still a great deal!!! The earnings are exponential. $5 ??? Not
much when you are looking at $5,000 to 50,000 dollars.
Signed: Joe

The following letters were written by participating members:
This is Paul Trujillo II number 2 on the list doing it for
my second time . I made over $50,000 the first time and
I am looking to double it this time. If this system worked
for me, just think what it would do for you.

To whom it may concern: About six months ago I received the
enclosed post in letter form (snail mail). I ignored it. I received
about five more of the same letter within the next two weeks. I
ignored them also. Of course, I was tempted to follow through
and dreamed of making thousands, but was wrong! About
three weeks later I saw this same letter posted on a local
bulletin board in Montreal. I liked the idea of giving it a try
with my computer. I didn't expect much because I figured, if
other people were as skeptical as I, they wouldn't be too quick
to part with five dollars. But, I buy lottery tickets weekly in
my province and have nothing to show for it but ticket stubs.
This week I decided to look at this as my weekly lottery
purchase. I addressed the envelopes and mailed out one dollar
in each as directed. Two weeks went by and I didn't receive
anything in the mail. The fourth week rolled around and I
couldn't believe what happened! I can't say that I received

$50,000, but it was definitely well over $35,000! For the first time in ten years I got out of debt. It was great. Of course, it didn't take me long to go through my earnings so I am using this excellent money opportunity once again. Follow the instructions and get ready to enjoy. Good Luck!

I tried a similar program in which the cost was $5.00 per response. In that one the return was about 3%. Since I did not have a modem I sent out letters through the regular mail. I created a few mailing labels and printed out all of the labels on pressure sensitive tape. The first mailing that I used the $1.00 dollar per response approach I started to get return mail in just over one week! I sent out 200 letters instead of the 100 that is required if you use mail instead of bulletin boards. Additionally, I included as many friends, relatives, classmates that I could think of in order to encourage their participation if they happened to recognize my name , so my percentage of gain was higher. I am trying again with 500 letters to see if I surpass the $141,000 of the last time. You just won't believe it until you try. Best wishes, Mark Garner - Dallas TX.Best wishes, and do what you think is right.Thanks,Jerry Vaiana

This is a legitimate investment opportunity. You invest $5.00, and then you receive a return on your investment. A huge return! So does the next investor.

The process is very simple: 1- Write your name and address on 5 pieces of paper. Below that, write the phrase,"Please add me to your mailing list". Fold a $1.00 bill inside each piece of paper and mail them to the following 5 addresses:

1. Bill Brown
148 South Downlen #796
Beaumont, Tx. 77707

2. Olivier Arcadipane
237 rue Francois Andre
7390 Quaregnon, Belgium

3. Marco Monet
409 N.E. 107 St.
Miami, Florida, USA 33161

4. David Watkins
1376 Holland Hill
Southlake, TX 76092

5 Daniel Lower
61 Viscount Road, Waldronville
Dunedin, New Zealand.

2. Now remove the top name from the list, and move the other names up.This way, #5 becomes #4 and so on.

Put your name in as the fifth one on the list.

3. Post the article to at least 200 newsgroups. There are at
least 17000 newsgroups at any given moment in time.
Try posting to as many newsgroups as you can.Remember
the more groups you post to, the more people will see your
article and send you cash!

4. You are now in business for yourself, and should start seeing
returns within 7 to 14 days! Remember, the internet is new
and huge. There is no way you can lose.

Now here is how and why this system works:

Out of every block of 200 posts I made, I got back 5 responses.
Yes, thats right,only 5. You make $5.00 in cash, not checks or
money orders, but real cash with your name at #5.

Each additional person who sent you $1.00 now also makes 200
additional postings with your name at #4, 1000 postings.On
average then, 50 people will send you $1.00 with your name at
#4,....$50.00 in your pocket!

Now these 50 new people will make 200 postings each with your
name at #3 or 10,000 postings. Average return, 500 people= $500.
They make 200 postings each with your name at #2= 100,000
postings=5000 returns at $1.00 each=$5,000.00 in cash!

Finally, 5,000 people make 200 postings each with your name at
#1 and you get a return of $50,000 before your name drops off
the list.And that's only if everyone down the line makes only 200
postings each! Your total income for this one cycle is $55,000.

From time to time when you see your name is no longer on the list,
you take the latest posting you can find and start all over again.

So thats it. Pretty simple sounding stuff, huh? But believe me, it
works. There are millions of people surfing the net every day, all
day, all over the world. And 100,000 new people get on the net
every day. You know that, you've seen the stories in the paper.
So, my friend, read and follow the simple instructions and play
fair. Thats the key, and thats all there is to it.Print this out
right now so you can refer back to this article easily.Try to keep
an eye on all the postings you made to make sure everyone is
playing fairly. You know where your name should be.

REMEMBER....HONESTY IS THE BEST POLICY.YOU DON'T
NEED TO CHEAT THE BASIC IDEA TO MAKE THE MONEY!
GOOD LUCK TO ALL,AND PLEASE PLAY FAIR AND YOU WILL
WIN AND MAKE SOME REAL INSTANT FREE CASH!

There must be something wrong with your disks... This is how the files are
arranged on my TAF-kit (1.44 disks.)

Disk 1:
readme.1st
2a.tgz
2b.tgz
3.tgz
install.txt

Disk 2:
4a.tgz
4b.tgz
5.tgz

Disk 3:
6.tgz
7a.tgz
7b.tgz
install.zip

This kit works perfectly, except for the stupid problem with the keymap
I mentioned in my previous post I had no problems when installing it.

Yes, but if minit can't "minix" the partition it will still be a
TOS-partition, and all attempts by tar to create symlinks will result
in errors.

> I'm using ICD's HD Utils v6.5.5 and when I formatted my 810 meg hard
> drive I picked the option that makes it AHDI compatible...isn't that

The driver also needs to be xhdi-compatible, otherwise minixfs won't work. I think this is the source to all your problems. I also believe that there are some problems with "big" partitions, perhaps your 135Mb partition is to big? The TAF-kit only uses about 5Mb anyway...

I have ExtenDos as the first program in the Auto folder after Magboot
and Xboot that I use for boot up selection.
What I find so strange about this whole thing is that I run exactly the
same auto programs after ExtenDos under TOS and Magic. This shouldn't maje
the difference as I pointed out that ExtenDos is the first thing to run.
As an extra bit if information, I use HD Driver 4.5 as my hard disk
driver. I am going to go back to AHDI and see if this makes a difference.

Here is my ExtenDos config file and my Magic inf file so that anyone
can advise.

Any help would be gratefully appreciated.

: I have 256 & 520 Mbyte partitions.

AHDI works with "big" partitions, as does CBHD. HDDriver and HuSHI are
reputed to work, but I haven't used either. ICD v.6.5.5, for whatever
reason, doesn't like MinixFS, probably, as the quote says, because it's
not AHDI compatible nor is it XHDI-compliant. ICD v4.3 was able to cope
with MinixFS. No idea why, and it is a pity, since the tools that come
with the ICD drivers are quite good.

If there's room inside, do what I did: get a 2-cell AA holder and use that
instead of the lithium cell. Cheaper and much easier to change the battery
next time it goes dead (about 3-5 years, BTW).

Hello everyone. I have in my possession a large pile of 256k Dram(1 bit wide, 85-150 ns), and am wondering if it is possible to build a RAM module to expand my paltry 1 megabyte(1040 STFM) to a more agreeable size. I would be grateful for any info, diagrams, schematics, pinouts, part #'s, horror stories(that wonderful smell of burning resistors), or other commenatary.

But later versions of AHDI _is_ xhdi-compatible! ICD isn't (I think... At least I couldn't get it to work.)

> I have 256 & 520 Mbyte partitions.

The docs mentioned something about problems with large partitions, but as I've never tried to minix partitions larger than 60Mb I really don't know.

390. TeX/LaTeX on Atari

Newsgroup: comp.sys.atari.st
Date: 1996-10-07 00:00:00 UTC
From: vl@info.ucl.ac.be
Message-ID: <53b8hu$j17@sci3.sri.ucl.ac.be>
Source record: 136214

Hello all

I have a few questions for those of you who use TeX/LaTeX on their
Atari:

- What implementations of TeX exist for the Atari ST/Falcon? What are
their respective advantages? I would like to have a quite complete
LaTeX2e setup for a Falcon with 8 Mb RAM, 65 MB HD, Canon BJ300 printer.

- Is the speed acceptable on a Falcon?

- Is there any implementation of DVIPS available?

Thanks in advance.

394. Re: Let's have some animation in CAB :)

Newsgroup: comp.sys.atari.st
Date: 1996-10-07 00:00:00 UTC
From: bjr@edison.ebicom.net
Message-ID: <53a7bb$3em@einstein.ebicom.net>
Source record: 136218

Hey...I'd love to see CAB run animated gifs...and support all the
nifty net-scrape extras such as split windows..etc...etc...

I have to agree with the above people however...
1. Get the TCP/IP part stable
2. Full support for proposed HTML 3.00 and the more common Net-Scape ext.
3. Build interlaced gifs on screen...and display text as it gets it.
4. General Speed improvements
5. Full client side image map support. (this might work...haven't tried)
6. FTP-Mail-NNTP

Once all this is very solid...the other things should come fairly
rapidly, depending on time limitations of the programmer. That's
the cool thing about HTML browsers...once you get the foundation
solid...you simply add the new features to your code, recompile, test
it for a few weeks, and its out there. It makes it much easier to
trouble shoot when you don't have a whole lot of stuff going on at once.
This way...you know the problems are most likely caused by your
new code...not an old problem just now showing up. When it does...
you just pray that you don't have to go back and re-write the whole
thing to get this one nifty new feature!

At any rate...CAB ROCKS!

399. True Color? (Falcon VGA)

Newsgroup: comp.sys.atari.st
Date: 1996-10-07 00:00:00 UTC
From: bjr@edison.ebicom.net
Message-ID: <53aedj$3em@einstein.ebicom.net>
Source record: 136223

I recently sold my Atari SC1224 RGB monitor in favor of a really nice 15" SVGA plug and play monitor. Now I notice that I can't get true color without going to a 40 column mode!

What do I need to go into an 80 column true color mode?
Options? Prices? Performance?

Also...I'd like to use some higher resolutions in 2 color mode with CuBase. My monitor will go to some impressive resolutions without going to a slower sync rate or interlace mode. Are any of them practical on the Faclon in terms of speed/viewability (mainly in 2 color mode for CuBase Audio).

Thanks,
Brian

I think there are quite a few, but I use CS TeX. You can get it from the
UMICH archive mirrored at Imperial. (Also the Atari Compendium CD.)

>their respective advantages? I would like to have a quite complete

Dunno ! But you can include .IMG and .GEM files in documents. I've
managed to do all I need so far...

>LaTeX2e setup for a Falcon with 8 Mb RAM, 65 MB HD, Canon BJ300 printer.
^^^^^^^

I don't know what's specific to that version, but mine runs okay on a
4-Meg ST. There's bound to be a Cannon driver. If you *really* want the latest
version, perhpaps fit an FPU and get Linux. (Does anyone know it it's fast
enough ?)
>
>- Is the speed acceptable on a Falcon?

I ran off a fifty page document with loads of tables and graphics on my
ST, the speed was reasonable.
>
>- Is there any implementation of DVIPS available?
>
Yes. I ploughed the output back into GhostScript, and it checked out
fine. (It comes with the CS TeX distro, which also comes with a nice shell.)

Hmmmmm, depend on how many want to join ! Could be a lot of stamps !
Well, I'd certainly be happy to snail disks regularly if the content adds to the debate in the 'zine. If you are on-line, then being on the member's list would be cosmetic anyway, as you will always be able to get new issues. Perhaps people could submit their name/address (stating if they want it published on the member's list) with their first article or question to the 'zine. They can then automatically appear on the member's list in the next issue. Note that I'm just as happy to forward programming queries as articles. If Pete gets on-line I can just redirect the mail to him anyway. I don't know. I don't even know if he's seen the page yet. We shall see. Anyway, new issues will be mounted when I get them.
Now, some other questions. Why can I see visited links on my page with Netscape on a PC, but not on a Mac ? I was planning on having a colour swapping session tonight. Also, if the fake icon bar (Intell Outside logo and all..) appears when I view the pages on my hard disk, why can't I see it when I download them with STiK ? Does CAB's mailto actually work ? What did you make of the darker, *nastier* things in "Thee Augean Stables" TM ? If anything doesn't work, please mail me. This is my first bash at HTML, be patient...

Enjoy,
"Augeas"

Hello, i am installing opus and i got everything to work except the
chart printing part. Whenever i try to print or save a chart it says
cant open meta station. I looked at the install.doc and it says i should
have a file called meta.sys. Its not anywhere int he opus archive i downlaoded
I tried looking for meta.sys in the ftp sites couldnt find it. Anyone know
where i can get it from? Thanks
Sam.

I believe that adding menu items to launch the existing ftp and email
proggies, and eventually the coming newsreader, is better than building such
things into CAB. Netscape tries to be all things to all users, and frankly,
it's a mediocre emailer and a horrid newsreader.

Additionally, by using seperate proggies, we get a devoted developer for each
one - much easier to get bugs fixed that way, trust me!

FS: Atari SM124

For Atari ST computers.

Highres paperwhite monitor (640*480 at 70 Hz refresh).

Rock-steady display.

Great for MIDI sequencing (Notator requires this monitor!) or DTP.

Asking $60 + shipping or best offer.

OR trade for latest Atari or Mac Cubase (3.1?) + shipping.

Assuming you're correct (and I'm not yet convinced, as I have seen my clock
get acidentally set to sometime in 2027), it will be a simple matter to set
the year to sometime in the 1900s that has the same days/week as 2000+, and
then make a small AUTO folder proggy to simply add the correct number of years
after bootup.

Uhm.... No.

The screen is refreshed at usually either 50, 60, or 72 frames per second
(depending on the resolution and PAL/NTSC ROMs). Thus, you should get 50, 60,
or 72 VBI per second. Other refresh rates are possible on the Falcon, but I'd
lay long odds that none of them are exceeding 80 Hz.

"It is, in fact, an electric train set."

The primary purpose of the Discovery cart is to copy floppies; it also has a
realtime clock, the Mac ROM sockets, and depending on options, may allow
connecting up to 4 floppy drives total plus I forget what other functions.

Hi Mike....cockup with the email, or sublime advertising? :)

Actually I am surprised at the lack of comment in here about the
launch of the mag?

Ok Its here in front of me...so heres a long posting about it :)
****
Got my copy at the ATARI show in Birmingham, I was pleased to see
that they quickly sold out of that days allocation, Don't suppose late
arrivals would agree, but it has to be a good sign when you can shout
"Sold out",

As promised, 60 pages, all Black and white, but quality B/W, for
example the cover page took 2 days to render, suffice to say, it
wasn't just thrown together, the whole thing looks and feels very
professional,

Contributors and actual team include, M.Kerslake,Joe Conner, Al
Goold, Denesh (Danny where were you at the show?) Bhabuta, Martin
Milner,Graeme Rutt, Kev Beardsworth, Harry (Cider Drinker) Sideras and
many many more well known ATARI names, there's only a couple I didn't
personally recognize,The exclusion of Frank Charlton was glaring?

Nice touch was a very large and graphical addition by Vic Lennard
wishing the magazine every success (Same to you Vic!)

Three full pages of news was...News?, this is quite rare in a
magazine as they are usually a good month behind, yet ninety percent
of the news I read was just that,

A letters page in the first issue, well why not :), This looks like
it will be the liveliest addition to the magazine,

Maggie diskzine get there own section (How did you swing that one
Chris<G>) and each issue of AC will feature an article from one of
there back issues, Chris is one of the best writers I have come across
and no matter the subject, he can make it good reading,

Ho dear, the very next page see's A message and Three articles from Issue #2 of the excellent ATARIPhile, Personally I read all the diskzines and readable releases I can find on the ST, so in my humble opinion I would not be too pleased reading so many articles I have already read in Diskmagazines for free?, Full credit has been given to the diskmagazines for these articles etc, but.....

Anyway as I was saying, There is also a Q & A section in this issue, with the contributors this magazine boasts then I cannot see any question going un answered :), we can all learn from other peoples questions so this makes a good read,

There are of course advertisements from various companies, these are well laid out and in my opinion just the right amount, you are not hit in the face every other page with a full page advert, there are not too many, and not too few, just right :)

The magazine does not waste space, no gaping white squares that could have been filled with text, all the space on every page seems to have been used to its greatest potential,

Articles, some great reading here, quite a lot in helping keep the ATARI community together, Three pages starting with "STAG NIGHT" take us through everything you need to know about user groups, featuring STAG,WSAUG and WAG, with hefty (and quite rightly to) references to AAUG the Association of ATARI User Groups,
"ON THE NEST" takes us through everything you need to know about joining the BBS network of systems, mainly NeST, reason enough alone for getting a Modem, if you have a local BBS that carries NeST then use it!

There are of course lots more articles, all of interest to the majority of ATARI users, by no means for the techies only,

Reviews, Alright this was/is one of my main reasons for subscribing to the magazine, I have to admit to having been a little worried on this front, for some reason ATARI World has been used a lot in pre-comparisons, With Joe Conner doing the honors this made me even more worried as he has a self confessed biased towards GEM based products, where personally I hate GEM,
Worried for nothing, I was more than pleasantly surprised at the amount of software reviewed, the way it was reviewed and the various types of software reviewed, no preferences by anyone here, From serious GEM applications to simple games, there are all there, I give the magazine one hundred percent marks for there direction in software reviewing,

Ok....I will be back for more, and will re-subscribe, it is definatly worth the money and worth waiting for, a good read,

Cheers.............!ynoT

>and does bugger all:-(

Re: K-Ellis's posting :-)

Also,

Under Server/Settings ensure you have the field with "SMTP" mentioned
in it set to zetnet's posting host (same as Nos "smtp gateway" line).
You need to be have Cab load cab.ovl to get at Server/Settings.
Clicking on "default" should copy it into the field iirc. Then save
the setting as per normal.

419. Re: CAB1.41 and STiK1.11 and a new CAB.OVL

Newsgroup: comp.sys.atari.st
Date: 1996-10-07 00:00:00 UTC
From: guy@swampdog.demon.co.uk
Message-ID: <844805778_OASIS_@swampdog.demon.co.uk>
Source record: 136243

This method of sorting things out has always served me well. For those experiencing problems, and definately those new to the internet I strongly recommend it.

Install STiK
Run Finger This needs next to no setting up, just something definate to finger like your provider's message of the day. If it works then the nuts and bolts of STiK are functioning. If it doesn't then it is almost certain you've not got STiK set up right.

if ok so far ...

Run Cab If this will not resolve, or resolves but will not receive and data, then try IRC. It displays what it is doing and can usually give a good indication of the problem with Cab. It defaults to connecting to #atari so if it works it will be obvious, even if you've never used irc before and never intend to again. You will need to give the docs a quick read to set up a couple of things but this time is nothing compared to the time and frustration you'll subject yourself to otherwise.

Possibly. You'd have to read the SetUp docs very carefully to ensure
the batchfiles are valid. If your provider is listed then it might be
worth the effort, otherwise it'll be easier to sort out manually.

>And lastly, this will be my last effort. If I can't get this new STiK

>login, ie Sdaymon=SLIP, Cdaymon=CSLIP, and Pdaymon=PPP), gets the correct
>IP address (I've checked this with my ISP), and does basically all it's
>supposed to do.

Now try Finger. If unsure what to finger ask your provider for
something simple and guaranteed like the message of the day. What
happens?

> 2. I run CAB. While attempting to open a URL, it goes thru the
>resolving host fine and gets stuck at "Receiving data (0 bytes)" until
>CAB times out and gives me a blank page. It does this for all URLs I've
>tried.

There is more than one cause for this, depending on what happens at
the Finger stage.

> 4. I run IRC, Finger, and AntMail, and all I get is Errors.

What *exactly* are the errors for IRC and Finger? This is important.

>Ok. I'll now accept any suggestions you have and try them one last time.
>If it doesn't work, I am giving up on this and saving my money. I will
>certainly and gratefuly accept any questions or comments you have! Thank
>you for any info you have to give me! I can send you my files (minus the
>password of course) and the settings my ISP gave me if you'd need them to
>help.

It sounds like it is resolving and doing little else. Difficult to say
much more at this stage.

421. HDDriver v6 problem

Newsgroup: comp.sys.atari.st
Date: 1996-10-07 00:00:00 UTC
From: rich@rjelwell.demon.co.uk
Message-ID: <844727644_OASIS_NEWS@rjelwell.demon.co.uk>
Source record: 136245

I got my copy of HDDriver v6 today, upgrading from v3.51, and have
been unable to get to work properly.

I have a Falcon with an internal IDE and SyQuest EZ135. The new
HDDriver will not recognise the EZ135 when the machine is rebooted.

Am I missing something, I have tried as many of the options as
possible, or is one you having the same problem?

Rich.

422. MagiC + 040

Newsgroup: comp.sys.atari.st
Date: 1996-10-07 00:00:00 UTC
From: rich@rjelwell.demon.co.uk
Message-ID: <844727968_OASIS_NEWS@rjelwell.demon.co.uk>
Source record: 136246

For sometime I have been considering getting MagiC but put it off till I had more processing power and memory. My Afterburner has solved those two problems but I was dismayed to read in an ST Format article about the Medusa Hades, T40 and T60, that MagiC doesn't work on the 040.

But with the Afterburner there are beta versions of patches that claim to work with MagiC. So do any of you use MagiC with an 040 equiped machine?

Rich.

Is anybody out there still into playing Atari ST games? I would like to hear from people,especially in my area (Los Angeles),who still pay attention to the (barely lingering) ST game scene and collect the newer PD and commercial stuff.Has anybody played Arnorath from Top Byte software? Thats the next game I want. Also could someone be kind enough to send (e-mail) me a copy of Clod Hopper the PD Miner 2049er clone for the ST? (or tell me where to get it) Mine went bad and for some quirky reason none of the FTP's I checked had it,and I checked at least 20 around the world.Hmm strange...that was my favorite ST game too,well one of them.Also Im selling a mega 4 with a nova card (16million color) and a megafile 30 hd for....hmmm....$200.

Sincerely,Me

>in perfect nick. I only want email and news access. Don't fancy wasting my life
>websurfing :) i.e. it should be a comfortable speed, right?

Go for it then! But knock the price down a bit. Your lecturer probably
paid over 100UKP for it a few years ago, but that's *NOT* what they sell
for now. Also there must have been chip upgrades and improvements over
the years. It'll hurt him but he'll have to accept that his modem has
really dropped in value. I suggest you offer 15-20 UKP for it. After all
for another twenty quid you can buy the latest version with a warranty
and support, new chipset, improved specifications, manual, etc. Buying
an older model at 40 UKP just wouldn't make sense!!! Unless you've got
money to waste...

Hope your negotiations go well, and don't be fobbed off by, "Well I paid
a hundred and twenty for it just two years ago." That's just the harsh
reality of `Product Life Cycle', ask any economics lecturer. :-)

All the best,

Ali

:) <grin> Kind of like finding out a TT only does 16 colors in VGA.
>
> What do I need to go into an 80 column true color mode?
> Options? Prices? Performance?

Long list and i'll miss a few i'm sure.

Screen Blaster out side about DM 59 from Overscan
Screen Blaster inside about DM 79 from Overscan
BlowUp I Hard Check with U.S dealers (won't mention any
BlowUp II Hard names here.
Blow Up FX 030 card Same here, about $250.00 U.S.
Speed Resolution card Hard & Soft GMBH price unknown
Nova ET 4000 card Computer Direct or Homa Systems, starts around
$460.00
ATI Nova card Same as above.

Looking through ST Computer magazine I see many accelerators available
for the Falcon that have never made it to an english speaking press
or dealer.

If ya got the bucks, go for the ATI Nova. Will only work with 4mb ST
Ram on a Falcon. Will work with fast ram if you got it.
Next in line go for the BlowUp FX (need to know how to solder and cuss).
Wait for Wizztronics Hawk :)

Mike

So I finally got myself an ST (for nothing, incidentally...), and I
managed to get someone back in Scotland to send me a copy of my absolute
favourite game of all time on the ST - Kick Off 2. Now, it worked on that
side of the Atlantic, but when I try booting it up over here, nothing. It
tries to tell me that it doesn't recognise the disk (everyone's favourite
error message). Any idea what might be up? I think that I am out of luck,
but if anyone knows a little trick then do let me know.

It's hard to believe you don't get this problem; I run into it on at
least 250f the pages I visit.

It doesn't behave like a RAM problem for the following reasons:

1. CAB.OVL indicates the image is only partially received.
2. The size of the image is irrelevant, could be 2000 bytes or 200,000.
3. When you press ESC, CAB will go on to load larger images from the
same page, then try to reload the images it missed and then stop at
exactly the same character in each as it did on the first attempt.
4. It doesn't matter whether this is the first site or the 20th site
you've visited, the same character in the same image causes the same
problem.
5. With version 1.41, you can watch the entire image download if you
look at the modem lights. CAB.OVL just stops passing the data back to
CAB.
6. The problem always occurs either at the very beginning (0/x) bytes
received or within a couple of thousand bytes of the end.

My personal opinion is that CAB.OVL cannot handle some very standard
JPEG convention. It thinks it has reached end of file and stops
acknowledging new data. Then when it fills in the frames created the
first time around, it checks to see if it has the correct file,
discovers it missing, and tries again.

I wonder if there is some connection between this problem and the way other browsers display a poor quality image and then come back and enhance it.

CAB is a wonderful program; this should not be considered a criticism. Rather it is an attempt to help the programmers understand the problem which makes some sites virtually unusable. Believe me, I know how important feedback is after spending 36 years developing computer systems.

```

Yep. There's an archivist working on the 8-bit section. There's no one maintaining the ST section. And that's the bottom line. Umich doesn't give a fig about us STers any more.

j>
>> Vote now for an animated CAB <g>
j>
j> That would be a great addition to CAB - as well as a working .JPG
j> viewer :-)

You know, I've *never* had this problem.

Are you sure it's not a RAM problem? I know that if I haven't got enough when a (any) picture is being converted it doesn't display, and afterward the RAM figure shoots back up, leaving enough space for the next picture to be converted and viewed just fine. This seems to be a problem with the nature of JPGs (ie that they're heavily compressed and need to be decompressed for display) than any especial problem with the OVL.

That said, I'd be much happier if CAB used the 1st Guide method of showing them...

Personally, I'd prefer if someone else recommended diskmags to me. I'm no judge and would give them all a bad review if it were down to me - every one of them crashes on my setup and I refuse to set up another machine just to view them.

If anyone has news on a new diskmag, send them hither and I'll list them for the benefit of people requesting my UKAAUG directory disk.

e> down some effort to develop Lattice C insteed of this toy.

There's nothing else like it. If they make a consumer product version of it
before anyone else gets on the bandwagon they have the potential of getting
it into every home and make millions from it. Lattice C doesn't quite have
that potential ISTM...

I view JPEG images in CAB all the time and have never had a problem - does it not work for you?

I just got the newer CAB with jpeg.ovl supplied and it worked first time.

Perhaps your jpeg.ovl is corrupt or something?

(I use MiNTNet rather than STiK if that makes any difference).

It does aparrently do this. And colour display needs more RAM that greyscale which needs more RAM than mono. So if you can't see them, switching to mono display in CAB might help. I only found this out by experimentation, so I may have it slightly wrong.

Are you sure ?

I use AHDI with two Minix partitions, I can have links.

I have 256 & 520 Mbyte partitions.

I am using a 4 Mbyte STFM.

Mike Goodman wrote:

> Are ZIP cartridges formatted on a PC compatible with ZIP drives on ST's or the Falcon?

This depends. PC compatible partitions on ZIP media (like on any other
media as well) can be used with TOS only if MagiC 5 or Big-DOS are
installed. In this case the Atari can use DOS compatible partitions of
any size. In any other case it won't work.
Of course you also need a hard disk driver that knows how to handle DOS
compatible media. Drivers that do are AHDI, HuSHI, HDDRIVER. Other
drivers might work as well.

459. HD-Driver problems

Newsgroup: comp.sys.atari.st
Date: 1996-10-07 00:00:00 UTC
From: Magnus Kollberg <emwoll@emw.ericsson.se>
Message-ID: <yvv3ezrduvj.fsf@emw.ericsson.se>
Source record: 136284

Hi,

I was just wondering if someone have managed to get HD-Driver (any
version) to work on the Afterburner040? It kind of works if I
use another driver (Hushi) and then install HD-Driver and reset the
computer. It will now use HD-Driver and it works, but if I turn of
the computer and tries to boot with HD-Driver it doesn't work any
longer. AHDI, ICD and Hushi works just fine, but not HD-Driver. :-(

It comes to the point that it prints out the version of HD-Driver
and then stops when it scanns for disk (or something). I use an
IDE drive but I think you get the same problem with SCSI disks.

Does someone knows anything? Uwe perhaps?

Source record: 136287

You can find two kinds of tosdump-programs in the context of STonX (an emulator for TOS on Unix and X-Windows). Because it needs a TOS-dump too, they've created the programs TOSDUMP and DUMPTOS (if I'm right, one works only for and with TOS 2.06, the other with and for all versions): Have a look at the STonX-Homepage and the Unofficial STonX-Page.

Greetings KR

JAKE GOERZEN wrote:

> 1) recompile MintNet to integrate into Magic

AFAIK the interfaces for lodable device Drivers are very different. It
is not that easy to build a new interface on a Device Driver.

> 2) write a nice GEM dial-up networking program to configure MintNet

This is more complicated than it sounds. Dip (the dialer usually used in
Unix environments) is not so easyly rewritten with a Gem Interface.

> 3) write a suitable CAB.OVL for it

This is a point that should not be the Problem.

Christof

er, no it wont. If it is running at 25Hz on an ST (with a wait vbl), it
could quite easily run at 50Hz (double speed!) on a Falcon.

They work exactly the same way on the Falcon.

t> Are the connectors different????

No.

t> What software is needed ???

Your hard disk driver software (HDDriver, SCSI-tools, AHDI, ICD).

t> Speeds? Experiences ....????

With my Quantum Fireball 1280MB EIDE I get an awsome speed of about 3MB/s and
with my 850MB Conner EIDE, I get about 2MB/s.
They work perfectly with HDDriver, but it seems like SCSI-tools recognises
everything above 1GB on the Fireball as bad sectors.
Don't use Western Digital HD's, as you'll have to boot from a disk instead of
from the HD. Western Digital don't use the bootblock the same way as all others
it seems.

Best regards,

Claes

Hi,
Which HD does he use?
I haven't been able to get anything above 1.2GB to work and I've tested some different drives, like Seagate, Western Digital, NEC, Conner. I'll try a Quantum 2.1GB next week, but since I haven't had any success before, I don't have much hope :(
I've tested both with HDDriver and SCSI-tools.

Best regards,

Claes

MP> holds more data (128 Mb when formatted) per disk and is faster
MP> at both accessing and throughput.

There certainly aren't any incompatibilities with the Zip-drive. I've used my Zip for a couple of months and I've never had any problems at all with it. Besides, the fact that the EZ135 isn't manufactured any more and will be replaced by a 230MB drive instead (which to my knowledge hasn't been released yet) tells me that the Zip would be a better choise after all (even though it's a little slower and holds a little less data).
If you need more than the 100MB - go for a JAZ drive (1GB) instead...

MP> And the EZ-135's dark grey
MP> case better compliments Atari's grey components. :)

Hmmmm - absolutely worth a though ;)

MP> Toad Computers can get them for US$129.00 (though they were

They probably won't be available until the new 230MB drive comes.

I believe I spoke to somebody a short while ago who was writing such a program,
but I can't remember who it was.

OTOH, it should not be very difficult to do, so maybe I will write such a
thing if many people are interested? Or has it already been done?

>Something else I thought would be cool...
>If maybe a program could be written that would change Page Stream,
>Calamus, and other popular document formats into html...

This, unfortunately, would not be very easily accomplished. HTML is
inherently incapable of producing pre-formatted output - the data is
formatted to suit the output device. HTML is also limited in many ways and
many (most) of the things that can be done with Calamus or Pagestream simply
can not be reproduced with HTML. The software would have to have some kind of
intelligence to work out how to set the document out in HTML in the form
nearest that of the original document, which I imagine would be very
difficult to do.

>This would make a GREAT tool for putting books and stuff online.
>To add refs, you'd load up a Page Stream doc...outline the object or

>bypass GEM all-together in early versions.

I usually find it easier to use to GEM than to write my own GUI. And
besides, all software that uses graphic output of an kind should use GEM,
except perhaps games where it may be unavoidable not to.

Well, I wouldn't worry to much about that. They haven't made the
44 Meg Syquest drive for years but cartridges are still readily avaialble
from multiple sources. If there's a market, there will be a supplier!

Does this not look like too few Memory? X uses a lot of Ram. I use the
console, but I can imagine, that if you got many drivers installed, then
X says good bye. Try to edit the MiNT.CNF to increase the debug Level.
Then MiNT will tell you a lot about what is going on inside. This may
help.

> Oh, one more thing; I understand I have to use mint_cab.tgz to access
> CAB...how do I uncompress this file? What files do I need to do this?
> TAF is .tgz but it uncompresses itself... Thanks again! :)

use

```
gzip -d mint_cab.tgz
tar -xf mint_cab.tar
```

gzip does compression and decompression of single files, and tar can put
multiple files in one (and v.v.). This seperation gives one the
possibilitz to use whatever one likes for each of the tasks. Originaly
the standard compression Program for Unix was compress. So effectively
we have a substitution in this point by gzip.

Hallo Robert!

Das Problem ist geloest. Ich hatte unter TOS 1.04 den Cab Ordner samt
Hotlist aif der 3. Ordnerebene liegen. Als ich dann alles auf die 2.
Ebene kopierte, war alles in Ordnung.
Bei mir zumindest darf CAB nicht so tief liegen.

Jetzt klappt es.

Hello Robert!

I've solved the problem. Cab must not put so deep in the structure of
directories. It doesn't work WWW/CAB/CAB.APP.
Now it works: CAB/CAB.APP.

I think it's a problem of TOS 1.04 which couldn't manage too much
directories.

There are tools to do that for QuarkXpress. The point seems to be, that
the Program uses mainly tables to format the Page. This is a possibility
to Force html vewers to do what you want. shurely you can not expect the
same results on a Browser that zou have on the screen.

Interesting. So it shouldn't be that hard to do a MagiC version of MiNT-Net
then? Cool.

Is there any documentation available on how to use device drivers under MagiC
in english?

BTW. Which is the latest version of MagiC 5?

Perhaps somebody could convert some of the videoconferencing software over to MiNT from Linux. There are drivers for QuickCams from Connectix and other software source code available too. Look back in the MiNT mailing list to see the info that I had previously left. Amigas have had web access before Ataris, they've been able to connect an Apple Newton to their computers and utilize it as a drawing pad just like Mac and PC users have been able to do. Now they will probably be able to utilize the Connectix QuickCam camera before us Atarian's could too. Again, the source code is free. Mega STe, TT, and Falcon computers can all utilize the Mac B/W QuickCam camera via the LAN port. Other Atari's would require the PC version connecting via the parallel port.

>
> dan boeseThat is a great Mac + emulator.
It works very well (even virusses and virus cleaners) !
You needed to have Mac Rom's (there was some trick for Eprom's)
I think the sound was not working in earlier versions.
The manual was great (for its humor).

You could read Mac floppies (880K) with it (for most 720K drives)

You could also transfer data with your ST.
You definitively needed an HD for working comfortabily and partition it
for the MAC (Syquest removable where great for that)
You also needed MAC boot files (finder , ...)

When it was first out, you had a MAC running faster (8MHz instead of 6),
with more pixels, with faster graphic processors ... and cheaper than a
genuine MAC.

If my memory is still good, it was first released as a MAC enhancer
(you bought a MAC, got the Proms, threw the MAC away, bought an ST and
the discovery box, plugged the proms ..) for legal reasons.

The superb Atari program Calamus is now available for the pc in all
it's guises. And it's relatively cheap and powerful.

I use it for Record/CD covers,posters,menus, brochures, etc.

>longer. AHDI, ICD and Hushi works just fine, but not HD-Driver. :-(

Yesterday I posted an article about a problem I was having with
HDDriver v6 on my Afterburner'd Falcon. The problem is that it
won't recognise a SCSI drive. I have been using v3.51 for the whole
time my AB has been installed without problems and from what I
gather from a fellow AB owner v5.x works as well.
I doubt the AB is the problem because it's patch boots after HDD,
though apparently the AB patches don't like booting of SCSI drives.

>It comes to the point that it prints out the version of HD-Driver
>and then stops when it scanns for disk (or something). I use an
>IDE drive but I think you get the same problem with SCSI disks.

During the several hours I spent trying to get HDDv6 to work I did
have a similar problem on several occasions. I ended up reinstalling
AHDI then HDDv3.51.

If you are using v6 then there must be a problem with it. If we
cannot resolve this I will send my copy back and try to get the
latest of the v5s.

Rich.

I just got a MegaSTe, and it's TOS 2.05, 720K disk. I'd really like to read/write 1.44M disks. What do I need, where can I get it, and how much does it cost?

Also, can you Mega-e users suggest some hot new items for this machine?

Thanks, as always.

> to big? The TAF-kit only uses about 5Mb anyway...

I trusted my memory on this one, sorry... The driver doesn't _have to_
be xhdi-compliant, but it helps. There are a few options that are only
available with xhdi-compliant drivers (Renaming partition ID and use
partitions beyond P), but minixfs should work with other drivers to.
Sorry, my fault...

But what's definitely correct is that minixfs and icd 6.5.5 won't work
together. Somebody said that 4.3 (And perhaps other versions too?) worked
with minixfs, but 6.5.5 (Which is what I have.) doesn't work at all.
Use another driver and your problems should go away.

: - What implementations of TeX exist for the Atari ST/Falcon? What are
: their respective advantages? I would like to have a quite complete
: LaTeX2e setup for a Falcon with 8 Mb RAM, 65 MB HD, Canon BJ300 printer.
There's CS TeX, the "free" version of which is frozen at 4.0, and the
commercial version of which is (was?) being sold by Maxon in Germany.
It's dead easy to install (download all the disks, run the install
program), and works very well. Lindner TeX may still be supported; I
haven't used it.
: - Is the speed acceptable on a Falcon?
CS-TeX is reasonably fast on my TT, and was OK on my 25 Mhz Mega ST, so I
would assume it would be reasonable on a Falcon as well. With a 2e setup,
the document class files take a bit longer to load and parse, but once
the LaTeX program files have been run by TeX, it chews through even big
documents at a nice turn of speed.
: - Is there any implementation of DVIPS available?
There's a verion of DVIPS which comes with CS-TeX. It works very well;
produces absolutely beautiful output on the school's HP 4's.
: Thanks in advance.
No problem...

: ^^^^^^^

: I don't know what's specific to that version, but mine runs okay on a
: 4-Meg ST. There's bound to be a Cannon driver. If you *really* want the latest
: version, perhpaps fit an FPU and get Linux. (Does anyone know it it's fast
: enough ?)

LaTeX2e runs fine on my 4-meg MegaSTE. It does use a little more memory
and CPU time than LaTeX 2.09, though. No need for Linux, because LaTeX
is machine-independant. It's written in TeX, as you may or may not know.

Unfortunately, the CS-TeX still comes with LaTeX 2.09, and I needed a wizard
to install LaTeX2e. But then, you may well be more intelligent than I am.
;-)

: >- Is the speed acceptable on a Falcon?

On a MegaSTE, LaTeX2e manages about 5-10 secs per page, but the .cls and
.clo files take ages... well, dozens of seconds. I do work with it,
but I'm not happy with its speed. On a Falcon, I would be.

: Yes. I ploughed the output back into GhostScript, and it checked out
: fine. (It comes with the CS TeX distro, which also comes with a nice shell.)

The CS TeX shell won't run with MagiC or MultiTOS, though. For that, you'll
need to be a ST wizard (a pal of mine got it running once) or get MultiTeX,
which is a commercial version here in Germany. It costs about 80 Marks
or so. Not sure if there's an English version. This also includes
600dpi HP Laserjet drivers, BTW.

Yours,
Erik.

CONTINUATION OF DISCUSSION...

-> > 1) recompile MintNet to integrate into Magic
->
-> AFAIK the interfaces for lodable device Drivers are very different.
-> It is not that easy to build a new interface on a Device Driver.
->
-> > 2) write a nice GEM dial-up networking program to configure MintNet
->
-> This is more complicated than it sounds. Dip (the dialer usually used
-> in Unix environments) is not so easyly rewritten with a Gem
-> Interface.
-> > 3) write a suitable CAB.OVL for it
->
-> This is a point that should not be the Problem.

Regarding point 1
I may be misunderstood, but I thought MagiC was based upon Mint.
Or that, MagiC has all the abilities Mint has. If it is possible to
write a Network Layer Kernel for MagiC base on MintNet, then I think
its' an idea to persue.

Regarding point 2
I realize porting software from one GUI to another can be a
problem, but If we look at it in simple terms we can eliminate the WAY
we do it, and concentrate on WHAT it does. The only reason we would
need a GEM network configure program is, because, everyone has a
different set-up. All it would have to do, is tell the networking
software which port to use, which protocol (SLIP,CSLIP,PPP,etc.), what
is your dial-up number, baud rate, and all the variables associated with
its' function. The congfiuration could be written to a simple ASCII
file and read at boot-up by the Network layer. I would like to see a
network layer have an enviornmental variable or a standard, so who ever
wished, could write a program to work with it flawlessly in a
multitasking system. I have the knowledge, resourses, and help to
translate any German documentation in to English if this would help in
development of my idea. I want to translate any and all text regarding
the MagiC OS. Starting with the MagiC developers guide. When its
available I'll post in this news group.

Regarding point 3
This is nice to hear!

Hi Folks,

We're stuck!

We've got:

Orat on a stick
Thermoweave Underwear
Astrochicken flight hat
Monolith decoder ring
Buckazoids
Invisibility Belt.

Situation:

We've made the moon visible and can get into ScumSoft but get zapped in the accounts dept. We have no keycard or "face" to scan for the security on the other door.

We can also mess with the pulleys in the Giant Mog's leg but haven't a clue what to do with them - can just move them around until the far one gets stuck at the left edge.

The scorpian is still wandering about and the cute creature in the glass case is still in there. Also, we have not been able to enter the other spaceship at the Monolith Burger.

What's the next step? Please don't say too much - just enough to get us going again please. :-))

The general rule is to terminate at two and ONLY two positions on the SCSI bus, at the beginning of the bus, and at the end of the bus. So if you insert a 2nd SCSI drive, it should not be terminated or you should move the terminator from the 1st drive to the 2nd drive.

Source record: 136171

Aloha,
I've got a Falcon with TOS 4.04...
I'm slowly learning that this TOS has some bugs in it.

What is the latest version avilable in ROM?
Where can I get it?

I do need TOS, as I use CuBase Audio...sorry...Magic alone wont cut it.

Also...I'd like it to be in ROM because some of the paint packages I use
requires TOS in ROM...some of the functions (the ones that make a paint
package useful!) don't work with TOS and RAM...and don't work with
TOS 4.01-.04.

Thanks,
Brian

There is a version of Cubase Audio for ST's that supports the CBXD5 and D3. The problem is that the DMA to SCSI interface requires a=
special adaptor which was very expensive and only worked on ST's, no STe's. haven't tried it on a TT so I can't comment on that.

All the best,
Chris @ Computer Direct

I originally tried to post this to the atari.announce group, but the moderator seems to be unreachable....

(-: I am happy to announce the release of NetBSD/Atari-1.2 :-)

What is NetBSD?

NetBSD is a Berkeley Networking Release 2 (Net/2) and 4.4BSD-Lite-derived system. It is a fully functional UN*X-like system which runs on several architectures and is being ported to more. NetBSD, as the name implies, is a creation of the members of the network community and without the net it's likely that this release wouldn't have come about.

I didn't know that it existed for Atari!

That might well be possible. Although it has been available since may 1995, this is already the second 'official' release of NetBSD that incorporates support for the Atari platform!

What hardware does it support?

Currently NetBSD/Atari runs on the TT030 and the Falcon. Supported devices are:
- The built-in SCSI host adapter
- Should support most SCSI disks/tapes/CDROMs/MO drives.
- The built-in video controller
- The built-in (720Kb/1.44Mb) floppy drive
- The serial2/modem2 ports
- The Falcon FX memory expansion
- The atari keyboard & mouse
- The centronics parallel printer
- FPU-emulation.
- X11R6 - mono & colour. Although not hardware, I think it's worth mentioning.

What's different with respect to the 1.1 release?

Apart from lots of bugfixes and enhancements to the general system, some new atari specific features were added:
- Support for SCSI MO-drives
- Parallel printer support
- Bootblocks
- Support for multiple keyboard layouts

Where can I get it?

The 'home' site of NetBSD is: ftp.netbsd.org . The NetBSD/Atari-1.2
release can be found in the directory: /pub/NetBSD-1.2/atari . The installation
guide can be found in 'kernels/INSTALL'. It contains all information
necessary to get you started, like which files you should fetch to start
installing the system.
ftp.netbsd.org will probably be pretty busy after the 1.2 release, but
it's always possible to get the distribution at a mirror site. The following
sites spring to mind:
ftp.uni-regensburg:/pub/NetBSD-1.2
ftp.funet.fi:/pub/unix/NetBSD/NetBSD-1.2

Where should I go for more info?

If you want more information about NetBSD, for instance general info on
NetBSD, mirror sites, mailing-lists and so forth, visit our www server
at http://www.netbsd.org .
One mailing list is of special importance to NetBSD/Atari, the 'port-atari'
list. On this list, you can ask questions that are specific to the Atari
port of NetBSD. To subscribe to this list, send email with body text
"subscribe port-atari" to: majordomo@netbsd.org .
I should probably also mention that you can get help by sending a body text
"help" and an overview of the available lists with "lists".

Good Luck,

Leo.

508. FS U.S /Atari ST items (revised list)

Newsgroup: comp.sys.atari.st
Date: 1996-10-08 00:00:00 UTC
From: Michael Grove <mgrove@owens.ridgecrest.ca.us>
Message-ID: <325A131B.51D6@owens.ridgecrest.ca.us>
Source record: 136174

Ok, i've realized the error of my ways. This is suppost to be a budget
system :). So i'll break apart a few things.

Item 1. 1040ST. Standard machine with no mods/hacks. TOS 1.02.
1mb RAM. Atari mouse, new Falcon keyboard. Good condition.
No monitor, software, cables, ect..
$50.00 plus $13.00 shipping (UPS ground)
money order paid up front (I have to many COD's out now).

Item 2. Color Computer Eyes Video Digitizer, software and manual.
May not work with STE. Digispec (converts Computer
Eyes .RAW video to 512 color format .SPC).
$25.00 plus $6.00 shipping (UPS ground)
money order paid up front.

Item 3. Video Key (Composite/RF/Audio out from RGB).
Works with any Atari that uses13 pin monitor cable.
ST Low and ST Med resolutions. Record to your VCR
or use TV as monitor. Will work with no monitor
connected. Manual.
$25.00 plus $6.00 shipping (UPS ground)
money order paid up front

Item 4. Spectre GCR with Mac ROM's (with Mac sys 6.x/
msword/excel/+ versions unknown) Monochrome
Mac hardware/software emulator for ST.
Disks, manuals and cables.
$26.00 plus $8.00 shipping (UPS ground)
money order paid up front

Item 5. PC Ditto II hardware Dos emulator card. Software,manuals.
Will work with a 1040ST, but fits better in a MegaST.
No STE.
XT compatible/CGA graphics-AT performance.
Complete. Used.
$25.00 plus $8.00 shipping (UPS ground)
money order paid up front

Item 6. EAB ST to PC 5 1/4 inch drive cable kit and software.
You assemble. Doc's and disk included.
$3.00 plus $3.00 shipping (U.S. express mail)
money order paid up front

Item 7. Tweedy Board. ST/MegaST. Used. Sound chip
already soldered on. Just plug it in.
$3.00 plus $3.00 shipping (U.S. express mail)

money order paid up front

Item 8. SAMS COMPUTERFACTS Technical service data manual
for Atari 520ST. Complete schematics, service checks
troubleshooting, waveforms, parts list/cross reference.
$12.00 plus $3.00 shipping (U.S. express mail)
money order paid up front

Offers or trades considered, but not necessarily replied to :).

^^

Don't hold your breath, the PC & ST parallel ports are not the same, the
ST is inferior. Makes porting this type of software far from trivial.

REALLY ! I got the impression that only HHDriver, HuSHI,& Claus Brodie's
driver (forget name) were xhdi compatible, AHDI is not. I remember a post
that said AHDI would not give the extra partitions in Bigdos because of
this very reason.

> > I have 256 & 520 Mbyte partitions.

Yes, the docs warn about disk driver bugs causing problems. AFAIK, you can
use the max partition your driver will allow. My 520 Mbyte is experimental
only.

See if your drive is properly terminated and if you activated the SCSI
ID of your drive in the HDDRIVER device configuration. Use the IDCHECK
program to check if the drive is recognized at all and to get the
drive's SCSI ID displayed If IDCHECK finds the drive, HDDRIVER will,
too.
And as always, regardless of the driver type or version you use: Install
a clockpatch in your Falcon if there isn't one already.

Do you mean the ENV variables like GCC uses?

How do you set them ?

Is use a program called GEMENV (was originally from Ian Lapore's Heat & Serve C). It works quite well. I had to set the env's to PC format to get them to work with GCC.

This is part of GDOS, which is not PD (AFAIK). GDOS is often supplied with
art packages. There is a German version called AMCGDOS, this should be on
umich.

There is no XHDI compatible version of AHDI. The only drivers supporting
XHDI are CBHD, HuSHI, hdpStack and HDDRIVER.

Are you talking about the SMD-100, mpeg-thingy from Hi-Soft?
I've e-mailed them and it seems like I could get the information needed to
control the device. The box works alone with an scsi cd-player, but
they'll also make it work by sending mpeg data to the device from
hard-disc or CD-rom, and get the graphic depacked in return. It seemed
like Hi-Soft could give out the necessary information about the box, so a
third part could make another controller.

: Since I sold my Atari ST 3 years ago (including disks) I'm looking for some
: old games (bubble bobble, california games, xenon - u know what I mean) to
: test them.

Since these are commercial games, it would be illegal for anyone to put
them on an ftp site. Even if the company doesn't sell the Atari version
anymore, or even no longer exists. (Even then, you can bet that someone
has the copyright on the program.)

You could try to buy the games second-hand. I have to give you one warning,
though: I have installed STonX myself, and it seems like it can't boot from
a bootsector. It needs a file system. This limits the programs you can use
to those that you can start from the desktop.

Unfortunately, this excludes most commercial ST games :-(

Message-ID: <APC&63'0'14e8c881'303@glas.apc.org>
Source record: 136186

Hi,

I bought ATARI ST 1040 in 1989 in UK. At that time there were a lot of users here in Russia. But now I know only one who still use it. There used to be Atari Club in Moscow but it is no longer exist. The first problem that I faced was that all software that I bought with computer can not be used with russian fonts. Due to I have changed VIP to LDW and Microsoft Write to Wordplus. Qfax is working only with capital Russian letter. The problem is that I'm just a user and not very familiar how all system works. Besides I can't find any book here.

Recently I have joint Internet. There is not problem with mail and FTP protocol but I'm helpless with WWW site. I went to FTP and found several program that I suppose have to help me. I took WWW130 package, Oasis and CAB. But it looks like I have not enough memory in my computer to use it. Is it right? At least when I clicked to Oasis. tos I got only 2 bombs on my screen. WWW130 have been unziped to 'D' disk and then I went to setup folder. The setup program proceed me only to the message that you have not date file. I copied this file to 'D' directory. It helped me to overcome first task with language applied but further I was stopped by message that there are not 'batchfile'. I was advised to UNZIP package again. I did it but it brought me to the same problem. Could somebody advise what can be done.

Also I will appreciate if somebody tell me where I can take NVDI v. 3.02 and >. I was told that if I would take it I can use Papirus word processing with russian letters. Is it true?

With hope to get help

I have got both MagiC 5 and a Afterburner040 with Fast-RAM, so I
should know. :-)

> But with the Afterburner there are beta versions of patches that
> claim to work with MagiC. So do any of you use MagiC with an 040
> equiped machine?

Well, MagiC does work with the Afterburner040, but not completely as
I would like it to. I havn't tried MagiC 4, so I'm not sure if it's
any differences between them. I have also only got the AB040 patches
which Doug Little has done so I don't know how the original drivers
will behave.

The problem is that you can't run MagiC in Fast-RAM. If you do, it will
crash as soon as it tries to read anything from the auto folder or load
a acc.

But you can do it like this (atleast it works for me).

You must have magxboot as the first program in your autofolder and
after that you load the AB040 patch Doug has made. Now will
all other programs load into Fast-RAM, but not the MagiC "kernel"
which makes ROM acces _much_ slower then under TOS 4.04 and this
makes MagiC 5 a bit slower than TOS 4.04. Not much, but a bit.

Anyway, MagiC then runs very nice and stable just like it did before
I got he AB040 installed. :-)

One things that will make it crash though is if you try to do a warm
reset. You must cold boot with MagiC everytime you want to reset or
it will hang the computer.

I don't know whos fault this is that you can't run MagiC from Fast-RAM,
but it does work if you run it from ST-RAM.

Maybe Andreas Kromke knows how to run MagiC from Fast-RAM?

527. postman under magic4

Newsgroup: comp.sys.atari.st
Date: 1996-10-08 00:00:00 UTC
From: Coolens Hugo <coolens@kiho.be>
Message-ID: <53dov1$jck@vivaldi.belnet.be>
Source record: 136193

I'm a registered user of Postman Lite, this is an Atari-version of Ghostscript, a package to display postscript files. Postman works fine under TOS2.06 on my St. However when I run it under Magic 4, Ghostscript looks for all its files in the main Postman-directory in stead of in the proper subdirectories. It is as if Magic 4 does not pass the right paths to Ghostscript.
Anyone else has simular problems with Magic?

regards,
Hugo

Darn, so where can I get the ST version of Edith Pro that was just made
as a free program?

Could it now be uploaded on other sites since the Atari page is closed
down? :)

Maybe it's the processor speed that makes things faster on the Falcon.
Putting all the stuff on the ST graphics screen with STOS and waiting for
a VBL is only the graphics bit. All the other instructions as well run
twice as fast since the 030 has a much quicker clock cycle.

So I guess a faster screen rate only makes things a bit smoother. :)

What version of GFA is it written in Stefan? STectre wrote a few shareware
or freeware compilers for GFA (names escape me at the moment). Else I
could compile them for you if you wish, I have v2 and v3.5 compilers.

```
There's a new version of CAB (V1.41a) available on my homepage.
New are only three bugfixes:

- No more crashes after printing (caused by a stack overflow)
- CAB used the wrong color table for GIFs with a global and a
local color table.
- CAB had problems to find CAB.OVL under certain circumstances.

Regards,
Alexander
```

>does it cost?

You need a 1.44 meg drive (under $40 if you don't care about the faceplate
matching the MSTe), probably an AJAX chip (price and availability ???) and
flip DIP swicth 7. I'd try that first and see what happens.

>Also, can you Mega-e users suggest some hot new items for this machine?

Well, you have the VME bus - if money is no object, first get either TOS 2.06
or MagiC 5, then look for a nice VME graphics card.

Me too!

> Ok Its here in front of me...so heres a long posting about it :)

I'll just comment on a couple of your points :-)

>opinion I would not be too pleased reading so many articles I have
>already read in Diskmagazines for free?, Full credit has been given to
>the diskmagazines for these articles etc, but.....

The idea with the Diskmagazine section is that we bring them to the
attention of people that don't already get disk magazines. I'm sure in time
that this section will change, how, I do not know. Some people have a bias
towards mags on disk, this was our way of trying to show that certain disk
mags are simply excellent, and try and broaden everyone's horizons.

> Anyway as I was saying, There is also a Q & A section in this issue,
>with the contributors this magazine boasts then I cannot see any
>question going un answered :), we can all learn from other peoples
>questions so this makes a good read,

I think this section, along with tutorials, will be one of the most
popular.

> There are of course advertisements from various companies, these are
>well laid out and in my opinion just the right amount, you are not hit
>in the face every other page with a full page advert, there are not
>too many, and not too few, just right :)

Simple fact is that both the magazine and the advertisers need each other.
If we get more advertising it means we can add extra pages for editorial.

> Worried for nothing, I was more than pleasantly surprised at the
>amount of software reviewed, the way it was reviewed and the various
>types of software reviewed, no preferences by anyone here, From
>serious GEM applications to simple games, there are all there, I give
>the magazine one hundred percent marks for there direction in software
>reviewing,

Having quite a wide spread of reviewers makes for a better coverage IMO. I use non-GEM programs myself, if they do the job well, no problem. But I don't like TTP programs at all, so unless 100 per cent necessary, I stay well clear of these. But AC does not have a bias towards GEM, our only bias is towards TOS computers :-)

> Ok....I will be back for more, and will re-subscribe, it is definatly
>worth the money and worth waiting for, a good read,

Very pleased to hear that you liked the mag so much. As you know we have now sold out of issue 1 totally! However, we have arranged a reprint, and these extras should be available in about two weeks.

Issue 2 is scheduled for publication in late November, and issue 3 in late January.

You need four 1 mb SIMMs, at least 120ns speed (not a problem, the most common SIMMs are 70ns), parity doesn't matter but make them all alike if humanly possible. 2, 3, 8, or 9 chips also don't matter as long as they are all the same. I would avoid the Panasonic SIMMs simply because I have been unable to make them work in my Mega STe.

>memory in my computer to use it. Is it right?

Vadim, in order to use STiK and CAB, you will need to boot with almost nothing else running - the 1040 has only 1 megabyte of RAM, which is barely enough to operate.

I would recommend that you try to get a later version of the WWW package - version 1.31 is available, and while the various parts for version 1.41 have been released seperately, I don't think they've been assembled into a complete package yet - I plan to wrok on that as soon as I can.

In order to manually install it, thouhg, do this:

(1) Unzip the STiK pacakge onto your C: drive (I am assuming you have a C: dirve here - if you do not, then this applies to A: instead). Put the STIKTSR.PRG into your AUTO folder and the STIK.ACC in the root (C:\); the other files can be placed in a STIK_CFG folder; there should be a file named STIK_DIR.DAT in the root, and it contains the path to your STiK config files (usually C:\STIK_CFG).

(2) Edit the DIAL.SCR and DEFAULT.CFG files to work with your service provider (ISP). All of the needed information should be provided by the ISP. Be sure that he has turned OFF the "VJ" flag for your account, because STiK needs uncompressed SLIP, not CSLIP.

(3) Create a CAB folder where ever it is convenient (usually on the hard drive sompleace, and it is best if it is in the root like D:\CAB). Unzip all of the CAB files, including the CAB.OVL and CAB_JPG.OVL, into CAB folder.

(4) Create a WWWCACHE folder, also preferably in the root of some drive (D:\WWWCACHE for example).

(5) Run CAB and set the paths in the pull-down menu, then save the confuration and exit CAB.

At this point, you should be able to reboot, log on using STiK, then launch CAB and start browsing the Web.

Good luck!

Erik is right. (1) MagiC-Mac includes an own desktop. And it's working fine too.
There's really no specific need. So I shouldn't have said, you must buy it.
I'm sorry. [(2) But although I like it] (3) You can get MagiC-MAC without EASE.

And Erik is right another time: No desktop war please.

Greetings KR

I think you can get the TOS 1.04 chips at Toad Computers to use in your
older ST. It is much better than using the TOS on a disk.

As for the language disk, you only need the Control Panel as it's the
only useful thing on the disk.

Does anyone know if it's on a site somewhere? Thanx

If it's for Windoze 95, then Gemulator has cornered the market.

But I would really like to see someone make an emulator that is made for playing ST games on it. Something to handle the hardware work as well and even read the copy protected disks(might need a custom BIOS like routine). I see free emulators that play 8-bit games on it, so something for the ST would be real cool. At least that's my thinking on the subject.

As for the TOS rom, there are dump programs but use at own risk.

Say, weren't you the guy who wrote Abomiball that was on a STF disk a while back? That's a real cool game! :)

I have a Connor 1.08 gig SCSI hard drive, 1 year old. This is wide-fast SCSI-2, but I have the adapter to make it work with the standard 50-pin SCSI ribbon cable. Works with ICD AdSCIS+ host adapter, I expect it will work with the Falcon and TT SCSI ports, the Link II, and Link 96; other hosts for the ST are unknown quantities. I'll fill up part of it with shareware and freeware if you like.

I need an STe. It must be in good working condition, including the DMA, serial and MIDI ports. RAM doesn't matter (I have more 1 mb SIMMS than I can ever possibly use). I'd gladly accept a Falcon with 4 megs RAM and no hard drive, or a Mega 4, or TT with 4 megs ST RAM or 2/2 RAM. This machine is to be used for software development, so it must be reliable.

Personally I'm happiest that there are a good number of fresh names in there
as well as the fuller involvement of enthusiasts who've been around for a
fair while.

Also, it seems rare nowadays to have an original diy hardware project in a
mag, so I was intrigued to see one in there. Nice start - lots of room to
improve too.

I bought a high-density upgrade kit from Toad Computers a few years ago.
It included a high-density 1.44 meg drive as well as TOS 2.06 and a chip
that I did not need to install. The kit also had installation instructions.
I paid about $150 for the kit and the drive has worked perfectly with the
Mega Ste.

d> resistors), or other commenatary.

Sorry, but I don't think you can do this, Damien. The 1Mb you have will
already be using the 2 banks available on the ST.

There is a circuit diag around which is supposed to allow the generation of
further "bank" signals by using address line A9 but I have made this and
found it would not work reliably as it introduced too large a delay into the
addressing circuits.

These chips would be OK for expanding 512Kb Sts to 1Mb as they could use the
spare CAS1 signal.

I started with a 512kB STM. The upgraded as follows:

16 256Kbit RAM chips on floating board using CAS1 to go to 1Mb

replaced motherboard 256Kbit RAMs with 1Mbit RAMs to get to 2.5MB

replaced floating board 256Kbit RAMs with 1Mbit RAMs to get to 4Mb

Whatever you do you always seem to end up with a boxful of 256Kbit RAM :)

Hi vl@info.ucl.ac.be, on 07 Oct 96 you wrote:

Hi Vincent,

v> I have a few questions for those of you who use TeX/LaTeX on their
v> Atari:
v>
v> - What implementations of TeX exist for the Atari ST/Falcon?

There are 3. One by Lindner and the others by Strunck and Pastex. All are complete implementations. The files containing the Strunk implementation usually start with CS.

To find them you would be best looking in a German academic ftp site although I have found them on many reasonably sized sites.

You will need a fair understanding of German as much of the documentation is in this. The program's themselves, though, including the shell, are available with english dialogues.

v> What are their respective advantages?

I'm afraid I have not compared them. I use the Lindner version and am pleased with its stability. There is also a BIGTeX by Lindner for use with large texts on a machine >1Mb.

I seem to remember that the Strunk implementations are more recent but I may be wrong :)

v> I would like to have a quite
v> complete LaTeX2e setup for a Falcon with 8 Mb RAM, 65 MB HD, Canon
v> BJ300 printer.

No bother! Your HD may be a little small if you run other stuff. Allow 10Mb for all the TeX files. I run a BJ-300 in LQ850 mode. LaTeX2e initialisation scripts are widely available.

v> - Is the speed acceptable on a Falcon?

Well, I run on a 4Mb STM and I'm quite happy except when using Metafont to generate new fonts - it's definitely coffee-time when this is running :)

v> - Is there any implementation of DVIPS available?

Errm ... would this be the postscript driver? Don't know, I'm afraid :(

I have started using Markus Pristovsek's DVI program rather than the screen/printer drivers which come with the TeX packages. It interfaces with them all, is GEMmed and, I find, far easier to use. I have looked in the

printer drivers supplied with this (v3.00) and can't find a PostScript on

s> Yes of course I use wait vbl?,
s> And your answer is incorrect, I am afraid you are well off target,
s>
s> A machine that runs a lot faster, will update the screen faster, so
s> how can it possibly run at the same speed ? <smile>

Because thats what WAIT VBL does.

Wait VBL waits for a vertical blank interrupt (or should do) which in low res
happen every 1/50 second or 1/60 (depending on sync rate).

So if your program loop has a wait vbl, it should wait for the Vsync signal
to happen before it continues.

The only way it would be different is if the Falcon was running at 70Hz

See you earlier,

Steven

>
>Does anyone know of an equivalent DTP to Pagestream in the IBM world. I
>am so used to using Pagestream. But I've had to start using IBM & need a
>good DTP.

For basic DTP you may want to try Lotus Ami Pro 3.0 or 3.1.
It has been discontinued but, you should be able to still find a few
copies on closeout. It's relatively small (by Wintel standards) for
what it does and is the closest match to Pagestream wrt to interface.

Hi All

I have just recently managed to get a BBS up and running on my STE...The
software I am using is Foresite and I find the software quite
awesome...Rivalling and leaving behind most PC packages....

If there are any Atari users out there who want to call the number is
643 476-7502 hours 8pm till 9am...NZST...
I only have the one phone line at the moment so can't run it 24 hours..

Are there any other sysops out there who could point me in the direction
of some doors somewhere on the net..I am looking for mainly strategy type and
maybe blackjack and chess but any would be appreciated at this stage..

577. Change of harddisk driver- how? (GEM/Mint/Minix)

Newsgroup: comp.sys.atari.st
Date: 1996-10-09 00:00:00 UTC
From: hallvart@sn.no
Message-ID: <325aea641326523@sn.no>
Source record: 136128

I've recently installed Mint/X11 on one of my partitions, which went fine, but when I've tried using Mint together with TOS 2.06/GEM I get an error message concerning partition D:/ Someone pointed out that it might be because Minix won't handle partitions over 200 Mbytes, or perhaps it was the ICD driver in conjunction with Minix...

Anyway, the point is that I understand the ICD software gives problems with a lot of "non-standard" Atari software such as Mint/Minix, and in order to make my system work better I'm ready to take the steps necessary...
Even if it means that I have to reformat/repartition my whole drive (luckily I have another harddisk which I use for backup).

So, my questions are:

-What kind of software should I use? Prefferably something which is free (I've already downloaded CBHD, AHDI and I know where to get hold of XHDI).
-What would I need to do to make my system fully compatible with all systems so that I don't have to reformat/repartition it again later?
-How do i do all of this? Do I need to have partitions under a certain size or something? Anything special I have to keep in mind?

My system: -a 4MB STE
-ICD Link II SCSI interface
-Quantum Lightning 540S harddisk

Up to now I've been using ICD's software which has been working perfectly for me (except for the case with Mint/Minix).

>program to check if the drive is recognized at all and to get the
>drive's SCSI ID displayed If IDCHECK finds the drive, HDDRIVER will,
>too.

The EZ135 has the supplied terminator block fitted.
When first installing HDDv6 it all looked OK. IDCHECK spotted the EZ
and the SCSI device menu in HDDRUTIL spotted it too. After
installing the driver and rebooting it would not recognise the EZ,
only the IDE. After altering the settings abit even the IDE was
ignored, further alteration made it so the machine wouldn't even get
past the initial HDDriver v6 message. I had to boot from floppy and
re-install AHDI and then re-install HDDv3.51.
I retried installing HDDv6 several times and even changed the SCSI ID
of the EZ and IDCHECK spotted it and even HDDUTIL did until rebooting
with HDDv6 installed.

>And as always, regardless of the driver type or version you use: Install
>a clockpatch in your Falcon if there isn't one already.

I have been using HDDv3.51 for a year now with no problems the last
couple of months with the Afterburner and clockpatch with no problem.

Thanks for the help Uwe but it really doesn't seem to work properly.
If I can't get this resolved I will return it to System Solutions
and try to get an earlier one that definately does.

Rich.

heh... That's a pretty old joke, that gets some kids breaking up. I know
it did with me years ago. Still does from time to time.

: I slept through an armored attack on my position out in the desert - no one
: was shooting at /me/ so it wasn't my problem. <G>

Desert Storm? Hmm... Didn't realize you were out there. Then again, I'd
have slept through anything. Heck, even guys pounding on our roof can't
even wake me up.

: Haunt the Goodwill - I saw an old Okimate 10 there yesterday for under $10;
: I'd have bought it, but it had the C64 interface. Ribbons come a bit high
: but quality is outstanding.

I haunt them all the time. There's one place that has consistently gotten
computer stuff, even some of the really old stuff. A 410 and 810,
including a B-Key'ed 400 and 800 were there. I'm sticking around to find
other stuff that's good. I have on occasion found some rather good
ribbons, including typewriter spools. If you can find another kind of
ribbon, that's 1/2 inch nylon, the continuous kind, then you can do a bit
of spooling yourself, though a little messy.

One thing I'd definitely like to see are hearing aids, if they still work,
provided they're not too expensive. A check at my local hearing aid
dispenser and audiologist reveals an Oticon E39P is $700.

Actually, Bad Mood may have some screen modes up to 100Hz... yesterday I had it
at 90... (160x100xTC, 90Hz, full screen multi-sync sVGA)

>Maybe it's the processor speed that makes things faster on the Falcon.
>Putting all the stuff on the ST graphics screen with STOS and waiting for
>a VBL is only the graphics bit. All the other instructions as well run
>twice as fast since the 030 has a much quicker clock cycle.

Yep - correct. With Heartland, the screen is updating (physically) at 50Hz,
but the game loop is going at about 25Hz. When Tony say that the screen is
being updated faster, he means that the actual contents of the screen is
being changed faster. eg. On the Falcon, the main sprite changes every frame,
where as on an ST, it updates every two frames.

>So I guess a faster screen rate only makes things a bit smoother. :)

Yea, the 70Hz (or whatever) doesn't make a huge difference if the game
is not executing one game loop every vbl...

Anthony

My MegaST keyboard is too unreliable and replacements are too expensive.
Would it be easy to adapt a 1040ST or 520ST keyboard (or, even better,
an IBM keyboard) for use on a MegaST?

Why not using a standard Syquest with 270MB? It's faster and buying cartridges in future should no problem because the SQ3270 is a standard drive for DTP purposes.

Greetings,
Thomas

I found a program called fastboot, which does what you want. It
bypasses the IDE search and the memory test. My Falcon now boots
very quickly. Can't remember who wrote it, but I think I got it from
Hensa.

Source record: 136154

I own an old ATARI 520 ST. I uncovered it the other day when I was cleaning out my attic and decided to set it up for my kids. MY PROBLEM -- I found everything to make it run except an important item -- the TOS SYSTEM DISK and the ST LANGUAGE DISK.

My machine is prior to those built with the operating system in ROM, so I have
to boot up with the system disk to make anything work. The machine has no hard drive and I boot up using the ST single-sided floopy drive that came with the machine.

So, can anyone tell me how I get my hands on a copy of the two aforementioned program system disks.

Please help if you can, thank you!

Source record: 136157

Magnus Kollberg (emwoll@emw.ericsson.se) wrote:
: Maybe Andreas Kromke knows how to run MagiC from Fast-RAM?

I think the problem could be that MagiC expects the FastRAM to be
located at address 0x1000000. And MagiC only handles the MMU if there
is a 030 processor (as far as I remember). The MMU has to be initialized
in order to prohibit the I/O address range from being cached.
The only 040 computer I have access to is a Macintosh, so I cannot
fix any bugs that might exist.

>discovers it missing, and tries again.

Stik and Cab.ovl act in the same way with jpegs as any other binary
file cab itself decodes the jpegs. s

>I wonder if there is some connection between this problem and the way
>other browsers display a poor quality image and then come back and
>enhance it.

this is interlaced GIF..

>CAB is a wonderful program; this should not be considered a criticism.
>Rather it is an attempt to help the programmers understand the problem
>which makes some sites virtually unusable. Believe me, I know how
>important feedback is after spending 36 years developing computer
>systems.

Its a problem we all know about its just tracking it down.. which is
made harder by the constant evolving stik into a full tsr and seperate
dialer.app once this slows down we will have a chance to find it.

HTML 3.0 ? why its old.. 3.2 maybe and cab supports most of the
important stuff already.. more added all the time..

>3. Build interlaced gifs on screen...and display text as it gets it.

This one I would like as well :>

>4. General Speed improvements

The latest cab 1.4a is much faster at formatting pages than the
previous versions.

>5. Full client side image map support. (this might work...haven't tried)

Already in working fine..

>6. FTP-Mail-NNTP

Got a beta FTP for cab..
Mail.. do you mean a full mail program? If so I disagree this should
be a seperate program if you mean mailto then cab already supports
this.
NNTP... well I heard rumours of somebody making a news program for cab
but nothing more. I prefer the seperate program approach myself.

```
Hi,

I just wanted to tell everyone who has got an Afterburner040 or
a Barracuda (???) that there is a new mailinglist set up for
these machines by Johan Klockars. Please not that it's primary
set up for Falcon040 owners so irrelevant stuff should stay out.

The list is maintained by Johan Klockars of MGIF fame. ;-)

Anyone can now join the list by sending email to
falcon040-request@rand.thn.htu.se
with the word 'subscribe' as subject.

Actual postings to the list should go to
falcon040@rand.thn.htu.se

We hope that anyone who has got an Afterburner040 will join this
list and please tell others about it if they can't access the news
groups.

Hi All

I have a couple of computers I am considering upgrading and I was hoping that somebody out there in Atari Land could advise me as to what advantages I obtain through the upgrade, or possible disadvantages, ie. new Bugs, incompatibilities etc.

The machines I am considering are:-

STFM 4Meg, current TOS 1.09, No Blitter.
STe 4Meg, current TOS 1.62, Blitter Fitted.

In addition can anyone recommend a good source for the upgrade chips.

I Have an atari 520stfm and in all honesty dont know much
about their systems was wondering if someone knew of a list or a
place that has a listing of all atari st series/tt/falcon that has
feature differences ,advantages,disadvantges, etc... thanks for your
help..

by the way i have asked several x-atari users the seem to think
its a regular 520 with rf modulator out, I know that its not like a
520, it has both a floppy and powersupply built in instead of the brick
and external floppy.

Also does anyone have for sale or if they were even released for
the st, Rogue(epyx) Ultima I,III,IV(allready have II)
Startrek:TS(arcade port),

616. Re^2: EIDE hard disks on a Falcon - HOW????

Newsgroup: comp.sys.atari.st
Date: 1996-10-10 00:00:00 UTC
From: claes.holmerup@p5.dada.ct.se

Keith Hasama wrote this to Claes Holmerup about EIDE hard disks on a Falcon - HOW????:
KH> : Don't use Western Digital HD's, as you'll have to boot from
KH> a disk instead of : from the HD. Western Digital don't use the
KH> bootblock the same way as all others
KH> : it seems.
KH>
KH> My IDE (not EIDE) 540 MB Western Digital hard drive works fine
KH> on my Falcon. I use AHDI.

Maybe only a problem with the newer EIDE-drives then? They simply aren't able to autoboot - you have to boot from another HD or from the diskdrive :(Otherwise they work fine...
By the way - I tested a Quantum Fireball 2.1GB EIDE yesterday and it worked perfectly with HDDriver 6, while SCSI-tools 6.5 couldn't cope at all (I wouldn't even dream of trying with AHDI/HDX...).

Best regards,

Claes

Xcontrol was designed with TOS 2 and upwards in mind as far as I recall, so you might get problems with certain CPX modules and/or the Xcontrol panel itself with older TOS versions. (It worked fine with me when I used to have TOS 1.62 though), but I'd recommend this person to upgrade to TOS 2.06 if he's going to install TOS in ROM chips in his ST anyway.

I think a TOS-card would be needed though, but while at it, a TOS-card with an IDE harddisk controller could be purchased instead of a plain TOS 2.06 card as these cost about the same, and an IDE harddisk can be installed as well! (if a 2.5" is used it can be installed inside the machine).

Unfortunately, the City and the Dungeon were the only 2 modules
ever created for Alternate Reality. Definitely a game ahead of its
time.

Aha, now I know why mailto doesn't work with my cab/mintnet setup.
Is there any change that the mintnet overlay has problems with
sites with a numeric address (e.g. http://193.190.205.13/Popo/)?
With my current setup I'm unable to visite such sites. For the
moment I use MiNT v1.14, MiNtnet v1 (?), Cab v1.41 and
cab-for-mintnet-177.

Point of order, Mister Speaker! <G>

Interlaced GIF and progressive JPEG look the same to the end user; obviously,
the encoding/decoding is different, but Joe USer can't see that.

I'd recommend going with NeST right away, as you would not have to work so hard to get your QWK packets (if that's how you want to do it); it's quite possible right now to become a private node and connect to NeST via email.

I use Xcontrol with TOS 1.0, 1.2, and 1.4 on a regular basis. No problems
unless you forget to shut it own befoer a rez change.

I'd definitely recommend TOS 2.06 in any case, though. However, if MagiC is
to be used, the TOS change is a waste of time and money.

OS-9/68000 for Atari ST

Original package, registered copy, from Microware, all complete with manuals:

- OS-9-68000 v1.0
- C compiler
- Basic09 (compiler/interpreter)
- Pascal
- other things (SCRED, debugger, etc.)
- various software (EMACS, TeX, etc.)

OS-9 is a multi-tasking, multi-threading, re-entrant code OS with a minimal kernel. It is designed for real time applications. There is a GUI available for it. Look at http://www.microware.com, or something like that...

It looks like Unix a lot but requires much less ressources.

My version is quite old but I suspect that the new versions did not change a lot, since it is basic OS. GUIs gets to run on top of it and I don't have one.

Have a look at Microware to see if you could use it. It'll be cheap, so I would prefer a trade. I'll send you a list of what I am into so you could see if you have something to trade with me.

Damir:

Yes, you can use a PC mouse with an ST. However, you have to use a
serial mouse and it will take up your serial port. Also, you need a
serial mouse driver, which I believe is available as freeware online.

632. TOS'd Off!

Newsgroup: comp.sys.atari.st
Date: 1996-10-10 00:00:00 UTC
From: Mark Gardiner <100550.3170@CompuServe.COM>
Message-ID: <961011013145_100550.3170_EHK31-2@CompuServe.COM>
Source record: 136033

OK,

I've a standard 1040STf which I think has TOS 1.4 (could be 1.2) as I have differing readouts with different diag apps...

I'm going to upgrade the RAM to 4Mb and thought about upping to TOS 2.6 in a switchable module but, what do I gain by doing so?

The machine has only the DSDD 720 drive so any desktop functionality is going to be limited... what apps make use of any added features in TOS 2.6 and perhaps someone could spell out what these features actually are...?

Many thanks

Mark.

633. Atari Hardware for Sale

635. FS: Falcon 030 stock w/85MB hd + 540MB IDE

Newsgroup: comp.sys.atari.st
Date: 1996-10-10 00:00:00 UTC
From: Jim Montoya <jm@visionform.com>
Message-ID: <325D798A.703@visionform.com>
Source record: 136036

I don't want to do it, but time to move on.

I have an Atari Falcon 030 in good condition with orignal USA
configuration. (4MB RAM - 85 MB Hard Disk)

I also have an internal 2.5" 540 MB IBM IDE Hard Drive. I was not able
to get it working with the ICD drivers I have, or the Atari drivers.

Other extras that you might want include, 600MB full height 5.25" SCSI
drive in 3COM server enclosure. The enclosure has a heavy duty power
supply with large cooling fan.

Let me know if you are interested and/or make me an offer...

Computer includes all manuals, disks, cords along with brand new Atari
mouse. Video adapters for SC1224 and VGA monitor also included.

I have a few Atari 1040s available in various configurations as well.

I also have various Atari 8-bit parts + software available.

jm

Well, since we seem to be on the same board, and I happen to live near a
large city, with seemingly hundreds of internet providers in heavy
competition, (and a freenet!) I can upload Heardland and anything else
you could possibly want off the 'net to this board no problem... :)

I still play the City on my STe quit a bit but the Dungeon module I have is
for the 8-bit systems like the 800 I have in my closet gathering dust.
I'd like to know if the Dungeon was ever programed for the ST series??
I played it and finished it on the 800 but that was many moons ago.

Yes, try 525. It's shareware and you can get it via FTP from several
servers.
It's doing all the conversion stuff between 5 formats in every way.

Re crashing of LZH archives - I found the same. Most files from bulleting boards crash, and PKFIX isn't much use. But if you try a different archiver, such as LHARC3.10, which was on ST Format Wonder Disk70 , they all unpack nicely. It seems to be slightly nonstandard.

Wouldn't it be possible to use the XHDI protcol to do what you want to
do? I have HD Driver v4.61 and the manual explains with some examples,
how to program your own low-level routines. Most up to date drivers
support XHDI. I don't know, do flatbed scanners communicate like SCSI
devices?

I have a Maxtor EIDE 1.6gb drive and HD Driver will boot it just fine.
AHDI will not work on this drive, nor will ICD Pro.
I did have a Fujitsu 1.06 EIDE (it died) and AHDI and ICD Pro worked
fine. HD Driver would not work well with this drive. SCSI Tool could set
it up, but HUSI had problems as well.

Does anybody really multitask with Atari?? I mean I have mint and Multitos, but I can't work with it longer
than ten minutes!! Most of the applications don't work and I always end up reseting my Falcon... Is there
a version wich REALLY works?? What do ya all know about Magic?...
Oh!! by the way... does anyone know about a browser for the Falcon with PPP conection? There is only one
server with SLIP conection by my area, but it is quite expensive!

thanx...

I have several EZ135's (4 of them) and can get carts no prob.. There is
more than
one manufacturing the carts... A local Elek-tek has huge baskets of them,
and I
pick up a few every time i stop in...

I just installed MinTNEt onto one of my Falcon drives ..

When Xwindows starts it only appears in the left hand quarter of the monitor
... what can I do to change it to work properly?

I can run Tcsh ok, no problems there .... it's very peculiar!

This is from the TAF kit for Chimera btw ....

I would like to know more of Atari ST -emulators for IBM PC's.
-How good are they?
-Is there a list of compatible software?
-Are they free-, shareware or commercial?
-Where you can download them?
Many thanks for your help, j-p

>643 476-7502 hours 8pm till 9am...NZST...
>I only have the one phone line at the moment so can't run it 24 hours..

Before moving to a separate line, I ran my BBS on my voice line full-time
by using a ring-back program in the AUTO folder. The BBS was set up as
normal but RING3 intercepted the RING signal from the modem and, the
first time, lowered the DTR line so the Binkley Term didn't answer. That
meant voice calls got through uninterrupted and all computer callers
needed to do was call, let the phone ring twice, ring off and call back
within 30 seconds.

It's only a small archive, RING3.LZH, and is available for freq from my
system, 2:2503/105 in Fidonet, 90:103/102 in NeST and 51:502/4 in
Atarinet or +44-332-662988 for non-mailer access.

Glad you liked it ;)

In a few issues time I might submit another DIY project for the Enhanced Joystick Ports - anyone for the infamous Tempest 2000 rotary controller (I've got a partial solution to the low resolution problem now) - or I might be able to come up with an adaptor to work the other way - I.e. to allow joysticks to be used as joypads. That, of course, throws up the problem of the number of buttons...

Cheers,

Xav

P.S. Best Electronics were selling a lead to do the same job as my adaptor for eleven pounds! Mine costs under 4.

--

HELP! I've got Kandinsky V2 and NVDI V4, and tried to print a Gantt chart for a project report last night on my BJ10ex. It fed most of the sheet, then simply printed the last couple of cm. Changing the driver resolution, etc. just made it print between 2.5 and 1.5 cm of the page.

Since I only wanted a draft, and had planned to print to disk using the HP Laserjet 4 driver, for output at university, I didn't worry too much until I found that print to disk with every driver I tried produced a <100 byte file which just did a form feed.

Ultimately I re-installed Speedo 5 (which I had dumped in favour of NVDI following lots of advice to do so) which printed okay, but the quality was not as good as NVDI, and I can't do a print to disk. The report is due tomorrow, so I don't have time to install a print buffer to capture the speedo output, or anything like that.

BTW I also switched off _all_ DA's, etc (basically just the ST-Guide stuff) except Xcontrol (since I needed access to the NVDI cpx's). I have a Mega STe with TOS 2.06 and 4 megs of ram.

I assume this is a problem with NVDI, since the chart would not print when imported into Works, under NVDI, but did work with Speedo.

Any _rapid_ help would be extremely gratefully received.

Cheers,

Xav

Sorry, I should have made this more clear. The ZFC _ATARI_ pages
will be closed (that is the Atari directory with links to various
web pages, ftp sites etc.), but the Edith pages will obviously not
be removed, and they still include the free ST/TT version.

You're best bet is to hunt down a shareware program called "525" - it converts between a whole bunch of file formats, and has quite a slick interface. :)

Try your usual FTP sites, or I can E-Mail it to you if you prefer.

>Because thats what WAIT VBL does.

Yes, but only if the program loop executes in < 1/50 (or whatever) second.
In heartlands case, this is not true, unless run on a falcon, so on an ST
the game-loop executes once in two VBLs, but on a Falcon, once in one VBL.

>Wait VBL waits for a vertical blank interrupt (or should do) which in low res
>happen every 1/50 second or 1/60 (depending on sync rate).
>
>So if your program loop has a wait vbl, it should wait for the Vsync signal
>to happen before it continues.

Yes, but what if it missed a Vsync while it was doing something else (like
working out whats happening), and so waited for a second VBL?

>The only way it would be different is if the Falcon was running at 70Hz

Nope.

(see above)

You are correct - IF THE LOOP EXECUTES FAST ENOUGH, but this is not always
the case.

Nha, I don't think so as I will probably be able to count the subscribers
on the 040 list on one hand! But it makes it a bit esier to reach the few
choosen. :-)

> >set up for Falcon040 owners so irrelevant stuff should stay out.
>

>
> hehhehe.... :)

What do you mean with that? Do you mean that I'm not sticking
to the subject on the Bad Mood list? nhhhaaaa.... I didn't thought
so! :-)

As you have probably noticed, I havn't bringed any GEM-DEU with me, as
I hadn't got the time to even switch on my computer yesterday!

Have you tried cleaning the key contacts on the keyboard PCB? It's a bit of a fiddly job what with all the rubber "mushroom" switches but, in less than an hour, you may have it back in good condition.

682. Ghostscript environment problems

Newsgroup: comp.sys.atari.st
Date: 1996-10-11 00:00:00 UTC
From: hallvart@sn.no
Message-ID: <325e903cbe0e8@sn.no>
Source record: 135926

I'm having problems with the GS environment variables again (I somehow got it to work before, but I've re-organized my harddisk now, so I have to set the paths again).

What happens is that when I try to run GS.GTP I get a message saying "Can't find 'gs_init.ps'. I can't figure out why, because I've set the paths up to the "ps" directory where that file is located.

Here's what I've written in the "stgs.rc" file regarding environment:

```
setenv GS_LIB=.,d:\utility\viewers\gs\ps\,d:\utility\viewers\gs\fonts\
setenv GS_HELPDIR=.,d:\utility\viewers\gs\help\
setenv TEMP=c:\tmp
```

I've also set up the same variables in my environment program in the Auto/ folder, so it should really initialize the whole system with these variables.
I've tried running it with/without my environment program, but gs still won't find that "gs_init.ps" file.
Can someone give me a hint to what might be wrong?

The language disk is no problem, Roger (although it's pretty useless), but finding a bootable TOS disk can be tough. I should think there would be lots of people who have TOS 1.0 or 1.2 chips that they'd part with cheaply, though, and that would free up about 130k of RAM for programs, too. I have a set of TOS2.05 chips, but you have to get an adapter board to use them, which pretty well negates the whole concenpt of "cheap."

Yes, I know what you mean- it's the same thing here.
But in the mails you receive it does say something about "if you don't want
an automated reply...."
I can't remember what exactly it says, but it has something to do with
including a command or something in that test posting which the computers
interpret as "don't send a message back to this person".
Check your mails if you haven't already deleted them.

Cardinal has a very poor rep in the professional communications industry due
to compatability problems. All I can say is "good luck." You might consider
dropping your port speed on the BBS to 19200 and see if the problems go away -
it's possible that the Cardinal can't handshake reliably at higher speeds on
incoming calls.

I have an Atari Stacey I'm selling for Parts, to be sold for parts. Not to be repaired. If you wan't to try to buy it to try to repair it? I'd advise against it. It is one of the first ones off the Assembly Line, without batteries. It's Switching Power Supply has been tested & works fine. The Stacey Switching Power Supply can Run in the U.S. or Europe on 110 or 220 Volt. These Power Supplies Regularly sell for $100 U.S. The Stacey without the Power Supply goes for $175 U.S. Dollars. Stacey with Power Supply goes for $250 U.S. The Power Supply won't be available for sale until after the Stacey is sold. Unless, of course, It's sold with the Stacey. It's a 4 MB Stacey with Hard Drive. Please direct all Replies Through E-Mail to: bensmith@teleport.com or call Ben at (503)256-9974.

First, XaAES is not shareware, and it does not alone give you multitasking.

It is simply a multitasking friendly AES which works with the MiNT multitasking
kernal. It is developed by a number of people and is freely available.

>But could anyone help by pointing me in the direction of a suitable ftp site

I have not kept up with earlier posts on this thread, but it appears that
you are unsure about how to set environment variables when using MiNT.

Environment variables can be set in the mint.cnf file in the following
manner:

setenv name value

e.g.

setenv PATH .:/bin:/usr/bin

This will set the value of envoronment variable "PATH" to ".:/bin:/usr/bin".

Why not?

> So why should "all" programs that have graphical output use GEM ?,

Everyone has GEM (it is built into every Atari TOS machine) so everyone can use your GEM program.

Programs can hapily co-exist multitasking under GEM (unlike non-GEM software where single-tasking mode, resolution changes or even reboots are needed all the time).

I find it really useful to be able to drag objects from one program straight into another, for example. Do you actually prefer having to load one program, generate some data with it, save, reboot (maybe), change resolution (maybe), load another program, suddenly find that the user interface is all different, load the data in, do something with and repeat the process? Such nonsense is easily avoidable, by sticking to GEM! I am speaking from my every-day computer experiences here.

And you can say "well, GEM is slow". Slow?? As you have said previously, for some eight way scrolling arcade game GEM perhaps is a little slow - but for almost everything else, GEM would not make any difference to the speed. Of course very old GEM does tend to be a bit slow, but people have newer fast GEM versions now.

The main point is:
* It is very easy to use GEM (from a programmer's point of view).

* It is very easy to use GEM (from a user's point of view).

* GEM keeps a consistant user interface between applications.

* In almost all application software, there are not disadvantages in using GEM.

* In almost all application software, there are big advantages in using GEM.

So why not use GEM? Why reduce the usability of your software for no reason? Why make it inconvenient for "power users" to use your software?

I don't like to go on and on about it, but I still see software appearing that does not use GEM when it should, and this needs to stop.

This is one area where, for example, the Macintosh has a big advantage over the Atari - Mac programmers seem to be sensible enough to stick with the standard and make their software better because of it. If only programmers on the Atari TOS platform were sensible in this regard also.

All this is "my humble opinion" of course, but I still believe people should listen to it and see the sense in it :-)

The good nes is that you can have PPP with CAB right now. The bad news is
that you have to use MiNT to do it.

>Here in Vancouver, Canada, I simply cannot find an ISP

Yes, that's GEM.

Well, I'm pretty sure how to set them - I'm just not sure how to make TOSWIN
and such pass them along.

Your FDI connects to the Falcon DSP port, while the FA-8 connects to
the FDI. I believe the connectors on the FDI not going to the DSP
port match the connectors on the FDI. Originally, there was a
small ribbon cable that came with the FA-8.. evidently you didn't
get yours?

Did that, but once it gets to the AES 4.1 desktop I get a "Please insert
disc _: into drive A:" alert/dialog, (yes, that was an underscore in the
alert/dialog) and it freezes up. (I can sort-of move the mouse pointer,
but clicking on anything [including the alert/dialog button] does nothing.
I have to reboot)

My system is a TOS 3.05 TT with 20 Mbytes of RAM (4+16).

From: p-abel@imaginet.fr
Message-ID: <845160684_OASIS_@imaginet.fr>
Source record: 135949

So ...

I have put the PPP kit 1.4 on ftp.cnam.fr in pub/Atari/Mint/pppkit14.zip

It is a package based on FreeMint 1.12.5, MintNet 1.0 pl 1, pppd 2.2.0,
Cab-for-Mintnet 1.77.

It needs 350 ko on the boot partition, 1.3 Mo in a folder where you want, and 2
(maybe more ?) Mo of memory.

No Minix partition !!!!!!!!!!

In this kit, you'll find a complete installation documentation in english and
french. Not as easy than an installation software, but ...

In addition, you'll need Cab 1.41 and Hs Modem 7.

Waiting for your reactions :-)

The reason that Mac programmers stick to the standard religiously is based
on one fact! Mac User refuse to buy any software that violates the standards.
Period! When a Mac review says that a piece of software violates the Mac
user interface Standard, that software is DEAD! We let them get away with
it because we can't be as choosy as the Mac users! Kinda have to take what
we can get! Way back in 85 and 86 there as an excuse for the difference in
the way programs interfaced with the user as everyone was still feeling
their way, take a look at the way Neochrome uses 1 icon and the left and
right mouse buttons to do 2 different jobs, after a while most programs
just seemed to disregard the fact that the right mouse button was there at
all! Thing just evolved! There is no excuse for not following the
standards now!

I'm currently hunting this package down ATM. At least some of it is on

ftp.uni-erlangen.de:/pub/atari/tex/dvi/dvi

but the version there seems incomplete (although I'm not sure, it's a
very slow site to connect to from Demon (like many others) and
frustration usually gets the better of me before I've had a chance to
hunt through all the directories. Another useful site is:

ftp.tex.ac.uk

Which holds one hell of a lot of stuff for most implementations of TeX
and is easily searchable. Get the TeX-FAQ from there, it's
indespensable.

Hope this helps, Gaz.

710. AI on ATARI?

Newsgroup: comp.sys.atari.st
Date: 1996-10-11 00:00:00 UTC
From: Karsten Reincke <kreincke>
Message-ID: <53llc0$g75@deimos.rz.uni-osnabrueck.de>
Source record: 135954

I have some questions to AI:

Where's the artificial intelligence on ATARI? Particulary I'm looking for knowledge representation systems for creating expertsystems, running on ATARIs. And (if such software doesn't exist) what other kinds of software belonging to AI is (still) reachable (except ELIZA)? And is there any special group discussing these problems refering to realize solutions on ATARIs?

Perhaps anyone knows, where I have to look for or can give me some names or adresses. I back your pardon, if this is a silly question, I'm of natural intelligence.

Greetings K.R.

Try Toad Computers, they have a lot of Atari software and hardware. I
believe they still sell the adSCSI interface, at least they did in the
last catalog and I think it was $99.00 + shipping of $5.00.

Cross-posted to: comp.sys.atari.st,rec.music.makers.marketplace

FS: Atari SM124

For Atari ST computers.

Highres paperwhite monitor (640*480 at 70 Hz refresh).

Rock-steady display.

Great for MIDI sequencing (Notator requires this monitor!) or DTP.

Asking $60 + shipping or best offer.

OR trade for latest Atari or Mac Cubase (3.1?) + shipping.

>Well, as I said 5.24 doesn't wok on my AB040, but I guess I could try some
>other versions as well.

I have done some more testing and may have worked out the problem
with it.
My Falcon has an IDE and SyQuest EZ135 and also an Afterburner
fitted.
With HDDv3.51 already installed and then installing HDDv6 every looks
OK in all the configuration process. On rebooting the EZ135 is
ignored and only the IDE is used. If I configure the SCSI
arbitration with the Falcon as ID:7 rebooting shows that the Falcon,
as a Falcon040, is spotted but the EZ ignored still.

With HDDv3.51 re-installed and all the Auto folder programs prevented
from booting, including the Afterburner patch, I went through the
HDDv6 installation proceedure again. Not booting the Afterburner
patch means that the Falcon becomes an 8MHz 68020 powered machine,
according to the cookie jar. This makes me wonder how HDDv6 spots
the Falcon as an 040 before the Afterburner patch is booted.
With HDDv3.51 booted the EZ135 is operational.
This time choosing the 'SCSI device' menu gives a message that the
device does not conform to the SCSI 2 standards.

My guess is that without the Afterburner patch installed HDDv6 does
not recognise the EZ135. And because HDD is always booted first,
as it should be, there is no way that it will work with the EZ135.
Seeing HDDv3.51 works OK it must be possible.

Does anyone else (Uwe) have any thoughts on this?

Rich.

Message-ID: <199610111330.a7128@do2.maus.de>
Source record: 135960

MK>longer. AHDI, ICD and Hushi works just fine, but not HD-Driver. :-(

HD-Driver v. 4.5 seems to work. Another solution is to use AHDI and then
boot HD-Driver from the AUTO-folder.
Remember: Don't use AHDI alone without HD-Driver with harddisks bigger
than 1.0 GB.

Source record: 135961

CH>With my Quantum Fireball 1280MB EIDE I get an awsome speed of about
CH>3MB/s and

The maximum speed of the IDE-interface in the falcon is 2.3MB/s.

CH>from the HD. Western Digital don't use the bootblock the same way as
CH>all others it seems.

There are some IDE-harddisks which want their own parameters (heads,
tracks, etc.) from the PC-bios. Imagine what happens when there is no PC-
bios (as in the falcon)?

Tschuess
Frank

P.S.: HD-Driver/SCSI-Tools give you the opportunity to produce a
Diskbootsektor which fakes the above mentioned procedure.

>Mega Ste.

Just out of curiousity... what kind of drive was it? See, I'm struggling to
get my Sony MPF-520-1 to work in HD mode, so in case you had that one....
My guess is that you're using a Teac 235 though.. am I right? ;-)

By the way, you do know that you're able to get an extra "high density
format" option on the desktop by flipping one of teh DIP switches near the
ROM chips inside the MegaSTE? I *think* it's switch no.7, but don't quote
me on that.

I suppose it's an SCSI drive you have as you're asking for an SCSI
interface. If the drive was an IDE type you could use one of those TOS
2.06/IDE boards. They even let you put a 2.5" IDE drive inside a regular
ST/STFM (but not STE)!

I generally try to do so myself, but occasionally, if one chooses a bad test group, one ends up mailbombing oneself. As each of the (hundreds? thousands?) of machines listening to that test group respond with "I heard it" messages, one goes from a minimal mailbox to a well-overflowed mailbox.

Can anyone name a test newsgroup that only echoes perhaps two or three "it works" messages?

(If one pays by data volume, [like all NZers do], a simple test message to a test newsgroup can become an expensive way to demo using the Usenet)

It works best if one includes the full header of the message (proving it
came from a particular ISP) when reporting it to a creeps admin.

Some time back I received the following addresses that i could report
"Make Money Fast" and "Turn $5 into $50000" crap to.

1) nfic@internetmci.com (national fraud investigations)
2) jccheezum@uspis.gov (US postal inspectors who will prosecute)

If I feel really nasty, and the message includes magic phrases like "I
made $32445 in the first month", then I report them to their local tax
department as well.

For American-based MMF scumbags, I believe that the address is:

Internal Revenue Service
Ogden, Utah
USA

724. Help! Strange Serial Port Probs on Falcon

Newsgroup: comp.sys.atari.st
Date: 1996-10-11 00:00:00 UTC
From: bjr@edison.ebicom.net
Message-ID: <53k9ka$e4p@einstein.ebicom.net>
Source record: 136054

I've a strange problem concerning programs that use the serial
port (modem 1) on my Falcon 030.

After a cold boot...any program that tries to access the modem port
causes 4 bombs.

After a warm boot...everything works fine.

Example:

I enable STik..
When it goes to dial...
"DING" 4 bombs

After a warm boot...it will work fine...anytime I try to run it
after a cold boot I get the 4 bombs. Anytime I've warm booted at least
once all is fine.

Example 2:

I load ConNect...
I open the dialer window...
I double click on a number to dial...
CoNnect trys to dial...
"DING" four bombs!

After a warm boot it works fine...
Anytime it's run after a cold boot...4 bombs.

I've tried it on a clean system with no Auto programs...same
deal...no go after a cold boot...works fine after a warm boot.

I have tried FPATCH2.PRG in the Auto folder...(I normaly have this
installed at all times). I normaly run Geneva, but the problem doesn't
go away on a clean single tos with no ACC or TSR's either.
I've tried installing the Atari modem CPX as well.

Any Ideas???

Thanks,
Brian

I had a similar problem, since my NVRAM had been set to boot in 16 colours
(Xboot looks so much nicer with a blue logo ;)

Get a program like bootconf which allows you to setup the NVRAM, such a
program came with my falcon. Simply set it to 2 colour mode.

Cheers,

Xav

Hi!
I would like to connect my beloved Falcon to a Philips
CM 8833 RGB monitor I have bought for my Jaguar.
I've already tried with both the television output
on the rear of Falcon or with the RGB adapter (plus an
old ST scart cable) but the result is not so good.
So, is there a specific cable to connect the Falcon
to a Philips RGB monitor (may be a video composite
cable)? And where is it available?
Thanks in advance.

Regards,
Rosario Pignatelli - Italy

Yeah- they're not going to mess up our group without paying for it,
right? ;-)
I've started to take it as a challenge now, getting these people- and they
think they're so smart when they fake their addresses.. hah! I don't give
up that easily.
Anyway, I got another mail from "root" (apparently) since I wrote to both
postmaster and root, but I've been told that postmaster is usually good
enough.

Here's what "root" had to say:

I hope you will be pleased to know that this person's account has been
closed. We take spamming VERY seriously at this company and close accounts
on the 1st occurance.

Thank you for not ignoring the spam and mailing us notification of this
persons actions. It's only by people pointing out when people spam, that we
can take any action.

Nick Kean,
Systems Manager,
Efficient Software (ESNet).

So, to all you other ST'ers out there: it helps going after these people
who are up to no good!

If you find a message which shouldn't be in this
group (or any other group where the posting is inappropriately placed for
that matter), then please send a copy of *the whole* message (yes- the
header is VERY important!) to: postmaster@xxxx.xx at that site (replace the
xxxx.xx with the provider/company/domain name).

And be sure to check the header's mail-path in case the person who sent the
message faked his/her address.
Let's get em!!! ;-)

733. FS Atari Software & Hardware

Newsgroup: comp.sys.atari.st
Date: 1996-10-12 00:00:00 UTC
From: bball@snowcrest.net
Message-ID: <53msdj$77k@news.snowcrest.net>
Source record: 135963

I have the following great deals for those in the Atari ST world.
Outburst (V.3.1), printer accelerator
Datalite 2, disk doubler
XBoot III (V.3.10), boot Manager
Warp 9 (V.3.73), speeds screen output by 40%
Style and Image manipulator
Ultimate Virus Killer, best virus protection for Atari
$10.00 each, or $45.00 for all.

Also for sale:
Spectre GCR, the MacIntosh Emulator $25.00 (originally $400.)
VDI-ST, a video "frame grabber", just hook it up your TV, VCR,
or Video Camera. $20.00.
Geneva, the multitasking application. $20.00
Or all for $80.00.

Contact Billy Ball at E-Mail bcard@snowcrest.net,
or call (916-275-4632.

: Your FDI connects to the Falcon DSP port, while the FA-8 connects to
: the FDI. I believe the connectors on the FDI not going to the DSP
: port match the connectors on the FDI. Originally, there was a
: small ribbon cable that came with the FA-8.. evidently you didn't
: get yours?

My FDI and FA-8 were accompanied by two cables, one short ribbon cable (with two rows of pins on both sides) to connect the FDI and FA-8, and another cable that is several feet long, which I assumed was to connect the Soundpool hardware to the Falcon's DSP port. Unfortunately, the connectors on both sides of the longer cable are also two rows of pins (rather than three) although the connector size is virtually the same as the Falcon's DSP port. Also, the 3-row connector on the Falcon has many more pins which are much smaller than the pins on the Soundpool hardware and accompanying cables. I must deduce that this longer cable is the wrong type, or that I am somehow missing an adaptor that connects the DSP to one of these 2-row connectors.

Newsgroup: comp.sys.atari.st
Date: 1996-10-12 00:00:00 UTC
From: ccook@icis.on.ca
Message-ID: <845168990_OASIS_@icis.on.ca>
Source record: 135966

You have to change the NVRAM to make the Falcon boot in 2 colors. Then
you need to make sure that you use a two-colour resolution when you run
X-windows. This only matters for X-windows, so if all you want is
MintNet just change the mint.cnf file. Here's mine for a start:

```
CON=u:\dev\console
cd u:\
setenv UNIXMODE /-ru
setenv TEMP /tmp
setenv TEMPDIR /tmp
setenv PATH .,\bin,\etc,\usr\bin,\usr\local\bin,\usr\etc,\usr\ucb,\usr\bin\X11,\usr\local\
bin\X11,\gnu\bin
setenv HOME \home
setenv SHELL \bin\sh
setenv PCONVERT PATH,SHELL,HOME,CDPATH

# ------------------------------------------------------------------------
# NOTE NOTE NOTE NOTE
# In the following change the f: to the drive of your minix partition
# and uncomment once partition has been created
# ------------------------------------------------------------------------

sln g:\usr\bin u:\bin
sln g:\etc u:\etc
sln g:\usr u:\usr
sln g:\usr\ucb u:\usr\ucb
sln g:\home u:\home
sln g:\tmp u:\tmp
sln g:\var u:\var
sln g:\gnu u:\gnu
sln u:\c\mint\mintnp.tos u:\vmunix
sln u:\proc\MiNT.000 u:\dev\kmem
sln u:\etc\profile u:\profile

exec g:\usr\etc\syslogd

echo Now booting MiNT.
```

Good Luck

Cliff

>> next picture to be converted and viewed just fine.
c>
c> It's hard to believe you don't get this problem; I run into it on at
c> least 250f the pages I visit.

I don't say that I don't get a problem of pictures not showing, just that I'm
not sure I blame the OVL for it.

c> 1. CAB.OVL indicates the image is only partially received.

So we're talking about the normal OVL rather than the JPG OVL? The new OVL
certainly does do things differently and, I agree, not always successfully
first time.

c> 2. The size of the image is irrelevant, could be 2000 bytes or 200,000.

What about the uncompressed size?

c> 3. When you press ESC, CAB will go on to load larger images from the
c> same page, then try to reload the images it missed and then stop at
c> exactly the same character in each as it did on the first attempt.

After failing on the first image does some of the cache in RAM (possibly from
previous pages) seem to get flushed, so that free RAM shoots up higherthan
before the attempted download? Do you use a free ram indicator like Menuinfo
to see it as it happens?

c> 4. It doesn't matter whether this is the first site or the 20th site
c> you've visited, the same character in the same image causes the same
c> problem.

I certainly haven't noticed that...

c> 5. With version 1.41, you can watch the entire image download if you
c> look at the modem lights. CAB.OVL just stops passing the data back to

c> CAB.

Yup, I've seen that. RX flashes but the received bytes indicator doesn't shift...

c> 6. The problem always occurs either at the very beginning (0/x) bytes
c> received or within a couple of thousand bytes of the end.

What free RAM do you maintain in your cache settings? Thanks for making me think about this a bit more. I've now increased my minimum RAM cache seeting from 200Kb to 300Kb to see if it makes a difference.

c> My personal opinion is that CAB.OVL cannot handle some very standard
c> JPEG convention. It thinks it has reached end of file and stops
c> acknowledging new data. Then when it fills in the frames created the
c> first time around, it checks to see if it has the correct file,
c> discovers it missing, and tries again.

Sounds a possibility. I recognise that sequence, but not necessarily just for JPGs. The decompression of JPGs would certainly hit the RAM availability before any other file type though, so I'm still inclined to think along those lines.

c> CAB is a wonderful program; this should not be considered a criticism.
c> Rather it is an attempt to help the programmers understand the problem
c> which makes some sites virtually unusable. Believe me, I know how
c> important feedback is after spending 36 years developing computer
c> systems.

No problem with that.

CAB's up to v1.41a btw...

>port (modem 1) on my Falcon 030.
>After a cold boot...any program that tries to access the modem port
>causes 4 bombs.
>After a warm boot...everything works fine.

I have had a similar problem w/ my Falcon ever since I got it and to date
I have never found a solution. When I first turn on my Falcon from a
cold power up, my modem responds to all outgoing scripts and keystrokes
but nothing incoming from the modem makes to my screen. System just
sits there blank... If I do a reboot OF ANY KIND everything works OK.
It matters not if I do a warm keyboard reset, or a cold keyboard reset
or hit the reset button or hit the power switch. Regardless of how I
do it, rebooting the machine solves the problem. I simply made it a
rote practice to power up, wait for the FUJI, hit reset, and go on w/
my business. It's dumb, I know, but it's the only thing that works.

If anyone knows a better way, I'm ready to hear it!

>So why not use GEM? Why reduce the usability of your software for no reason?
>Why make it inconvenient for "power users" to use your software?

One very good reason for me and many many other programmers NOT to do
as you seem to be insisting on, the reason we do not make our programs
Multitasking,Gem compatable,TT,Mega and Falcon friendly....
Because we don't know how?, or as in my case, I not only do not know
how, but my preferred software language does not support such things,
Yet "we" still have something to offer the ATARI community in the way
of software...I can make you a list as long as my arm of software that
Ignores GEM, and it is software that many many people use, Software
some people could not only , not do without, but actually get pleasure
from using...I am not talking games either,

>I don't like to go on and on about it, but I still see software appearing that
>does not use GEM when it should, and this needs to stop.

This will NEVER happen, actual I agree with your sentiments, it
should happen, Indeed it is the correct way to go about things,
wouldn't it be luverly to make a program and it work on every machine
that includes the word ATARI.....I would like to see this, I just
doubt it will happen :(, all programmers would like to see this,
but....

>This is one area where, for example, the Macintosh has a big advantage over the
>Atari - Mac programmers seem to be sensible enough to stick with the standard

No I do not think it is common sense by the Mac programmers, there's
another Post in here from Tom Lamparty about that :)

>and make their software better because of it. If only programmers on the Atari
>TOS platform were sensible in this regard also.

See!, it is not a matter of us not being Sensible, that's a little
harsh, a lot of people started programming on the ATARI with languages
that did not support GEM or Multi tasking or such things, a couple of
years later when they had mastered <ahem<G>> programming they then
find the limitations, what are they to do, Carry on and produce usable
software?, Give up? or throw away the last few years and start to
learn a whole new programming language?,

>All this is "my humble opinion" of course, but I still believe people should
>listen to it and see the sense in it :-)

Yes this is a matter of opinion (and a friendly debate), but when you make sweeping statements about how "all" programs should do this that and the other?, and accuse sections of the ATARI programming community as not being sensible <smile> than someone has to stand up and say "oi!".....:)

At the moment things seem to be pointing to Stik itself actually.. the
stopping at the end of files seems to occur (although less frequently)
in other stik programs suck as when dccing a file under irc or
downloading a file with mg-ftp.

> c> 1. CAB.OVL indicates the image is only partially received.
>

netscape dont work first time quite a bit of the time as well :)

> c> 2. The size of the image is irrelevant, could be 2000 bytes or 200,000.
>
>What about the uncompressed size?

it seems that there is a certain string of characters which occur more
regularly in jpegs than any other file which make stik hang
somethimes.. people who have the ability to do so try getting one jpeg
file which cab hangs on and try accessing it with cab and then over
ftp (on the same server to be sure) and see if the file hangs in the
same place.

> c> 4. It doesn't matter whether this is the first site or the 20th site
> c> you've visited, the same character in the same image causes the same
> c> problem.
>

It happens sometimes.. sometimes its a random byte count but noway
will the image download in full.

> c> 5. With version 1.41, you can watch the entire image download if you
> c> look at the modem lights. CAB.OVL just stops passing the data back to
> c> CAB.
>
>Yup, I've seen that. RX flashes but the received bytes indicator doesn't

>shift...

Yep it has been noted.. just a bugger to find out what the hells
happening with the missing Data.

>What free RAM do you maintain in your cache settings? Thanks for making me
>think about this a bit more. I've now increased my minimum RAM cache seeting
>from 200Kb to 300Kb to see if it makes a difference.

I dont think it will although it might do I think the problem occurs
before it hits cab.

> c> My personal opinion is that CAB.OVL cannot handle some very standard
> c> JPEG convention. It thinks it has reached end of file and stops
> c> acknowledging new data. Then when it fills in the frames created the

>
>Sounds a possibility. I recognise that sequence, but not necessarily just
>for JPGs. The decompression of JPGs would certainly hit the RAM availability
>before any other file type though, so I'm still inclined to think along those
>lines.

The problem with this is that cab.ovl doesn't decode jpegs in any way
cab_jpeg.ovl does but that doesn't get called until the full image is
downloaded.. Cab.ovl treats jpegs in the same way as any binary file
like I said before I think.

>
>CAB's up to v1.41a btw...

And cab 1.4x beta has has had animated gifs in for the last few days
btw <G>

>
>So why not use GEM? Why reduce the usability of your software for no reason?
>Why make it inconvenient for "power users" to use your software?
>

Some remarks:
(1) Computing GEM (= using only vdi- and aes-functions) is not easy, if you
haven't done it. There are many kinds of faults, you can make! And using *.RSC
needs a lot of learning too.
(2) But we are in a situation, where we have lost our orginal base: in the near
future, we only can leave ATARI or use emulators like MagiC, STonX and so on.
And it's not always possible, to emulate the whole TOS-functions (for example
sounds and so on). So, if you want to distribute a new program seriously, you
must use AES- and VDI-functions, but no functions like line_a and so on.
(3) You often hear, that GEM is slow. But that isn't true. You can be very
fast, if you write good C-programs with good data-organisation and good
algorithms. The only disadvantage is, that you can't write good games, if they
need to write directly in the screen-buffer. (And the difference between elder
hardware like ATARI 520 and newer hardware like MegaSTE will hold on in every
case!)
(4) The standards are surely not as strong as on a MAC. You only should
respect, that the left column of your menu should be named FILE and contains
functions for loading and saving files and the quit. If you are writing an
editor you should use the common short-cuts like ^Y for cutting a line. As user
I'm looking for such features. On the MAC there must be another column called
EDIT containg the items cut, copy and paste. And that in programs, where
nothing can be cut, ccopied or pasted. That's curios!

Therefore: Use GEM, although it's not easy. (if you've learned it, it's nice)

>twice. Anyone know of a freeware conversion prog?

There are a couple of options - 525 will convert aiff to wav and wav
to aiff, shareware. Some of the atari Csound utilities like Mixer
and Scale should also do the conversions. 525 can be found on most
atari archives and the csound stuff can be found at

ftp.maths.bath.ac.uk/pub/dream/

The csound files are ttp.

> ST/STFM (but not STE)!

That sounds pretty neat, but I only run SCSI; I don't "do" IDE. With
SCSI, I can run a drive on ANY machine I own. My 8-bit, the STs, my DOS,
Windows, or Unix machines. Much nicer interface as well.

I do appreciate the info, however. I had never heard of that upgrade.
Atari information is rather hard to get here in the states. People don't
care that it is a great machine, just that something can run Windoze...

754. Upgrading a Mega STe, PAK 68/3 68030, etc.

Newsgroup: comp.sys.atari.st
Date: 1996-10-12 00:00:00 UTC
From: comezana@math.psu.edu
Message-ID: <53oo1r$9hu@dodgson.math.psu.edu>
Source record: 135984

Hi!
I'm considering options for upgrading a Mega STe, and what I have read about the PAK 68/3 68030 looks pretty attractive. I would like to hear some comments on this board before I make a decision in this regard. I have some specific questions, though:

1- What video modes are available? Would overscan work when using an SC1224 as it does in the Falcon, or is a hardware modification necessary?
2- Is it possible to use a VGA or SVGA monitor with this thing? Is it necessary to add a video card for that?
3- Would Screenblaster work with it?
4- (VERY important) Does Linux/X run? As a matter of fact, that's the primary reason why I want to do this: right now I'm running Linux and X on a 14 Mb Falcon, and while it works beautifully, X is kind of slow. I figure that with a 50 MHz buffer-equipped PAK/3 and an extra 8 Mb of RAM, Linux on the STe should run circles around the Falcon. I know that I would have to install an FPU, but that's no big deal.

On a separate note, I want to replace the internal HD with something bigger; right now I have a 40 Mb Seagate ST157N. I'd like to hear if any 3.5 SCSI HD would work, or if there is anything else I should know.

Any information on this will be appreciated. Thanks.

Gustavo

756. serious CAB problems

Newsgroup: comp.sys.atari.st
Date: 1996-10-12 00:00:00 UTC
From: Martin.Byttebier@ping.be
Message-ID: <845229074_OASIS_@ping.be>
Source record: 135986

Hello,

My current setup is as follows:

1) Multitasking
MiNT v1.14, MiNTnet v1.0, cab-for-mintnet-177 overlay, N.AES
v1.1.0 and the Thing v1.01 desktop.
2) SingleTOS: Thing 1.09 (mostly) or Ease desktop.

All this is running with a Crazy Dots II graphic card with NVDI 2.5
ET4000

My problem is that I can't display webpages with Cab v1.31 in color
(sometimes I can, but this is rather occasionally) because the
colordisplay is wrong.
With Cab v1.41 the colordisplay is much better but still not perfect.
I have lots of little pale gray dots all over the pictures.
Cab v1.41a however is a complete disaster. Even under singleTOS and the
Ease desktop it can't display the colors correct. The older versions
of Cab shows the colors perfect under singleTOS (except Cab 1.20b,
where I have these little gray dots too)

All version shows sometime great black rectangulars across the pages.
instead of the normal horizontal rules. Also the pictures have so now
and than the wrong format.

I wonder if it's just me or if there are some other people who have
these problems too.

762. Re: I need to talk on internet!

Newsgroup: comp.sys.atari.st
Date: 1996-10-12 00:00:00 UTC
From: Lonnie McClure <lmcclure@delphi.com>
Message-ID: <5TPxdlz.lmcclure@delphi.com>
Source record: 135992

In a messge dated 10-8-96, Gerry O'Rourke quoted a message in which Peter Ross said (in part):

| Again, the source code is free. Mega STe, TT, and Falcon
| computers can all utilize the Mac B/W QuickCam camera via
| the LAN port. Other Atari's would require the PC
| version connecting via the parallel port.
|
|

To which Gerry O'Rourke replied:

| Don't hold your breath, the PC & ST parallel ports are
| not the same, the ST is inferior. Makes porting this type
| of software far from trivial.
|
|

Very true. Still, his point about using the Mac version of the QuickCam on those Atari's equipped with SCC-based LAN ports is valid, as even the Zilog chip driving the port is the same as on the Macs.

Owners of regular ST's and STe's, as well as Mega STe owners, could likely be served by a video digitizer such as the old VIDI-ST, and a handy camcorder, or even a dedicated inexpensive B&W video camera (Does anyone know offhand how much the Tyco "Kidcam" costs? If it is less than the cost of a B&W CCD security camera, it be an ideal companion to an older monochrome digitizer).

It's true that the PC and Falcon printer port is bi-directional while the
ST is not. But unless the QuikCam would require something that only a
bi-directional port can give, then it still can be possible.

Do remeber that there are other ports such as the cartridge which would
be even better.

I've seen the Kidcam go for about $100 so it's not a bad price. When I
seen it, I thought it would go perfectly with an old ST video digitizer.

I don't know if this appies to all freenets, but the ones I had dealings with are community BBSs with free access, or maybe just a one time registration fee. The one here in Youngstown, Ohio is sponsored by St. Elizabeth's Hospital and Youngstown State University. Most seem to have the same restrictions on ftp, they don't allow it! Though they do have Lynx, e-mail and usenet newsgroups. yfn.ysu.edu gives you 1 meg for both your mailbox and your workspace, but doesn't kick to hard if you temporarily go over the limit, but files may disappear at any time, so make it snappy!
Telnet lets you jump from one internet location and log-in at another just like you had dialed in direct. That means you either have to have an account at the location you telnet to or log-in as visitor! I use it all the time to go from my ISP account to check my YFN freenet account for new mail! Freenets tend to be busy places! Saves me having to re-dial for up to half an hour trying to get in!
You can check out yfn at yfn2.ysu.edu with telnet to see what I mean, only from the UK the lag might be a real bother!

The following message is from Ex-employee Don Thomas of Atari (he's now working for Sony with the PlayStation). It's an interesting message. If you haven't seen it yet, capture it and read it. It's thought provoking. Be warned though - this is a *LONG* post, so capture it!! <line length is 64 chars.> <300 lines so it is in two 150 line posts>
-!-

Did you hear anyone say "Goodbye" ?
==========
by Donald A. Thomas, Jr. (96.10.04)

It's odd to imagine an institution, which was as big and as powerful as Atari once was, to have been shut down in recent days. The real amazement for me is that it was all accomplished without a measurable flinch from within or outside the gaming industry. I can understand that gamers wanted to push Pong out the door early in the timeline. I can appreciate that the classics such as Missile Command and Asteroids do not push 32-bit and 64-bit systems to any technological limits. I know all these things intellectually, but the heart cannot face the truth that the world and the corporate machine known as Atari could not find an amicable way to coexist.

On Tuesday, July 30, 1996, Atari Corporation took each and every share of it's company (ATC), wrapped them all in a tight bundle and presented them to JTS Corporation; a maker and distributor of hard disk drives. On Wednesday, the shares were traded under the symbol of JTS. Within a few weeks, the remaining staff of Atari that were not dismissed or did not resign, moved to JTS' headquarters in San Jose, California. The three people were assigned to different areas of the building and all that really remains of the Atari namesake is a Santa Clara warehouse full of unsold Jaguar and Lynx products.

It was only as long ago as mid 1995 that Atari executives and staff believed things were finally taking a better turn. Wal*Mart had agreed to place Jaguar game systems in 400 of their Superstores across the country. Largely based on this promise of new hope and the opportunities that open when such deals are made, Atari invested heavily in the product and mechanisms

required to serve the Wal*Mart chain. But the philosophical beliefs of the Atari decision makers that great products never need advertising or promotions, put the Wal*Mart deal straight into a tailspin. With money tied up in the product on shelves as well as the costs to distribute them to get there, not much was left to saturate any marketplace with advertising. While parents rushed into stores to get their kids Saturns or PlayStations, the few that picked up the Jaguar were chastised by disappointed children on Christmas day.

In an effort to salvage the pending Wal*Mart situation, desperate attempts to run infomercials across the country were activated. The programs were professionally produced by experts in the infomercial industry and designed to permit Atari to run slightly different offers in different markets. In spite of the relatively low cost of running infomercials, the cost to produce them and support them is very high. The results were disappointing. Of the few thousand people who actually placed orders, many of them returned their purchases after the Holidays. The kids wanted what they saw on TV during the day! They wanted what their friends had! They wanted what the magazines were raving about!

In early 1996, Wal*Mart began returning all remaining inventory of Jaguar products. After reversing an "advertising allowance" Atari was obligated to accept, the net benefit Atari realized was an overflowing warehouse of inventory in semi-crushed boxes and with firmly affixed price and security tags. Unable to find a retailer willing to help distribute the numbers required to stay afloat, Atari virtually discontinued operations and traded any remaining cash to JTS in exchange for a graceful way to exit the industry's back door.

Now that JTS has "absorbed" Atari, it really doesn't know what to do with the bulk of machines Atari hoped to sell. It is difficult to liquidate them. Even at liquidation prices, consumers expect a minimal level of support which JTS has no means to offer. The hundreds of calls they receive from consumers that track them down each week are answered to the best ability of one person. Inquiries with regard to licensing Atari classic favorites for other applications such as handheld games are handled by Mr. John Skruch who was with Atari for over 13 years.

In spite of Nintendo's claim that their newest game system is the first 64-bit game system on the market, Atari Corporation actually introduced the first 64- bit system just before Christmas in 1993. Since Atari couldn't afford to launch the system nationwide, the system was introduced in the New York and San Francisco markets first. Beating the 32-bit systems to the punch (Saturn/PlayStation), Atari enjoyed moderate success with

the Jaguar system and managed to lure shallow promises from third-party companies to support the system. Unfortunately, programmers grossly underestimated the time required to develop 64-bit games. The jump from 8-bit and 16-bit was wider than anticipated. In addition, Atari was already spread thin, monetarily, but were required to finance almost every title that was in development.

After the initial launch, it took Atari almost a year before an assortment of games began to hit store shelves. Even then, having missed the '94 Holiday Season, many of the planned titles were de-accelerated to minimize problems caused by rushing things too fast. Consumers were not happy and retailers were equally dismayed. The few ads that Atari was able to place in magazines were often stating incorrect release dates because that information changed almost every day although magazines deadline their issues up to 120 days in advance.

It was in 1983 that Warner Communications handed Jack Tramiel the reins of Atari. By this time, Atari was often categorized as a household name, but few households wanted to spend much money on new software and the systems were lasting forever. No one needed to buy new ones. That, combined with Warner's obscene spending, amounted to a *daily loss* of over $2 million.

Atari was physically spread all over the Silicon Valley with personnel and equipment in literally 80 separate buildings; not considering international offices and manufacturing facilities Mr. Tramiel took only the home consumer branch of Atari and forced Warner to deal with the arcade division separately.

Within a few years, Jack took the company public, introduced an innovative new line of affordable 16-bit computers and released the 7800 video game system.

To accomplish these miracles for Atari, Jack implemented his "business is war" policies. While people who publicly quoted his statement often felt that policy meant being extremely aggressive in the marketplace, the meaning actually had closer ties to Tramiel's experience as a concentration camp survivor.

Of the 80 buildings in Sunnyvale, Santa Clara and Milpitas, almost every one of them were amputated from Atari's body of liabilities. The people, the work, the heritage, the history were fired or liquidated. Those who survived were unsympathetically required to fill in the gaps and while most tried, few actually found a way to be successfully do what a dozen people before them did.

Atop the mountain, Jack pressed with an iron thumb. All Fed/Ex mailings were required to be pre-approved by one of a handful of people. "Unsigned" purchase orders went unpaid

regardless of the urgencies that inspired their creation.
Employees found themselves spending valuable time trying to
find ways around the system to accomplish their jobs. Many
of them lost their jobs for bending the rules or never finding
a way to make things work. As horrible as it all sounds, it
actually was the only way to protect Atari as a company and
give it a chance to survive as it did and did very well.

Did you hear anyone say "Goodbye" ? <Part 2>
==========

Jack's introduction of the 16-bit computer was initially hearty in the United States but it went extremely well in Europe. Europeans were not accustomed to "affordable" technology and although the Atari computers were not IBM compatible, it didn't matter because people could afford them. Jacks' private laugh was that the computers were sold at prices much higher in Europe than Americans were willing to pay. As a result, most of the machines made were being shipped to European destinations to capture the higher margin. This enraged the people in the United State that had been Atari loyalists. While waiting months for stores to take delivery domestically, international magazines were touting ample supplies. Those in the know within the U.S. became dismayed. The remainder never knew Atari was slowly abandoning the value of Atari's name recognition as it became easier and easier to forget some assuming Atari had long filed for bankruptcy.

On a technical level, Atari 16-bit computers were designed beyond their time. For less than $1,000, consumers could enjoy "multimedia" before the phrase was ever really widely used. The icon-based working environment proceeded Windows popularity although the essential attributes of the two environments were very similar. MIDI was built-in and became an instant hit in the high-end music industry. Tasks were activated and manipulated with a mouse and the system accepted industry standard peripherals such as printers, modems and diskettes.

With all the genius that went into the technology of the machines, very little of equivalent genius went into the promoting and marketing the machines. Mr. Tramiel was the founder of Commodore Business Machines. When he introduced the PET computer in 1977, Jack discovered he didn't have to call a single publication. Instead they all flocked to his door demanding an opportunity to see the product. News magazines, Science Journals, Business newsletters, Newspaper reporters. They were all there with microphone, camera and pen in hand.

And they kept coming back. Adding a switch, announcing a new 4K application or signing a new retaile,r were all big stories the press wanted to handle in those days.

Today, a new video game announcement may generate a request from any of the dozens of gaming magazines for a press release, but a lot of costly work has to be done to assure fair or better coverage. Editorial people are literally swamped with technical news. Samples are mailed regularly to their attention. Faxes fly in through the phone lines and e-mail jams up their hard drives. It takes a lot to grab their attention.

While Atari retained hopes to be successful with the Jaguar, Atari's marketing people were fighting established standards in the industry with severe handicaps. Since cartridges (the Jaguar was/is primarily a cartridge-based system) were so expensive, editorial people were required to return them before new ones would be sent. Editorial people like to assign review projects. So finding cartridges they sent out was not always easy to do. Additionally, reviewers often love their work because they get to keep what they write about. Regardless, the few magazines willing to cover Atari products were more often turned away because of a lack of programmable cartridges or any number of other indecisive barriers. In-store signs and posters were sometimes created, but many retail chains charge premiums to manufacturers that want to display them. Some direct mail campaigns were implemented, but Atari often could not afford to keep those things being advertised on schedule. Therefore, the advertisements were published and distributed, but the product was not available.

Clearly, Jack's experience with the world beating a path to the door of a company making a better mousetrap no longer applied. The world had revolved a few times beneath him and he never noticed. The tactics used to successfully sell Commodore computers were simply antiquated notions from the past. Meanwhile, Sony launches the PlayStation with over $500 million in marketing funds. Today, the PlayStation is considered the most successful next-generation gaming machine throughout the world. Sony bought the market. Tramiel's Atari never learned how to do that. Actually, they never could afford it anyway.

After the 1990's got underway, Europe as well as the rest of the world, discovered that IBM-compatible computers were becoming more powerful and more affordable. The world always did want computers at home just like in the office and companies like Dell and Gateway exemplified the industry's trend toward home-based office computers. As a result, companies like Commodore, Atari and Next couldn't compete any longer. While the dedicated user base of each of them felt abandoned by these

companies having to leave the computer market, the inevitable prevailed. Commodore jumped ship, Next changed business goals completely and Atari invested what they had left in the Jaguar game system. Even today, Apple is kicking and screaming. As good as Apple was at creating a huge niche for themselves, they focused more heavily on education. When kids grow up and get jobs, they want business machines. IBM was always the business standard.

When one examines the history of Atari, an appreciation can grow for how many businesses and people were a part of the game over the years. Chuck E. Cheese Pizza was started by Atari's founder, Mr. Nolan Bushnell. Apple Computer was born in a garage by ex- Atari employees. Activision was founded by Ace Atari programmers. The list goes on and on.

But for some pathetic reason Atari's final days came and went with no tribute, no fanfare and no dignified farewells. Why? Where did all the talent go? Where are all the archives? Where are the vaults? Where are the unpublished games and where are the originals of those that were?

Why has no company stepped forward to adopt the remaining attributes Atari has to offer? Where are the creditors? What has happened to all the properties and sites? Where are the gdatabases, warranty cards, promotional items, notes on meetings, unanswered mail? Who owns P.O. Box 61657? Who goes to work in Atari's old offices? Where do consumers have their systems fixed? Who is publishing new games? Who still sells Atari products? Why are there still a lot of people talking about Atari on-line?

I'm an ex-Atari employee and proud to have been. I'm still an Atari devotee and proud to be. To me, these are questions which all deserve an answer, but who will ask them?

The best people to ask these questions are those who have exposure to the public. If you believe Atari left us without saying goodbye, contact Dateline at dateline@nbc.com. If you REALLY believe, then send this article to 10 of your friends in e-mail. AND if YOU REALLY, REALLY believe, mail a few to newspapers or other news programs. A letter in your own words would be great!

I'd spend money for a thorough retrospect on Atari.
Wouldn't you?

Wouldn't it at least be nice to say "Goodbye"?

--Don Thomas
75300.1267@compuserve.com
209/239-3898

Permission is granted to freely reprint this article in it's
entirety provided the author is duly credited.

-!-

I duly note the author and have not changed his wording or
statements. I did however reduce the line lenghth so that
portions could be "quoted" without going over 72 chars per
line, what with Fido quoting and wordpro processing, it
makes for a mess with full 72 line character lenghth..

I have met Don Thomas. He was the "portfolio" person at
Atari and is a hella of a nice guy! Do what Don suggests;
write, stamp your feet, E-mail, use Snail Mail, voice your
comments, reply here; bug CURRENT NOTES and whomever else
is left, do whatever.
ATARI does deserve a decent GOODBYE!

I have set up a Message Base on the TAF ONLINE BBS, a Binkley/
FoReM/FidoDoor/28.8 BBS (LOCAL _ Base_59) (access must be
requested) so that I can copy any responses to this message
into that area for archival purposes. As Don has mentioned,
"common folks, share that wealth of knowledge",
ATARI deserves a Decent GOODBYE!

The basic set of AI tools is available on ST. There is Smalltalk, LISP and
Prologue - all available PD.

If you want tailored systems then I have heard that MYCIN is around.

I'm afraid I am not very familiar with this stuff now but if you poke around
in a German academic filebase I'm sure you will find more than you want :)

Hi Abel,

In your docs you ask whether you need to duplicate SH as SH.TTP - well, you don't :)

Just add something like:

#F 03 04 000 SH@ @ @
#P 03 04 300 H:\PPP_KIT1.3\MINTNET\BIN\SH@ *.SH@ @

to NEWDESK.INF, and all is fine !

Enjoy,

Ian Smith.

Message-ID: <3260771C.7500@city-guide.com>
Source record: 135866

Hello,

I was once an avid ST user. Upon moving I uncovered approximately 537
3.5 disks from my ST days (and a whole lotta 5.25 from the 8-bit stuff)
I had done many computer eyes pictures on my ST and was wondering if
there is a way to convert them to some type of other format such as JPG,
GIF or anything an IBM can use.

Any and all help would be greatly appericated... I also ran a nitelite 9
line ST BBS and in the process collected many shareware programs from
the time frame of 1988-1990. I could make these files avaliable on one
of my web sites if I get some feedback on it...

Just to let you know that a new version of CoSTa is available from my web site. Version 1.50.

This version now supports Semper, and the new STiK dialler from Peter Rottengatter.

The STiK dialler has NOT been released yet, but when it is then CoSTa supports it!

Cheers, Gary.

783. Want to locate this small program

Newsgroup: comp.sys.atari.st
Date: 1996-10-13 00:00:00 UTC
From: dave@mbha.demon.co.uk
Message-ID: <961013Z171306.183dave@mbha.demon.co.uk>
Source record: 135868

Heeelp!

I am trying to get a copy of a small auto program (or was it an accessory?). I think it was clled 'fujiwatch'. Anyway, what it did was to turn the 'busy bee' cursor into a small macintosh-like wristwatch. I thought I had it oin an archive but I don't.

Anybody remember it?

Anybody got it?

Thanks in advance for any help.

If you are looking for a cheap video camera, Maplin Electronics in the
UK (01702-554000), sell a complete camera on a small circuit board (10x5 cm)
that just requires a 12volt power supply and outputs standard composite
video for 100 UK pounds, the order code is AY16S.

Just make sure your ip address is set 0.0.0.0. First, comment out your
ip addr line; then make sure you include the local address 0.0.0.0
parameter.

I have shown all my ppp parameters below, in case I missed something.

#ip addr [0.0.0.0]

ppp parameters

786. Software for MagiCMac

Newsgroup: comp.sys.atari.st
Date: 1996-10-13 00:00:00 UTC
From: STIRRE31@MAINE.MAINE.EDU
Message-ID: <96287.160043STIRRE31@MAINE.MAINE.EDU>
Source record: 135871

I was curious if there was any internet applications out there that
would work with MagiCMac. What I would like to see although I
doubt I ever will is CAB running on the ethernet on my Mac.
Would this be a matter of changing to .OVL file? I know, I should
just use the applications on the Mac as they are very friendly
and stable.
I was also wondering if there was a CD player that would run under
MagiCMac. There would probably be a problem with the driver.
Thanks for any suggestions.

The drive was an Epson, same brand as the 720k my Mega Ste had. The kit
probably came from Atari. I did set the dip switch to allow high-density
formating from the desktop; the instructions had which dip switch to set.
My external drive had a 720k Teac and replaced it with a Teac 235 high-density.

791. Smail, KGMD & the internet

Newsgroup: comp.sys.atari.st
Date: 1996-10-13 00:00:00 UTC
From: johnnie ligotage <johnnie@ligotage.demon.co.uk>
Message-ID: <bFpGfAA2NWYyIwqN@ligotage.demon.co.uk>
Source record: 135876

Firstly, I liked to sound my appreciation to Kay Roemer , for MiNTNet, without whom I wouldn't be having these problems! %^D

Also to Knarf for his KGMD.

Anyone having problems minit-ing their partition under the KGMD installation, might need to edit the script and add a -e switch to minit. This solved a problem where I was getting less inodes on a 175Mb partition - the last on the drive, than on a 100Mb zip.

Has anyone out there managed to get either smail as in KGMD or a version of sendmail working under MiNT _AND_ hooked up to their IP?

I've managed to get it working between two networked Atari's, but as yet no luck with Demon!

Another thing that I had given up on for a while, was trying to get /dev/lp going. I practically became a printcap guru! %^o
If /etc/printcap exists at boot, the lpd locks. (/dev/lp is installed at this stage) but if I boot without a printcap and then copy one, once logged in, then it doesn't recognise the printer, echoing "Unknown..." when lpr-ing a file.

Any help, etc would be gratefully aprreciated.

BTW, does anyone know if MiNT will run on the Hades beast??!!

>
>Thanks for the help Uwe but it really doesn't seem to work properly.
>If I can't get this resolved I will return it to System Solutions
>and try to get an earlier one that definately does.

Richard,

We have found that changing the cable solves this problem. It is interesting to note that HDDR 3.x and 4.x work fine with the SyQuest supplied SCSI cable, however, from v5 on, it appears that the supplied cable just cannot handle the extra bandwidth that HDDR is capable of providing.

I am not sure if SyQuest supplies the same cable in the UK as they do here, but, it is a cheap cable that we get with the EZ over here in North America.

Before giving up, try a higher quality cable. This has worked for every customer of ours that was experiencing the above noted problem.

All the best,
Chris @ Computer Direct

800. Papyrus 4 in UK

Newsgroup: comp.sys.atari.st
Date: 1996-10-13 00:00:00 UTC
From: hsideras@mettav.demon.co.uk
Message-ID: <20827_hsideras@mettav.demon.co.uk>
Source record: 135885

Hi Michael, on 10 Oct 96 you wrote: ...respect, brethren

mc>
mc> Seeing as no-one else has mentioned it, I thought I'd point out that
mc> HiSoft now have the demo version of the english version of Papyrus 4
mc> (4.25 actually) available for download at their website:
mc>
mc> http://www.hisoft.co.uk/products/atari/

It was announced here on the 24th September at the same time HiSoft confirmed
they'd be at the Birmingham ATari show, but thanks for the reminder. It has
a sample EFMS import module included with it, but if you have TrueImage or
TruePaint already you can use any of the import modules from that with it t

mc> I've tried it out and really like it. However an email to HiSoft
mc> concerning price and ordering info has not produced a response yet.

Either sales@hisoft.co.uk or support@hisoft.co.uk ouht to elicit a response.
It's about 40ukp for the upgrade IIRC, but best to check.

Regards, Harry Sideras - UK Association of Atari User Groups

> provider is changing to negotiated IP on login.

I assume by "negotiated" you mean dynamic; that is, you get a different IP
address every time. That's pretty much the normal method here in the States.
Just enter your address in STARTUP.NOS as [0.0.0.0] and be sure the following
line is in there someplace:

ppp sl0 lcp open active

That might be "ppp pp0" in your case, depending on what you called your link
in the Attach command.

I'm using CAB & STiK on a 14mb Falcon, TOS 4.04 / Magic 5 system. Have tried
various configurations, but unfortunately to no avail...

> Are you sure it's not a RAM problem? I know that if I haven't got enough

Erm.. with a 14mb Falcon, I shouldn't think so ;-)

> when a (any) picture is being converted it doesn't display, and afterward the
> RAM figure shoots back up, leaving enough space for the next picture to be
> converted and viewed just fine.

The problem in question is that CAB received the data for the JPG, and then
just sits there - it doesn't get as far as saying that it's converting the
image, or anything. The only way to continue is to press the esc key..

> That said, I'd be much happier if CAB used the 1st Guide method of showing
> them...

Whatever - as long as it worked!

>Also I will appreciate if somebody tell me where I can take NVDI v. 3.02
>and >.

NVDI is a commercial product. In Germany it is sold by 2B (the programmers) and by Application Systems Heidelberg (ASH). Contact Oliver Buchmann (OBuchmann@aol.com) of ASH for more information.

>I was told that if I would take it I can use Papirus word processing
>with russian letters. Is it true?

Yes, but ...

- you need at least 2 Mbytes of RAM (4 MBytes strongly recommended) and you should have a hard disk

- a screen resolution of 640x400 would be very useful (I don't know if papyrus runs in ST-Medium)

- you need fonts with cyrillic letters. In fact, the TrueType fonts that come with Windows95 do contain cyrillic letters. So if you know someone with Win95 ...

- in the current version of papyrus (4.25) there is no direct support for different keyboard layouts. That means, that you'd have to "type" the cyrillic letters with the mouse by choosing them from the character set window. Another way would be to type latin letters and then use find&replace to replace all the latin letters with cyrillic ones. A GEM macro recorder would be useful for this.

> software I am using is Foresite and I find the software quite awesome...

Hey, good choice Thor! I am one of the US beta sites for Foresite
(FSN:@BOM). ;)

> Are there any other sysops out there who could point me in the direction
> of some doors somewhere on the net..I am looking for mainly strategy type and
> maybe blackjack and chess but any would be appreciated at this stage..

I've been meaning to set up a door resource on my web page for sometime, but
haven't yet got around to it, it is definitely needed. I'm not aware of
any ftp sites
or pages that yet cater for ST doors, but there are quite a few out there,
almost all
are no longer supported however. :(

I have a couple of dozen if you'd like me to send you them in email?

Perhaps others could wade in here with suggestions...?

812. Help! Oasis Newsgroup Prob.!

Newsgroup: comp.sys.atari.st
Date: 1996-10-13 00:00:00 UTC
From: thechyld@pcc-uky.campus.mci.net
Message-ID: <845314578_OASIS_@pcc-uky.campus.mci.net>
Source record: 135897

Well, I've been using Oasis v1.35e since it came out, and while I've went through the same "teething" pains that everyone else has, overall it has been pretty functional...Now its pulled a new one on me! I don't even know if anyone will be able to see this, if so E-mail me 'cause I can't read the newsgroups any longer! It connects to my news server, then tells me the new message header (and the number of new files) but where it normally starts to download the files I get the following:

NNTP Error 503
NNTP Datefile not found

then it goes on and tells that 0 of everything was downloaded, etc,... I've reinstalled it from a reliable archive twice already and reset everything and it still tells me this. Everything else (Telnet/ftp/ E-Mail, etc,...) still works fine...

Any help would be appreciated as otherwise I'm not able to keep up with the always-fascinating Atari newsgroups! <grin> Mucho Thanks!

Have: Connor CFP1080S 1.08 gig fast wide SCSI-2 hard drive, 3.5-inch, 1 inch height 1 year old (will work with the AdSCSI+ on the ST with a cheap ($26) adapter card - I can get it for you if needed).

Need: STe/Mega STe/TT/Falcon or other TOS-based computer. If it uses SIMMs, RAM doesn't matter; otherwise, I need at least 2 megs ST RAM.

Will trade, or sell drive outright for $200 plus shipping; 90 day guarantee.

Also have Maxtor LXT535SY 3.5-inch 535-meg SCSI hard drive, 2 inch height. Was used with my AdSCCI+ so I know it works. Will sell for $70 plus shipping;

Where did you get this information? Depending on the hard disk I have attached, and various configurations of bus and cpu speeds I have tried, my Fujitsu 1.06gb EIDE will transfer well over 3MB/s. I also have a Falcon
field service manual, and while it does mention the 2MB/s transfer limit for the SCSI bus, there is no limit specified for the IDE bus.
This question/statement has been brought up before in this newsgroup with
several users posting transfers much greater than what you have said it is limited to. The IDE bus speed it VERY dependant on which drive you select as well as the bus speed you are currently using.

Hi guys!

I'm in need of the file called FZDS ver 1.75 (Freeze Dried Full Screen Editor)

I always wished the FZDT Text editor was external and from what I read it now is!

It was on a few of the FTP sites but when I tried to d/l it all I got was a bunch of characters all over the screen. Anyone know what causes this? I'm useing Unix Shell and it happens once in awhile when I try to d/l something..

If someone could send it to me or let me know of a more reliable site it would be much appreaciated!

Thanks
Johnny

Well, I reckon you must have a later model than the one plugged into the side of my STe ! Stung into action by your comments [g], and thanks to the wonders of multi-tasking, I've just tried re-running the FMCII.PRG. Winding the years past 1999 gives me 1980 again, if many other FMC's are like mine your solution may not be a solution at all I'm sorry to say. By the way, on consulting my trusty "Whitaker's Almanack", I see that 2000 is an "N" year. The only years in the 20th century which fell into this category, which would produce a correct calendar, were 1916 : 1944 : and 1972. With 2001 (a "C" year) you have better luck, it not being a leap year, and you can use 1900 : 1906 : 1917 : 1923 : 1934 : 1945 : 1951 : 1962 : 1973 : 1979 : and 1990.

Hope this helps!

Cheers,

Roy

: it's possible that the Cardinal can't handshake reliably at higher speeds on
: incoming calls.

Hmm... That could explain the problems. I use an STE, using Transcendence, and it's locked at 19.2K, though I have not yet done the 38.4K upgrade. I plan to do it soon. I've tried one trick, of doing an ATH&VZ, which does a hangup, displays the setups, and resets the modem. The weird thing is, when I had a USRobotics modem, I had to do this same thing, otherwise it would not take incoming calls after I switched from the 486's term program, which locked it to 115.2K. Neither would it hang up after just doing an ATZ after doing an ATH1. Showing an ATI6, which is the equivalent of the AT&V, would show it's *STILL* offhook. Weird. What forced me to take it back was the 60 second 'hang' which drove me nuts, finally pushing me over the edge after experiencing 3 of them in 5 minutes. How about Zooms? Someone tells me they're good.

Main reason why I was using so many modems, was that back in June, my area had a severe thunderstorm that took out a tree in my neighbors' yard. It not only took the tree out, but their computer, and my 486's controller card and the modem, while I was connected to my ISP. I tried a few, but always had problems to some extent. I had a Motorola, but it had problems with connections to my ISP, never going more than 24000. A Maxtech did better, but kept dropping connections with my ISP, though it did real good with the board. Overpriced, though. The USR was next, and finally the Cardinal. There's a Zoom 33.6 being sold locally for $150. I need to call around before I actually get it.

A friend of mine had the unfortunate occurrence to have his modem hit as well, while it was connected to his ST. Seems it took out several chips in the ST besides just the modem. What chips, I'm not sure.

Hello there....

I would like to start an Atari User Group in the Merseyside area, since we don't seem to have one at the moment.....

What I'm really looking for is a group of enough people so that we can get together and throw a few ideas around and see where we go from there....

If you're interested please contact me on one of these addresses:

TurboNet 100:1011/19.15
NeST 90:102/146.15
AtariNet 51:502/103.15
FidoNet 2:2500/706.15
email Mdyas@Allatsea.demon.co.uk

Thanks
Mark

Because HDDRIVER 6 tests for the processor type in order to be able to activate the processor cache if the "Activate CPU Cache" option is active.

> Does anyone else (Uwe) have any thoughts on this?

I don't think I can say anything more on this subject. Some versions of HDDRIVER seem to run, others don't and sometimes the same version works with some Afterburner machines but not with others. So there must be something weird with the AB causing such strange effects.

Hello,

I recently obtained a SCSI tape drive, and would love to connect
it to my Mega STe. I have an external HD drive with ICD host adapter.
Is it possible to use that adapter to drive the tape unit? Or my
internal adapter? I have seen some tape related stuff on the Net...

Thanx in advance,

Florentijn

From: Coolens Hugo <coolens@kiho.be>
Message-ID: <53t6sb$r43@vivaldi.belnet.be>
Source record: 135769

I'm having exactly the same problems using Postman which is a commercial shell around ghostscript. However the problem only occurs when I'm running it under Magic. When I run it under TOS2.06 only everything works fine.
When in Magic I discovered that ghostscript looks for gs_init.ps in the main postman directory in stead of the directory indicated by the paths. So I CAN make it run under Magic if I copy all the Ghostscript related files directly under the main directory which of course is not a real satisfying solution but it works.

regards,
Hugo

>Startrek:TS(arcade port),

The 520stfm has an inbuilt Floppy drive (Double or single sided,
depending on how new it is) and a tv modulator. (Hence the F and the M!)

The STF:- Floppy drive, no modulator
The ST External floppy, external modulator, external
powersupply(?)

Cool.

:-)
So does it include the whole lot? I mean, MiNT, MiNT-Net, PPPD and
Cab-for-Mintnet?

I guess I have to try it as MiNT + AES 4.1 on an Afterbruner040 is almost
exactly as fast as MagiC 5 (even faster in some places). :-)

So, what is your view on Apex?

I assume from your post that you are against this progam? Have you seen the speed of it? This is not possible in a gem environment. The speed of the window redraws in Apex alpha (apex 3) running in true-colour mode were much better than a Falcon in 16/256 colour mode. They were so smooth that they scared Craig Graham into spending more time optimising XaAES (which is already faster than AES 4.0) window routines...

Yes, GEM does make the environment more consistant, and multi-tasking easier.

No, GEM is not right for all programs.

Anthony

Actually, it doesn't have to be ST-High, just any mono mode. You can
also use expanded mono modes (I used to use FalconScreen to get
above 800*600 mono with MiNT-X).

Craig.

>I wonder how mr Little does it?

Gotta confess, Doug has made a seriously good job of Apex 3 - it's
window system is blindingly fast. The real-time window drags in TC
mode at the same time as a keeping a live video window in the
background are a lesson to us all...

>> scared Craig Graham into spending more time optimising XaAES (which is
>> already faster than AES 4.0) window routines...

I never said I was scared ;)
I just don't want people to laugh at me when I eventually get it
reasonably finished...

>Well, I wouldn't mind if XaAES got as fast as Apex 3 in truecolour.

You and me both - very little chance without a re-write into ASM and
ditching support for all the video modes (XaAES b6 should run in any
rez, on any machine - even with funky graphics cards).

>Wouldn't it be possible to do a VDI based on something like Doug has done
>for Apex 3? Could be cool. :-))

TC mode is great for efficient gfx routines as there's no bitplanes to
mess about with. I really think Atari messed up when they made 256
mode bitplaned instead of the more obvious byte per pixel (which
would have made the 256 colour performance loads better). But I cann't
just support f030 TC mode to the exclusion of everything else - enough
people sulk over my habit of neglecting the lower ST modes....(which
actually work ok now).

Craig.

I see. Yes, I've understood that the MSTE machines use the Epson drive.
I had a look at one some time ago but found out that the faceplate and
eject button from the old drive wouldn't fit (and I'm not really into
messing up the casing of my computer to make it fit).

The Sony lets you use the same faceplate as before, and a little
modification to the drive has to be done to accomodate for the Atari eject
button. That's one of the reasons I chose the Sony, plus it's of high
quality.
But if I don't get it to work with my STe in HD mode there's really no
use..

Tell me- does the Atari faceplate/eject button fit the Teac 235?

From: claes.holmerup@p5.dada.ct.se
Message-ID: <ftn_2.200.136.5$fidonet.org_befa4432_Claes.Holmerup@p5.dada.ct.se>
Source record: 135787

Frank Szymanski wrote this to Claes Holmerup about EIDE hard disks on a Falcon
- HOW????:
CH>> With my Quantum Fireball 1280MB EIDE I get an awsome speed of
CH>> about 3MB/s and
FS>
FS> The maximum speed of the IDE-interface in the falcon is
FS> 2.3MB/s.

The only limit (when it comes to HD's) I've seen in the schematics is on the
SCSI-port, which has a limit of 2MB/s. For all I know, the IDE follows the CPU
and bus speeds, so the faster the machine is - the faster the IDE communication
gets.
When I've compaired with the standard 16MHz setting, there's been an obvious
difference in HD performance when making various tests.

Best regards,

Claes

Source record: 135791

Just to clarify for those trying to help with the JPEG bug ...

Cab loads cab.ovl if stik is enabled. When cab.ovl is loaded Cab is online (even if it physically isn't).

Everything revolves around the cache. Cab expects everything it wants to be in the cache. The only difference between Cab being offline and online is that Cab runs the code in cab.ovl when online. cab.ovl is responsible for putting all the required files into the cache. Cab then loads them as it would offline. jpeg.ovl is only called by Cab once it has loaded the jpeg from the cache. As the jpeg never gets fully written into the cache, neither Cab nor jpeg.ovl are considerations here.

If someone can produce a small series of bytes which consistently fails across the board with results it would be useful. Useful would be defined as something like this:

"The following (small) x amount of bytes locks at position y in all the following situations. I've given it to z amount of people and they all get the same results as me ...

Cab fails at y. Renamed it to something else and uploaded that to my site. Still fails at y. Cant dcc it to anybody. Can't recieve it either. Can't FTP ... [blah]"

I've had incessant problems with my telephone line - it works when the engineer gets here to fix it! Unfortunately, this bug is very much in the same catagory!

>I it possible to run internetsoftware (ftp, telnet, www-browser...) under
>Magic4 or Magic5?

Yes!

>Which programs will do this job?

If you can get a SLIP connection, the latest STiK (TCP/IP
stack/dialler) works fine, as do most of its associated programs: CAB
(WWW), Antmail (POP3 mail), Finger, and IRC. I've had no luck with
MG-FTP or Telnet under MagiC as yet. There is no STiK newsreader yet
(one is in development). You can't use STiK programs with CSLIP or PPP
under MagiC (yet). STiK programs are available from:

http://www.flinny.demon.co.uk/

If you want news and SMTP mail, try Oasis with NOS. This works with
both SLIP, CSLIP and PPP. You can get this from:

ftp.demon.co.uk/pub/atari

If you switch the version of NOS which comes with Oasis for the POP3
version (same ftp site, and it still does SMTP mail if you need it)
you can use kill and get files. NOS will do mail, news, telnet, FTP
and finger. Oasis 1.33 seems better under MagiC as later versions seem
to have problems with the address book. I haven't got anywhere with
Oasis2.

There are some tricks you need to know in order to get Oasis/NOS to
work OK under MagiC. Guy Harrison (http://www.swampdog.demon.co.uk/)
is the expert here: his advice has got me up and running under MagiC5
(thanks, Guy). Mail me if you'd like me to pass on his advice.

HTH,
John

From: schwarz@isa.de
Message-ID: <53t9il$c7@exnewton.isa.de>
Source record: 135793

I would LOVE to have a freeware MPEG-Audio-Level-3 encoder/decoder for
any system, but it would be FANTASTIC to have it use the Falcon DSP.

There is an MPEG-Audio-Level-2 encoder/decoder at

http://www.isa.de/~schwarz/mpegaudio.lzh

This is a slightly improved version (handles Cubase AIFF and input
from stdin) of the mpegaudio package hanging around on the net. It's
source code only, runs probably on all C-compilers, but is incredibly
slow on a Falcon. (Even on the SparcServer20 I usually use, it takes
longer than realtime to compress.)

Would some DSP hacker care to write a fast encoder?

Cracking commercial software is illegal, ok. But think again about it:
what happens when the software is no more shipped ? Do you want all
those precious piece of code to be lost ? It is now your DUTY to
keep the Atari ST alive by spreading software, will it it be illegal
or not. What are you going to do with the Atari software you own ?

1/ You legally keep it and you will later trash it with your ST in
some years. You never gave it to anybody and it you help it to vanish.

2/ You spread it and allow people to keep using it for fun.

Don't except software companies to release 'the great atari st
software cd-rom'. They will never do this. This software will never be
back on shelves.

Exactly!

HDDR v5 and v6 seem to require a higher grade cable. It has to do with the optimization of HDDR that has occured. The cheaper cables do not work with the latest versions of HDDR.

All the best,
Chris @ Computer Direct

>solve this problem. Anyone got a clue where to find this patch?

Ask Achim_Settelmeier@KA.maus.de

I'm sure he will send his patch as uue quickly.

OverScan will make a patch.prg for SBIII

Ask Patrick_Jerchel@B.maus.de for V 1.2 of SB_AUTO.PRG!

My own trick you can found in doitf3h.zip v 4.6 (article 4.9)
It's hard. It works, and the hole description are german.. :/

PickUp all .SBR-Files and store this in:

C:/SB_RES/

Chanche you .SBR-Path in SB_MONI.PRG to C:/SB_RES/

Resort your Autofolder:

C:/AUTO/
MAGXBOOT (32)
FXDIRVE (so you have this board..)
NVDI
METADOS (if you have a cd-rom)
SB_AUTO
and the hole rest..

Look at my MAGIC.INF:

>Does that kind of software exist for Atari-St?
Yes - it runs under Mint. Its included in KGMD (see elsewhere in
comp.sys.atari.st for details of where to find both german and english
transalations)

If you don't want to get the whole installation, you'll need (at least,
I think - feel free to correcct me, anyone) the latest version of
FreeMiNT, minixfs, inetd, MiNTNet (go for 1.01), rpc services (including
mountd) and nfs 0.50, most of which are available at ftp.cnam.fr and if
not, try Kay Roemer's home page.

Saying _ALL_ that, it's probably best to get the BASIC, MANUAL and NET
sections of KGMD, along with MiNTNet 1.01, which should be installed
over the top of everything else. Then put minixfs.xdd,socketdev.xdd,
nfs.xdd and slip.xif in your MINT or MULTITOS folder with toswin.acc in
the root partition of your boot drive and reboot! then read the man
pages on xtab, etc. You'll also need to set up a SLIP/PPP connection
using 'slattach'

I've had it running fine on two atari's networked via MIDI or RS232
using SLIP/PPP.

I vaguely remember seeing a program that allowed you to install
directories as actual drives on the GEM desktop, which would make it
really neat, but I reckon that you'd probably need 4Mb of RAM to be able
to do anything useful. (If anyone else can remeber where this is, please
post it).

I wonder if anyone is having the same problem as me with the upgrade !
I can't get Mint-Net 1.01 to connect with this version . When I use
Mint 1.12 it has no problems whatsoever reading my config file and
connecting to my provider but not with this version . The program
itself works but it just doesn't seem to find the path to my files
telling it where to call and so on . Anybody have any solutions for
this problem . Thanks in advance for any help you can provide me .

I have just uploaded this new program at ftp.cnam.fr ! This program is
really neat to watch in action and well worth the shareware cost .
1) Windows that come flying onto the desktop
2) 3D text and look
3) Clock and date directly on your desktop
This really changes the look and feel of Magx . I put in the incoming
folder as Stewart.lzh .

Hi there,
You can also use a PC bus-mouse if you make some modifications inside it - and
then you'll connect it to the regular mouse-port of the Atari (that means
you'll still be able to use the modem).

Best regards,

Claes

i have been tested 3 emulators on my p.c. tos2win,gemulator 96,and magic
pc
(demo version)
the ratio of compatibility is under at 10%
every atari software then i've been tested not works at 90%
well ! this is my questions :
1) if i had the rom card with G.E.M. in my p.c. they are much
compatibility with these 3 emulators ???

2)they are anybody here can i have 1 of these 3 emulators whith G.E.M.
card
and what are the compatibility ??

3) what of these 3 emulators is better

4) thank's to all for your answer because i want to buy this solution but
the report of compatibility in demo version does not seduct me !

TO BE CONTINUED....

5) AND NOW I KNOW WHY GEMULATOR DOES NOT SUPPORT A LOT OF
ST FLOPPY BECAUSE IF YOU HAVE DISK FORMATED AT 10 SECTORS PER TRACK
GEMULATOR CAN NOT READ THIS FORMAT THIS IS A REAL PROBLEM BECAUSE ALL THE
ST GAMES ARE IN THIS FORMAT FOR EX:DUNGEON MASTER !
IF THERE ARE ANYBODY HERE CAN KNOW AN EMULATOR CAN SUPPORT THIS FORMAT
PLEASE HELP ME AND SEND ME A MAIL !!!

BYE ALL ! FROM DDRCREW !
(excuse for my little english i'm french!)

I know of people who have installed larger SCSI drives in their MegaSTes with little-to-no problems. The only problems I know about are if you get a drive with parity - this will have to be switched off via software on a PC, but if you explain to the dealer what you need to do I'm sure he could accomodate your needs.

The only drives I know of that absolutely refuse to cooperate, at least as boot disks, are Western Digital drives (note that some IBM-branded drives are made by Western Digital) - I've got one in my homemade SCSI drive tower setup, and there is no way that I can install an autoboot file to it without getting two bombs. As a secondary drive, however, it's acquitted itself quite nicely.

Howard Carson at CURRENT NOTES has noted that the nicest SCSI drives he knows of for quality and ease of use on an Atari setup are the Quantum Fireball units. I've used a 40 meg Conner drive as my boot drive for years with no problems (the same cannot be said for my Falcon's 65 meg Conner IDE drive, which packed it in last August, thankfully after I had made a complete backup), and I'm currently using an old 105mB Seagate as my boot drive at the moment until I can find a better one (seems to be a bit flaky on the "F" partition). That and getting ahold of a removable drive (I'm currently leaning towards a Syquest EZ135).

Oh yes, I'd also suggest getting ahold of HD Driver as well to boot with - wonderful software!

Message-ID: <8CA4000.0363005CE2.uuout@dinuba.com>
Source record: 135813

I have a Falcon030 and I'm using MagiC4 version 4.02 as the
OS. If I use SAM (System Audio Manager by Atari) I get very strange
effects while playing sounds. Sounds either work fine or they create
a clicking and poping sound. I am guessing this is a problem with
SAM, but I'm not sure. Does anyone else have this problem or is it
just me. Is there a system sound/event manager that will work with
MagiC? I would like to have some WAV sound files be played at boot
up, during work, and shutdown, if you know what I mean...

Just about any Seagate will work. I have two 1.08 gig Seagate SCSI drives
that I have used successfully with the internal Atari host adapter on the
MSTe. Haven't tried it with the current 4 gig drive, though.

Hmmm, do I understand that you're using it on a switchbox? If so, try
toggling power off and on after the switch - and you may have to reboot the ST
as well.

>doing an ATZ after doing an ATH1. Showing an ATI6, which is the

If the HA is capable of handling the drive (and if it's an AdSCSI+ it should
be OK), you will probably be able to use it. I have an Archive Viper drive
and am using the Berkeley utilities; you probably need a specific tape drivers
in your AUTO folder. Email me for more info.

>switchable module but, what do I gain by doing so?
>

One major difference I found in using Tos 2.06 vs Tos 1.4 (disk loaded beta) is
that it is more stable. I had some applications which crash & hang the ST while
in Tos 1.2/1.4 will go back to the desktop in Tos 2.06. OK you may say it's no
biggie but since I am a programmer, I think it is a great improvement on
stability.

The other thing is faster harddisk access, Xcontrol (your extensions are not
loaded thus you suppose to have more memory), keyboard shortcuts (this is
fantastic no need to use mouse to untop windows etc), different icons for each
file type (not much for me as I view in text), 8 windows (I use WinX so I get
more windows & other winX goodies), move files/rename folders. The desktop
looks better as I put icons on it, with those different icons.

Faster? I am not sure as I use NVDI.

More RAM... an big ramdisk and not problem runnning programs which need 1 meg
of RAM.

I don't use much of CAB except to test my web pages.
IMHO, I agree with Rich T that CAB should not have it's own Email/News reader.

Let CAB be more focused and brings in all the HTML extensions &
multimedia goodies. The next thing after that animation should be multimedia
plugins.

N> The problem with this is that cab.ovl doesn't decode jpegs in any way
N> cab_jpeg.ovl does but that doesn't get called until the full image is
N> downloaded.. Cab.ovl treats jpegs in the same way as any binary file
N> like I said before I think.

OIC. I didn't think of it like that. Still, I'm a bit obsessed with my RAM
limitations atm - I know I run short all the time. Actually, I'm surprised I
can get so much done withot problems on my wierdo setup. I can have an
entire hour long session with no real problems at all (except the ones that
are of my own making...)

>> CAB's up to v1.41a btw...
N> And cab 1.4x beta has has had animated gifs in for the last few days

This message from hallvart@sn.no to All came in on a wing and a prayer...

Hi Hallvard!

h> I'm having problems with the GS environment variables again (I somehow
h> got it to work before, but I've re-organized my harddisk now, so I have
h> to set the paths again).
h>
h> What happens is that when I try to run GS.GTP I get a message saying
h> "Can't find 'gs_init.ps'. I can't figure out why, because I've set the
h> paths up to the "ps" directory where that file is located.
IIRC Ghostscript is hardwired to run from a drive partition other than D:,
I'd kept the messages on this thread from a few months ago and one of them
states that you had this prog working from drive F: without env settings.

I'd suggest looking through the binary for the string :\GS and see which
drive letter it's looking for for a starter.

Speak to 'ya later!

Actually, Atari's XCONTROL.ACC works fine in my stock 1040STE (upgraded to 4 mB when purchased in 92) with TOS 1.62. With TERADESK (free desktop replacement from Wout Klaren, NL) it is just about as functional as a TOS 2.06 unit

hmmm.... what's the point in having a program that is capable of handling
all those above?

i would say that it would be much better to have separate applications for
each task. that way it would be easier to avoid getting one huge ns-like
application that requires _lots_ of memory...

of course i want to see the applications interacting with each other, by
pipes or even AV messages. for example: clicking on 'mailto:' field would
result as opening of an e-mail client program, with default address
pointing to whereever it was suggested to, by html-document...

I assume by "negotiated" you mean dynamic; that is, you get a different IP
address every time. That's pretty much the normal method here in the States.
Just enter your address in STARTUP.NOS as [0.0.0.0] and be sure the following
line is in there someplace:

ppp sl0 lcp open active

That might be "ppp pp0" in your case, depending on what you called your link
in the Attach command.

Have: Connor CFP1080S 1.08 gig fast wide SCSI-2 hard drive, 3.5-inch, 1 inch height 1 year old (will work with the AdSCSI+ on the ST with a cheap ($26) adapter card - I can get it for you if needed).

Need: STe/Mega STe/TT/Falcon or other TOS-based computer. If it uses SIMMs, RAM doesn't matter; otherwise, I need at least 2 megs ST RAM.

Will trade, or sell drive outright for $200 plus shipping; 90 day guarantee.

Also have Maxtor LXT535SY 3.5-inch 535-meg SCSI hard drive, 2 inch height. Was used with my AdSCCI+ so I know it works. Will sell for $70 plus shipping;

PAP? This is a new one on me, unfortunately. I have no idea what you
can do, short of changing provider :-(

>Do you know where to find sources of NOSpop3 ? Maybe I can change the pap hi

No, the version on the demon ftp server has almost no information with
it (not even instructions on how to set up the POP3 stuff, let alone
where the sources are). You can get the program at other sites I
believe, so you may find some pointers there.

> j> There are some tricks you need to know in order to get Oasis/NOS to

902. Latest Releases for the ST..

Newsgroup: comp.sys.atari.st
Date: 1996-10-15 00:00:00 UTC
From: mike.harvey@worldnet.att.net
Message-ID: <53un6t$qlj@mtinsc01-mgt.ops.worldnet.att.net>
Source record: 135826

Has anyone ever thought of making and posting very so often a list of the latest releases of all commercial and even some popular Atari ST shareware titles.. I know often, I have to stop and think when using a prg, I wonder if they have a newer version with more features..

Would others like to help me built a list of software version of things you have, if you know for sure if it was the last release, etc and if you know of any upgrades and what features they added or bugs they fixed..

Does this sound like a worth wild project to you all out there in ST Land??

post here or e-mail me at mike.harvey@worldnet.att.net

Thanks Mike

This is about whether HDD v6 can spot the EZ135 even exists.
On initial installation it does. When rebooting the machine it
doesn't. Booting the HDDriver.prg from the Auto folder after AHDI
and the Afterburner patches works fine.
The system gives no problems once the drive is recognised.

Rich.

Subject: A broken Falcon - any help appreciated
Newsgroups: comp.sys.atari.st
Summary:
Keywords:

Hello everyone!

Just like it says - my Falcon has croaked. After a year and a half
of happy living with a ST 1040, it seems like those 2.5 months with a Falcon
were cursed, or even worse ...

Here are the symptoms; the picture is completely out of sync and
totally white (it runs like hell from top to bottom of the screen). Every 1.2
seconds, I can see what appears to be Falcon's NORMAL boot pic, but it
lasts for a short piece of a second, and, as it is out of sync, jumps across
the screen randomly.

Booting with an AUTO folder gives a different score: the picture
becomes dark (and MAYBE it IS the intro pic of a game put into AUTO) but the
MUSIC DOESN'T start.

When booting "normally", the keyboard nasty clicking sound IS present,
just like everything is normal.

First, I noticed that chip 74HC244 at the left of the motherboard
was extremely hot, and ALL other chips normally tempered. I replaced it with
a new one, but HCT type, which was the only available at the moment.

After that, the symptoms are exactly the same. The new chip is totally
cold, but another one is now very hot - the small one next to the RF mod.
From the manual I found out that it is a video DAC. But I can not buy such
chip in the country.

Besides, a big chip on the left (close to a pair of 74HC244
chips) is much warmer than the others, which are all normally tempered.

Please, help if you can! Any technical support would be welcome.

OR, let me know some adresses of the service depots near Croatia

(Slovenia, Austria, Italy ...).

If you are able to buy and send parts - everything is considered ...

I can find someone to replace them with professional equipment.

Thank you very much for anything/everything !!!!!

Tomislav

P.S. At this point, I have to say that this sad accident really caused a deepest possible disapointment in Atari's product(s) in my little head. Of course, there is always Atarian community, but ... how good can it get ... Anyway, thank you for even reading this, and please, reply to my personal e_mail, because I have to come to the computing Centre to access the Net now, and I can't do it every day.

P.S. Good luck to You ...

Just pulled apart a 1040 STfm. Inside, sitting on top of the CPU was a
chip that only had the letters SACK on it. What is it? It has a V30 chip
on it as well as a few other things.
No more clues for now.
Answers needed.....please.

This is "PC-Speed". It enables you to run DOS (wrrggg!!!).
Of course, you have got the software for this, haven't you?

Following up from my previous posting of atari software and hardware for
sale, here is an updated list of remaining items. Offers invited..

SOFTWARE
Calamus SL with mask module, blend module, starscreening kit, epson
stylus colour kit
(drivers, colour correction curves etc), lots of other modules, HUGE font
library, clipart utility
packs including professional vector images, caluser utilities 1 & 2 vols

PLUS: Outline Art version 3 (24-bit colour vector art package)

All this, boxed and registered with enormous 500+ page manual, now only
UKP120!

Calligrapher Gold (all plug-ins included): UKP35
PixArt 2: UKP20
Twilight screensavers: UKP15
Trueimage: UKP15
Studio Photo 24: UKP30
Script (macwrite clone): UKP35
Diamond Back 3: UKP25
Neodesk 3: UKP15

PHASE-4 3D key animation studio package includes:
* Chronos 3D keyframe animator (with dongle and TT/Falcon versions):UKP80
* Phoenix 2 object renderer: UKP50
* ANM-link (interfaces chronos and phoenix): UKP20
* Cyber 3D edit/creation stuff (cybersculpt, cyberpaint, cybercolor
etc):UKP20

Entire package sell for UKP130

HARDWARE
Videomaster AUDIO-VIDEO grabber: UKP50
Graffiti genlock for Atari STE: UKP80
HAMA digital trilock genlock (for Any computer, NTSC/PAL): UKP250

If interested then please contact:

Dr Simon Williams on :

>
> Would some DSP hacker care to write a fast encoder?

There is a realtime Mpeg-Layer-2 decoder made by Fredrik Noring written in DSP. I'm working on a GEM shell to control the player a little. It works as an ACC and plays songs in the background, taking about 0.5% CPU time.

No encoder is made, but maybe, just maybe there will be.

Also Layer-3 is most likely a possibility, but right now it only works for Layer-2.

There is a prepre beta version on
ftp://kaneda.hemmet.s-hem.chalmers.se/pub/nocrew/tos/mp2audio.tar.gz

This version is not very stable though and a new pre beta version is about to be replacing that one very soon.
Also, this version only support external clocks. The soon to be newer version will check if there is an external clock, or use the internal.

Read more about it on Norings page: http://www.lysator.liu.se/~noring

Take a look at rec.games.infocom. You can get the Lost Treasures of
Infocom I/II and some compilation CD's. Get DOS versions, then you can port
across from the disks. You can play the games with some software called a
Z-Machine. I think the big Interactive-Fiction site is at ftp.gmd.de.

Have Fun,
"Augeas"

OK, Peter, you had your chance. Now, here's the bottom line: Within the past
week, you posted a comemrcial advertisement here, in direct violation of the
charter of University of Northern Iowa. You placed your university's status
as a non-profit educational institution in dnager. You have alos refused to
stop posting personal attacks, even though I offered the olive branch and
suggested that a sharing of knowledge would be more productive than the
constant flames that your activities have generated in the past.

Now here's what's going to happen: EVERY user who is tired of your crap is
going to send email to postmaster@uni.com, quoting the entire following
section, and explaining that commercial advertising is a violation of the
university's charter and endangers their tax-free status. If your sysadmin
still refuses to curb your activities, then the /real/ university
adminstration can take it up with the IRS.

The following is the message that will end the career of Peter Sinclair-Day,
Macintosh salesman:

Introducing the MPOWER line of Mac OS compatible personal
When we asked our customers what they wanted in an Apple Macintosh compatible clone computer, we weren't surprised to hear that most of them wanted two things: great performance at a great price, and the ability to order the system they want, with the drives, and other options they need, but without a bunch of "features" they neither need nor want. The APS MPower series of personal computers is designed to accommodate both of these requests. Priced hundreds of dollars less than systems with similar performance and features, APS MPower systems deliver the exceptional performance of Motorola's 603e and 604e PowerPC processors. APS MPower systems offer a staggering array of storage and peripheral options - and why not. APS Technologies is the premier supplier of storage and backup products to the Macintosh market. Our "Build Your Own Box" option lets you configure your own system with an astounding amount of flexibility.

The Best Engineering - Motorola

When we asked our customers what they wanted in an Apple Macintosh
* Motorola - manufacturer of the PowerPC processor &endash; no one knows it better
* MPower takes advantage of Motorola's quality processor technology, innovation & reliability

The Best Service and Support

* MPower comes from the company you've known and trusted for years
* MPower has the backing of APS' award-winning service and support

Exceptional Value

* Best mix of advanced processor technology and high-quality
Whenhardwared our customers what they wanted in an Apple Macintosh
* Compared with other personal computers running Mac OS, APS' MPower gives you the most for your money

Most Configuration Options

* APS, the recognized leader in Mac data storage solutions, has the hardware that you want included with your next Mac OS system - hard drives, removable media devices, and tape backup systems

APS MPOWER 603E160 $1399
Wh* The best value in PowerPC computing!nted in an Apple Macintosh
* 160MHz Motorola PowerPC 603e processor
* 16MB of RAM
* Three available PCI slots and two available 3.5" drive bays
* 1.2GB hard drive
5
* 8X CD-ROM

* Monitor sold seperately

The new benchmark in PowerPC, Mac OS computing, the APS MPower 603e160, for under $1,400, is the value leader in RISC-based workstations. The perfect home, or mass application PowerPC computer includes a 1.2GB hard disk drive, an 8X CD-ROM, and 16MB (upgradable to 160MB) of RAM. The APS MPower 603e160 includes a mouse, ADBtosh keyboard, three PCI expansion slots, and two available 3.5" drive bays. One-year limited warranty.

APS MPOWER 603E200 $1599
* The ideal mix of performance and value
* 200MHz Motorola PowerPC 603e processor
* 16MB of RAM
* Three available PCI slots and two available 3.5" drive bays
* 1.2GB hard drive
* 8X CD-ROM

* Monitor sold seperately

7
Outstanding performance at a terrific price, the APS MPower 603e200 is the bang-for-the-buck system of choice for individual and institutional users alike. Powered by Motorola's 200MHz PowerPC 603e processor, the APS MPower 603e200 comes ready for action with a 1.2GB hard drive and an 8X CD-ROM. Run most applications in the installed 16MB of system RAM (upgradable to 160MB) and enjoy the exceptional performance afforded by the 256KB of Level 2 cache and 1MB of VRAM. Three PCI slots and two available 3.5" drive bays let you add a whole range of PCI card and peripheral options. With the included mouse and extended ADB keyboard, this is the value-priced performance system of choice. One-year limited warranty.

APS MPOWER 604E200 $2599
* High-performance mini-tower PowerPC system at an exceptional price
* Blazing fast 200MHz PowerPC 604e processor
* Five PCI slots and four available drive bays

* 2.5GB hard drive
* 8X CD-ROM
* 24MB of RAM

* Monitor sold seperately

Blinding speed and exceptional value set this high-performance
PowerPC, Mac OS workstation firmly at the top of the heap. The APS
MPower 604e200 comes equipped with a gigantic 2.5GB hard disk drive,
an 8X CD-ROM drive, and 24MB of RAM (upgradable to 160MB of EDO DIMM
RAM) - and that's just for starters! Turbocharged with 2MB of VRAM and
512K of Level 2 cache, the APS MPower 604e200 includes five PCI slots
for video, networking, peripheral expansion, and other PCI-based
cards. The roomy mini-tower design includes four available drive bays
for optimal customization of the high-performance MPower 604e200.
One-year limited warranty.

CoSTa keeps a log of all calls made from your Atari, costs them, and keeps a
running total. It's a complete call costing management system that supports
Atari NOS, Oasis2/ICE, STiK, Semper, MiNtnet, CoNnect, and CixComm.

Great idea! I have STalker ver.3.05, and have it on good authority that
that is the latest version. That's the only one I can say for sure about
right now.

I've looked thru all the stuff that is available to me and can't find the program or acc that would let you insert the current date in a word processor document! I know i've seen it in the past! Most probably on GEnie! Does anyone still ahve access to the GEnie atari RT library? if so could you do a search for insert, date and uuencode and send the file to the fellow that originally asked for it! I'm including the original post here.

: lamparty@concentric.net
: Tom Lamparty

Hi Tom,

Would you happen to have a little .acc program called INSDATE or something to that effect? Have been looking for it for a long time... I think the actual archive is called INSDATE.LZH. Failing that do you perhaps have -any- .acc or auto prg that will insert the date at the cursor position in a word processor that does have that feature built in.

Thanks a lot,

-Willis

Any help that you can give Willis, would I am sure be very much appreciated!

>Does that mean that CKBD/COMPOSE doesn't work to remap the keyboard or
>enter accented characters via 'compose' sequences in conjunction with
>Papyrus 4?

No, it doesn't mean that. Papyrus v4 behaves just like v3, i.e. there is no problem entering accented characters etc.

The new thing about Papyrus' font handling is that it supports the Unicode character set now. That means you have access to more than the usual 255 ASCII characters. In theory, there can be 65536 characters in a font and Papyrus should be able to access them all.

Most Speedo fonts contain more than 550 characters and the TrueType fonts that come with Win95 may be installed in a way that they contain 660 characters. Also, Bitstream Inc. (www.bitstream.com) has announced that they're working on a new TrueType font called "Cyberbit" whose standard version will contain some 8400 characters (and it will be free of charge -- only the standard version of course). As far as I have heard, this font is 18 MBytes large ...

Unfortunately, CKBD doesn't know anything about Unicode. So with CKBD you will still be able to enter the standard ASCII characters up to ASCII code 255 but no more.

On the other hand Papyrus 4 has an in-built text macro function. That means it can monitor the characters you're typing in and replace certain sequences of characters with other sequences automatically while you're typing. For example I've configured it to replace "--" with a single long stroke. Also, ";-)" will produce the smiley character and other characters preceded by an apostrophe will become accented characters (those which do not exist in the Atari character set, such as s, c, n and the like [I need those for Polish texts]).

The problem with cyrillic letters is that some of them look the same as latin characters but lots of others don't. For the latter ones you'd have to think of replacable sequences so they could be typed in easily. However, this would still require to type at least 2 latin characters in order to get one cyrillic. And this would slow down typing dramatically. This isn't a problem if you need this feature occasionally but Vadim lives in Russia so I expect he'd need cyrillic characters in almost any text he writes.

To me, a more convenient solution for the above problem would be to change the keyboard layout within Papyrus. Papyrus already has the keyboard window and the character set window so why shouldn't we be able to drag characters from one window to the other and change the keyboard layout this way? If changed keyboard layouts could be saved and loaded (or even linked to certain paragraph styles) writing with other alphabets than latin would be a lot easier ...

He's posting from the Microsoft Network, Hallvard. They use NT servers,
have agonizingly slow response tiem, charge more per hour than any other
network in the world (including AOL), and create huge numbers of essentially
useless newsgroups. Only someone who is totally clueless would consider
staying on msn.com longer than his initial subscription period.

Does that explain the problems?

Does anyone have a an email address for the SoftLogik guys that works. tech@slc.com does NOT work. They were supposed to out with a PC prog last month (grin), but I have heard nothing. Alas, They will never upgrade the Atari version of Pagestream.

IMHO Pagestream was the best of the lot way back when - very fast 68000 assembly routines and very GEM, however Calamus has far surpassed it in current support, development and DTP "tools". I still use Pagestream on my MegaSTE for many hospital forms (local).

No go... I've tried that as well. I'm beginning to suspect it has
something to do with my phone line here at home.

: Well, it depends on the model. The externals are OK as far as I know, but
: damn sure don't ever want to see another Zoom internal.

I know the externals are good... The modem that consistently gave me 26.4
and 28.8 connects was a Maxtech, and I couldn't keep the connection on my
ISP for too long, unless I got a good line. Now, with the Cardinal, I'm
able to stay on longer, without being thrown off for no reason.

What's with the Zoom internals you complain about?

: For $150 it's a bargain.

Got it. Just need to play around with it a bit more. I've put it on the
BBS computer. The initial connects kept getting me 24000, same with the
Cardinal, no matter how many times I tried. Might be something else. Still
am checking it out, though I'm beginning to lean more towards my own line
having problems.

: >A friend of mine had the unfortunate occurrence to have his modem hit as
: >well, while it was connected to his ST. Seems it took out several chips
: >in the ST besides just the modem. What chips, I'm not sure.
:
: Just the important ones, I promise.];^)

heh... As usual. It would be pretty expensive to replace them chips,
unless you had a replacement ST in the wings, like I do, which I'll be
using as a backup while I do my 38.4K project.

Except that Opus will not work with NVDI or SpeedoGdos. You need to find
and properly install Gdos 1.1 or any of its successors (G+plus,
FontGdos...). Best of luck, as I have never been able to successfully
install any of these and therefore cannot get charts or print (using
fonts) from either Opus or LDW Power.

Source record: 135666

It is the extension for files saved with the Magic Shadow Archiver. The program can be found in the Archivers directory of umich or one of it's mirror sites. msa_2_3+.prg is the latest version there, but 2 things! One, make sure you use the bin option in ftp before getting a .prg file and Two run a good virus checker on any disk made with msa, because it takes the boot sector and all when it compresses a disk. If the original disk had a virus, it will be there when you make the new one! No real sweat though! It isn't like you have an IBM or a Mac where a virus can really hurt you!

From: Tim <tkreider@nbn.net>
Message-ID: <543g5r$1sb@news.nbn.net>
Source record: 135668

Hi, I am looking for a method of converting Document files from Drafix 1 on anAtari ST to the current version of Drafix Professional on the IBM PC. I have a client that is upgrading and needs to convert his old documents. If any one has an old copy of a Drafix for Atari ST around, I may be interested in purchasing it, because I understand that some Atari versions included a "Port" program to do this. Please email me at tkreider@nbn.net if you can give me ANY info on possibly converting this. Personal thanks from Tim.

Message-ID: <326563A7.7167@flash.net>
Source record: 135673

Due to the constant updating of this sig, I am reposting this
information regarding the "Text-Movie Warehouse";

http://www.flash.net/~ambrosia/

a site dedicated to text based animations. Many Atascii (8bit) and IGS
(ST) files are available for free download, including viewer software
and links to emulators.

Our site is in desperate need of Movie contributions. If you have any
old text movies (any platform, including RIP and VT100), or you're just
looking for fun, please drop by.

This site looks best when viewed using Netscape 2.x and above, though
any browser should do.

See you there. Tom D'Ambrosio

tomo wrote this to All about A broken Falcon - any help appreciated:
t> Here are the symptoms; the picture is completely out of sync
t> and totally white (it runs like hell from top to bottom of the
t> screen). Every 1.2 seconds, I can see what appears to be
t> Falcon's NORMAL boot pic, but it lasts for a short piece of a
t> second, and, as it is out of sync, jumps across the screen
t> randomly.

It sounds strange, but I've had a problem somewhat like yours with a Falcon some time ago at my work. That time the problem was caused by poor contact with the memory card. With the power turned off, try to lift the card up and just replace it (do it a couple of times and you'll get rid of the oxides that may be on the connectors) and you'll get the picture back if that relly is the problem.
Also check out that all solderings on the CPU-clock modification are ok.
What monitor do you have?
If you have bad luck, you (or some program you've run) could have set the NVRAM to bad values that can't be displayed on your monitor. If that is the case, you should run a disk that's been created by a program called RESETNVR - when the disk is inserted and the computer rebooted, the NVRAM gets set to the factory defaults and all monitors can display the picture.

Good luck and best regards,

Claes

956. OBOLUS now available !!!

Newsgroup: comp.sys.atari.st
Date: 1996-10-16 00:00:00 UTC
From: Karsten Reincke <kreincke>
Message-ID: <542mf6$tc5@deimos.rz.uni-osnabrueck.de>
Source record: 135680

OBOLUS is available as resultware (= nearly FREEWARE)!

(1) OBOLUS is a whole knowledge representation system including
an inferencemachine for creating whole (knowledgebased)
expertsystems.
(2) OBOLUS is not only adressed to knowledge-engineers, but also
to those, who are not very familiar with that stuff. They
should be able to learn it.
(2) OBOLUS is an GEM-program an should run on each ATARI-system.
(3) OBOLUS contains hypertext-help-files for the ST-GUIDE-Systems.
The languages are English and German.
(4) You can get it by ftp @ cl-ki.uni-osbrueck.de
if you are following the path pub/export/kr
(Note: /kr isn't an abbreviation for my name
but for knowledge representation)
I have put it also into incoming/atari/ at leo.org
hoping that it will be sorted in.
(5) In both cases at least you should find the following files:
obfs100a.lzh /* the whole OBOLUS-system including ST-GUIDE */
obss100a.lzh /* the OBOLUS-system without ST-GUIDE */
obsg100a.lzh /* the prepared ST-GUIDE-system */
If you want to distribute the system on small 720 discs,
you should split the system in the way of obss****.* and obsg****.*
otherwise you should distribute the whole system obfs****.*
(6) The documentation includes examples.
(7) OBOLUS has been making free, because I hope to get
knowledge bases back made by other people for showing
that the working-concept of OBOLUS does that,
what it should do. If you need help for creating
an OBOLUS knowledge-base, send e-mail.

Please, let me know, if there is any fault in the files.
I will update the set immediatly and will mark such updates
by changing the suffix A to B and so on.

OK, perhaps OBOLUS is a little step for getting
knowledge representation as well-known as computer added
text-writing.

Greetings KR (and this is an abbreviation for my name)

957. FS/T: Atari ST games [10/16/96]

Newsgroup: comp.sys.atari.st
Date: 1996-10-16 00:00:00 UTC
From: vga2000@ix.netcom.com
Message-ID: <542pi5$eq9@dfw-ixnews5.ix.netcom.com>
Source record: 135681

If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it). Also, please be sure to read the entire message carefully before you ask me any questions. This will save us both some time. Thanks! -- MJN

*****

All VGA FS/T lists are updated weekly and are available on the WWW at http://www.io.com/~vga2000/

This list was last updated on 10/16/96

I have the following Atari ST software for sale or trade.

Unless specified, all items are *NEW* and are still shrinkwrapped.

SHIPPING ANYWHERE IN THE CONTINENTAL U.S. is $3 for the first item and $1.25 for each additional item, unless otherwise listed. If you order enough items I can weigh the order as a package, which might reduce the shipping costs.

Large orders will be weighed as a package, to reduce shipping costs.

SALE CONDITIONS:

1) Sales are first come, first served. Please include your full postal mailing address in your reply.

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be given priority (especially if the trade offer overwhelms me). I collect for over 40 different systems, so please feel free to send me a trade list. Ask for my want lists!

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. My personal philosophy is that something is only worth what someone is willing to pay for it.

8) Payment must be made in U.S. funds, by either check or money order, drawn from a U.S. bank branch. Orders from outside the U.S. are also accepted.

9) I reserve the right to refuse any sale or trade offer, and to correct mistakes made while typing this message.

I have come into this halfway through, but I used to use an auto program on
my ST called Mortimer, which did macros and image viewing etc and also
inserted the date into documents by right clikcing on the corner date
display. I still have the file archived, its quite large, (approx 150k
zipped) as the program does quite a few other things as I remember. I've
never tried it on my Falcon so I have no idea if it works on that, being a
CAF user I try to keep auto folder stuff to a minimum. Anyway if anyone
really wants it I can email it. Let me know.

>find the modules

How are the file names of the modules spelled? Are they in lower case? The Minix file system ist case sensitive and it may be that Papyrus only looks for *.EFM but not for *.efm (or even better *.[eE][fF][mM]). Try to change the extensions to "EFM" or "efm" respectively.

Sorry to jump in in the middle of a conversation, but I tested out several
Zoom modems when they first came out in '91 or so. Comparing them with a
UDS modem, the Zoom modems performed like total crap. Dropping connections
for no reasons. Unable to a decent through-put. They were basically
unusable for the remote network access we needed them for.

Maybe they've improved since then, but I'm not giving them a second
chance...

There is no extended FAT info.
More: There is no FAT info at all.
Exactly: VFAT only uses additional directory entries that should be
ignored by older operating systems.

I have received a flyer from Hisoft regarding upgrade prices from
Papyrus 3.

Papyrus 3 to Version 4 = 39.95 ukp for non support members
= 37.95 ukp for support members

hisoft are also giving a font cd with the upgrade :)

there was no details of the normal selling price.

The platform slowly dies.

But it dies with dignity rather than having theives rummaging around
looking for pirate software and ensuring it's swift demise.

>Do you want all those precious piece of code to be lost ?
>It is now your DUTY to
>keep the Atari ST alive by spreading software, will it it be illegal
>or not.
Sorry, but this is rubbish :-(
You wouldn't be hoping that someone is going to send you some nice
expensive piece of software free of charge now would you ??

The Atari has been dying for years. A 4MB Falcon is well overpriced in
comparison to higher specification PC's and Macintoshes and it's user
base has slowly been dwindling away to the other platforms.

I completely fail to see how giving you a copy of my software will
help the situation...

> What are you going to do with the Atari software you own ?
Continue to use it until I have a better replacement on my Mac.

>1/ You legally keep it and you will later trash it with your ST in
>some years. You never gave it to anybody and it you help it to vanish.
Yep... That's the one for me.

>2/ You spread it and allow people to keep using it for fun.
I have invested several hundred pounds in Atari software, I've had my
moneys worth and the computer has served me well. I'm damned if I'm
going to give it to some freeloader for nothing ..... Why the hell
should I ???

>if you're still out there, send me a note!)..... and a whole lot of
>other stupid excuses I haven't posted any new lists for... ages!

WHAT'S THIS ALL ABOUT????

I wrote that message ages ago- I believe it was the first list after a long
abscense (Mark Smith in the UK was supposed to help me out, but for some
reason he never "showed up" on the net- neither through news or email) so I
decided to start doing it all on my own again.

What puzzles me is why you post a copy of that list here.
You also mailed me the same message, and I asked you the exact same things,
but the mail returned as your username wasn't found...

Does anyone else know what this is all about?

You simply need TAR and GZIP.

I believe these are available from a.a.u.e., I think the directory was called either GNU or Minix. Inside that there is a directory called TOS, and there you should find GNU TAR and GNU ZIP.

Then you just run gzip -d <filename> and then tar -xvf <filename>.

You do this by double-clicking on the gzip.ttp or tar.ttp icon and then typing the parameters into the resultant dialogue.

Or, if you will be using these a lot, use install application to make them run when you double click on the archived file - I'm not sure if the standard desktop will let you put the parameters -d or -xvf in in this case though.

r> Are you trying to tell me that despite the fact that the EZ135 has
r> been working fine for six months with HDDriver v3.51 and is not
r> recognised when rebooting after installing HDDv6 will work if I
r> change the SCSI cable?
Newer versions of HDDriver are faster and will highlight any problems with your SCSI chain, for example I could get away without terminating the drive with V3.51.

Regards, Derryck

Source record: 135728

I have just purchased NVDI v4.11 R3 (according to the display as NVDI loads) and am having one problem.

I have a number of Truetype typefaces (all of which work fine with NVDI 3), but these give a problem under NVDI 4.11.

When NVDI loads, a number of messages similar to the following appear:

C:\FONTS\TTF\S11N.TTF: file damaged!
(head: 61cb4274 != 64913fae)

What does this mean?

Why does it happen?

What should I do about it?

Any help would be appreciated.

: >something..

Sounds like you're using Lynx ?
When you select a binary to download using the lynx web browser,
you should use "d" rather than "return". This means you are downloading
the file rather than trying to view it. Once it gets downloaded you
should get a prompt asking if you wish to save the file to disk...
answer yes and enter the desired file name. From there you'll need
to download it from your unix accout to your atari using ftp, zmodem,
or whatever means your provider uses for binary dumps to your PC.

Hope this helps...
Brian

Karl Foley (kfoley@cameo.co.uk) wrote:
: Is there anyway to make NOS use negotiated IP addresses over a PPP link? My
: provider is changing to negotiated IP on login.

There is a little program that lets you do this with a Slip connection...
but I don't know if it will work with PPP. I forget the name
of the slip IP config file...but I believe I got it from umich in
the Oasis directory. Basicly, you use stik to dial in...disable stik,
and run a little tos program which will get the current ip from STik,
write it in your NOS config file, and then launch NOS. Of course you
need to disable the dialer in NOS...as you will already be connected.

One thing you can try...remove the IP address from your NOS config file
or change it to 0.0.0.0. This, in theory should work...In my case,
it worked for a while, and my provider changed something and it no
longer worked. I've not tried it in quite a while, so it might work
agian now! It sometimes took a few seconds for the IP to be negotiated.
Also...make sure you give plenty of time before NOS kicks anything (i.e.
nntp)...if it kicks before the connection is established...you most likely
wont get a connect at all.

Good luck...
Maybe we'll get that PPP version of STik soon :)

Brian

I understand Richard. We have gone through these pains here in our shop and have isolated the problem to be the cable. By replacing the cable with a higher grade cable, all problems went away.

Also, all of our users that were having various problems, varied from non recognition, data loss, corrupted files and bus crashes were able to solve these problems simply by changing the cable to a higher quality product.

HD Driver seems to be "too fast" for a low grade cable. It is strange and it took us a long time, many hours of testing to come to this solution. After finding this solution, we all gave ourselves a kick in the pants for not thinking about this in the first place.

But, as people have mentioned, ICD works, AHDI works and even earlier versions of HD DDriver worked. We focused on the software for the longest time.

Trust me! Try it, it works!

All the best

You do mean the FAT/BPB of the hard disc, not the floppy disc?

I have brought files to my TT030 from Windows95 without any problems.

I find it hard to imagine how TOS could be confused into damaging
the FAT or BPB of a hard disc partition after reading any kind of floppy
disc.

Has this happened consistantly, or was it a one-off occurance? If so, I
would suggest that it was not caused by the format of the floppy disc - the
problem is certain to have been caused by something other than the disc from
Windows95.

When the sun falls down.

> Read: Those with the Fastest Falcons :)

Sure. Wasn't the Hawk released over a year ago (two maybe?)? Oh, was that
another non excisting product from Wizztronics that they announced?

The Barracuda is now shipping! What a joke! :-)))

I don't care as the Hawk will never come out anyway and I doubt
that it would be much faster and it would be more expensive as well,
so why wait for something that doesn't exsist?

Maybe you know something that nobody else know?

BTW. I was told that the Barracuda is released... ;-)

Have you tried AMCGDOS, much quicker than GDOS & available ob umich ?

I got it to work with OPUS.

I also got the Meta.sys to work with GFACAD.

>>is
>>now no longer entirely MS-DOS (as an Atari would see it) compatible. I

Dunno if this is related?....Using Win95 (I like it?) and downloading ATARI software, then porting to my ST (One Floopy drive A only), I get problems such as the ATARI only recignising the disk if set as drive B

In other words I get a blank Directory, But If I click on the none existant drive B, get the "insert disk into B" message, click OK fooling the ATARI into thinking I have B, and the directory appears?

This only happens with software ported from My PC HD?, As I only really port ATARI software then its not usually long filenames?,

..

Wish I had a drive B...or a HD.....or a Falcon.....santa!..SANTA!!!!

Source record: 135742
Cross-posted to: comp.sys.atari.st,alt.music.midi,rec.music.makers.marketplace,rec.music.makers.synth

Hi,

I have an Atari 1040ST for sale, including a mouse, mono monitor, docs, and some software (looks like bundled stuff, Basic, a word processor, etc.). The machine looks and works like new. I'd be surpized if it has more than a couple of hours use on it. I even have the original packing for the CPU (but not the monitor).

I'm asking $100 + shipping & COD (cash only). I will accept checks but I would want it to clear before shipping. The unit is guaranteed to work when it arrives.

I really don't know much about these machines so someone let me know if my asking price is way out of line.

I will also consider trades for PC hardware, classic arcade PC Boards (or entire units), a system capable of running Atari 800 games, or some combination of these.

Feel free to make offers.

Thanks very much.

Dan R.

I have used floppy drives in both my windows95 and atari stfm machine and the long name format does seem to corrupt the disks.

> I find it hard to imagine how TOS could be confused into damaging
> the FAT or BPB of a hard disc partition after reading any kind of floppy
> disc.

I do not understand the technical implications of what I am claiming, but I can certainly say it happens consistently and only since I started using the win95 operating system.

989. HELP: Need proper Pagestream Flag settings on TT w/SLM-605

Trying to get Pagestream to run properly on my TT with 2 megs ST ram/
16 megs of TT ram and an SLM-605 laser printer..
Can I run pagestream in Fastram or will that mess up the laser
printer.
I had it working great on my Mega4 ST, but after changing the ID so it
didn't conflict with the TT (now #5), I can get other prgs to print,
but Pagestream won't run properly using TT ram. What can I set on
this to get it done right.. Mike

990. Memory expansion plans wanted..

Message-ID: <32656514.6F7@plea.se>
Source record: 135745

Hello, I recently got my hands on a Mega2ST (with blitter) rev 5.0 and a
520STF rev D.
I want to expand them, but have never expanded models with built in
expansion space on the motherboard (I have only done (a lot of)
"piggyback" expansions on 520:s before), I would like to expand the mega
to 4M and the 520 to at least 1M....
(I would also like to know how to install a blitter in the 520 in the
already existing empty socket inside it).
I have searched the net for the plans i distinctly remember from
earlier, more ST-active days, but been unable to find out any!
Is there a file avalible somewhere with the info I want?

Best Regards:
David H

Your "provider" obviously has no clue about how to run a /service./

NT is not a network OS, it's a GUI for clueless sysadmins. BackOffice is "the
NT Plus Pack," and frankly, I would not do business with any ISP running NT as
his OS unless he offered shell access and had a demonstrated track record
with Unix; there are too many clueless admins that simply bought their
packages and don't know how to administer.

Get a /real/ ISP.

The 14.4k models use the Rockwell v.42bis emulation in software - which means
they are really only 9600 bps modems, and require a fast CPU to compensate.

24000 is about average - keep in mind that I count myself lucky to get a 26400
connect, and I can't recall EVER seeing a 28800 connect. Unless you're
running a direct, dedicated phone line with no switches (including the ones at
the telco), don't count on the max connect speed; it just doesn't happen
unless conditions are absolutely perfect.

You're right- you can't post to them, but you can read the maus newsgroups.
I've managed to get them through a gopher system in Germany as well as
through Dejanews.
I've got the URLs in my hotlist at my provider's UNIX system- I'll download
it on my STe now and post the details tomorrow, and hopefully I'll make
links to them on my Atari page when I get the time.

1001. New harddisk driver: why? which? how?

Newsgroup: comp.sys.atari.st
Date: 1996-10-16 00:00:00 UTC
From: hallvart@sn.no
Message-ID: <326434c411ca3d7@sn.no>
Source record: 135756

The subject says it all... well, almost.

The problem is this: I'm using "The Link II" SCSI host-adaptor for ICD which works fine, but I've heard people say that it's not fully AHDI compatible which I do need in order to run MiNT on my machine, which is what I've recently installed.

I have received an error message regarding partition D:\ which is the only partition it complains about. It was pointed out by someone that it might be because of a size limitation (my partition D:\ is the biggest one at 250 MBytes).

So.. it all comes down to this- I want to make my system compatible with all systems as well as efficient adn well-working, so I'm willing to do what it takes in order to make this work.
If this means reformatting the whole drive again etc. that's okay as well, since I have another SCSI drive which I've been using to back up my whole regular drive.

As for the software, I don't really feel like using lots of money for this as my existing system works with everything but MiNT (if the driver is the problem there- which a lot of people have pointed out that it probably is), and I don't really need MiNT that badly, but I'm interested in trying it out and see how it works.
I've downloaded several pieces of harddisk software, like AHDI from Atari as well as CBHD.. Many people seem to appreciate CBHD, and even more people seem to praise HD-Driver, but that's out of the question I guess unless I *really* need it.
By the way, what is the difference between these harddisk systems/drivers?

What should I do exactly regarding all of this? Are there limitations to partition sizes I should care about, or was this just because of the ICD software I got the error message?
I'm open to comments/suggestions of any kind regarding this subject.

My system:

- Atari STe/ 4 Mbytes RAM, TOS 2.06
- Quantum Lightning 540S SCSI harddisk
- ICD Link II SCSI adaptor
- NEC Multisync II monitor (all resolutions although I usually stick to monochrome hires)

Get hold of "Okami"! That's what I'm using now on an STe.
It'll probably run on a TT, but I'm not 100% sure.
Perhaps someone else knows.
It supports among other things SOUP packets, and I'm very happy with it-
saves me lots of online time.

If you want to install it and need some help, then please mail me (setting
it up is a little tricky as it involves a little more than clicking a few
buttons).

If you're interested, then go to the Okami homepage:

http://www-hze.rz.fht-esslingen.de/~690126/okami/

In the FWIW department: I plugged my Seagate 4 gig into the Atari HA last night just to check things out - it works, up to a point. However, the Atari host adapter only recognizes the first 4 partitions - not very useful when one has a very large hard drive. I suspect that up to about 1 gig, you would have no problems, but above that, you'll hit the "1 gig barrier" that AHDI exhibits. Apparently, Atari cut corners on the host adapter even more than I knew.

Mark,
You need some basic unix tools here...
Namely gunzip, untar, and compress.

You can find these via ftp://ftp.toad.net/umich/

I can't recall exactly what directory they are posted under...
I belive there is a little package in the root Atari directory there
that contains everything you'll need for accessing the various archives,
and some quick documents for using them. If you can't find it...let
me know and I'll help your further.

In the case of a file ending in Z...you need gunzip...if you have
a shell account with your provider...you can unzip it there...type
man gunzip to see the commands that are offered.

If the file is named something like blah.tgz...then you'll also need
to untar it. Here's how it works...

tar glues the files together into one big file...
gzip compresses it so it takes less disk space/transmission time.
Hence the extension .tgz

To open the archive you'd first umcompress it:
gzip -efv file.tgz

The file name might change on you to something like blah.tar...
or it might just drop the z and say blah.tg.

Now just untar it:
tar -efv blah.tar

Hope this helps,
Brian

Yeah, MultiTOS is quite slow. I haven't had the chance to try out Magic, but from what I've heard from people who have, is it's very nice, fast, and stable! It's supposed to be more efficient than TOS itself, removing some bugs and streamlining it, and multitasking is supposed to be very fast!

> Oh!! by the way... does anyone know about a browser for the Falcon with PPP conection? There is only one
> server with SLIP conection by my area, but it is quite expensive!

Well, since you already have a Mint setup, you could use MintNet, CAB, and the CAB-for-MintNet CAB.OVL. I've heard that it works better (in some opinions) than STiK, can do SLIP, CSLIP, and PPP, has a lot more software for it, too, but is a bit much to get set up. I haven't been able to get it going (although I haven't been able to get STiK working either). So if you have the patience to get a MintNet setup, try that!

Yes, but its going to be using the Apple-talk protocols for the comunication,
but Atari's (currently) have no support for this. Making an Apple-talk
compatible driver would not be trivial either.

>
>Has somebody ever connected a Falcon(Lanport) with
>a Mac like Localtalk?

Nope.

The Mac uses its own protocol to comunicate via the LocalTalk interface. Technically, it would be possible for someone to implement a LocalTalk protocol for the Falcon/TT/MSTE but it is unlikely to happen....

MiNT-net does mention that it could be used as the core to such a protocol stack, should someone attempt it.

ISTR there being a Unix attempt at LocalTalk compatible protocol, which could (theretically) be ported to MiNT-net. As I said, this is unlikely to happen, as it would (I guess) be a substantial amount of work.

>slower.

Well, to interact with the program you would have to sit in an evnt_multi loop, and rely on the AES not to take too long. Also, under GEM you should make it resolution independent - which effects apex quite a lot (in 256 colour mode it doesn't enable the masking etc. AFAIK) - the idea of dithering may come into play.

Strictly speaking, a GEM program should be using the vdi to draw onto the screen - from my experience this would cause a big difference in speed. (compare GEM-DEU 0.7 with TESTDEU2 - the first uses the VDI, the second uses an assembler routine... much faster)

The alternative to plotting the pixels etc. using the vdi would be to use off-screen bitmaps and blit them onto the screen (using vdi). This will add extra memory requirements to an already memory hungry application.

>I have not seen Apex 3. But under GEM, windows are redrawn by the software -
>by Apex in this case. So Apex could still redraw the windows as fast as it
>wanted to.

No, I mean the windows themselves (not the contents). Real-time resize/move (like oAESis or WinX, but MUCH smoother). [I suppose that I ought to point

out that the Falcon was nemesis and ABurner accelerated, so this might have
had something to do with the speed... :) It was running 640x480xTC mode though]

>It is quite likely that the user interface would end up a little slower under
>GEM - because GEM is so much more advanced, it is understandable that it would

TO be honest, I wouldn't say that it is that much more advanced (than apex 3).
Apex 2, yes, true - this doesn't have to deal with windows, rectangle lists
and the rest.

>be slower. There is much more to be done, for example another window might
>be on top of Apex's window, then it has to redraw it in two bits.

Apex 3 already handles this... Doug little had about 10 windows open while
demonstrating the real-time move/resize...

>>No, GEM is not right for all programs.
>
>No it is not right for all programs. But it is right for virtually all
>application software. I believe Apex would be greatly improved if, for example:

>* I could just drag a file onto the apex window to load it

>* I could have easy access to the desktop while using Apex (rather than having
>to "task switch" from Apex to get to the desktop)
>* If apex had a standard user interface (which it would with GEM)
>* And so on.

I agree that this would all be nice, but it is not FREE! There has to be
some compremise, and in Apex, IMO, it would not be right to compremise its
power by forcing it to comply with GEM standards.

>All this can be done with GEM better than any other way.

Yes, GEM is the way to support this, but you will have to be some trade off
against these advantages...

Could it be because you using a Falcon? I've heard that TOS4.x has
strange bugs in it that make Falcon's much more picky about disks than
the good 'ol STfm...

I think I have a patch around here somewhere...

1018. Falcon SVGA monitor

Newsgroup: comp.sys.atari.st
Date: 1996-10-17 00:00:00 UTC
From: comezana@pirulo.cac.psu.edu
Message-ID: <545tcq$n6g@r02n01.cac.psu.edu>
Source record: 135623

Hi!

Does anyone know if this could be used on a Falcon?

Philips 16" high resolution workstation grade monitor

Specs:

CRT: 16 inch (15V), in-line gun; 0.26 mm trio dot pitch; P22 phosphors
(medium-short persistence); antiglare.

Power Supply: 92 to 132 Vac or 184 to 264 Vac, selectable.

Input Signals: RGB analog (.07 V p-p) with composite sync on green
(0.3 V p-p) 75 ohm input impedence.

Scanning frequencies: Horizontal:64Khz Vertical:60Hz non-interlaced fixed
frequency.

Retrace Times: Horizontal 2.8 usec Vertical 550 usec.

Video Amplifier Bandwidth: 110 Mhz (at 3dB) linear amplifiers.

Resolution: 1280x1024.

Misconvergence: 0.15 mm in the centre; 0.35 mm within a circle of diameter
equal to the image height; 0.45 mm in the corners.

EMI/RFI: According to FCC-15J Class B and VDE 0871/6.78 Class B

Safety: UL, CSA, DHHS, and VDE approved.

Because it's a fixed frequency monitor, it's great for many Sun,
SGI, HP and other workstations. They can be used as a second monitor with
many PC s, but needs a special card if used as a bootable dos monitor.

Please respond ASAP! Thanks.

Gustavo

Hate to tell you this, but there is no cl-ki.uni-osbruek.de ftp host!
there is a ftp.rz.uni-osnabrueck.de host, but there is no pub/export
directory there! I take it from the lack of an authentic e-mail address
that this was someones idea of a joke?

On 16 Oct 1996, it was written:

>OBOLUS is available as resultware (= nearly FREEWARE)!
>
>(1) OBOLUS is a whole knowledge representation system including
> an inferencemachine for creating whole (knowledgebased)
> expertsystems.
>(2) OBOLUS is not only adressed to knowledge-engineers, but also
> to those, who are not very familiar with that stuff. They
> should be able to learn it.
>(2) OBOLUS is an GEM-program an should run on each ATARI-system.
>(3) OBOLUS contains hypertext-help-files for the ST-GUIDE-Systems.
> The languages are English and German.

Hi

I am looking for shareware software for
8031 Microcontroller system for Atari (author: Jurgen Piscol).
Can you send me this files (ca.25 files) as compressed file.
I know that this software are on one of Atari
CD-Rom (Alfa probably).

Thanks in advance
Best regards
Jacek T.

>>furniture - just easier.
>>
> Although it wouldn't deprive the owner of their 'sofa'.

True enough.

Let's put it another way - someone, somewhere, has to buy at least one copy to crack it and distribute it. I can't see any reason why /I/ should pay for software, and then give away copies of it. If you're a great philanthopist - go for it. Just don't get caught distributing cracked copies of software that I wrote and released as shareware. Or for that matter, that anyone I have an email address for wrote.

Succinct? I think so.

I've yust read, that there are still faults in the adresses.
I back your pardon.

OK: my adress: kreincke@cl-ki.uni-osnabrueck.de
(or explecitely and maybe better: kreincke@hal.cl-ki.uni-osnabrueck.de)

And you can get the files using your ftp management by:

ftp hal.cl-ki.uni-osnabrueck.de

and using the path pub.export.kr

There you should find the kr-system OBOLUS

GR KR

You can certainly use the PeeCee to download files; you can transfer them to the ST either using Ghostlink, or sneakernet - format the floppies to 720k (assuming your ST's drive is double-sided) on the PC, and that's all there should be to it.

1035. Apex for MagiCMac?

Newsgroup: comp.sys.atari.st
Date: 1996-10-17 00:00:00 UTC
From: zan660@aol.com
Message-ID: <546ahc$m0g@newsbf02.news.aol.com>
Source record: 135640

Any plans to make apex work under MagiC? No there is no DSP, but who needs a DSP when your running MagiCMac on a 68040 or 200mhz PPC. There seems to be a much larger market for a product which runs under MagiCMac(and PC), the problem is that there is no decent animation or retouching software. Apex could realy scream under MagiCMac (you should see RayStart!!!)!

Swampy!!!!!! hiya :)))

I just started using MagiC on my PeeCee, I run CAB for checking my web page is compatable, I have installed KIVI because this pile of plastic doesent have a qwk reader I can get to grips with, I have imagcopy and a few other programs to aid me converting artwork, and actually making PI3 pictures because I have no mono monitor for my ST (Yes my favroute CANVAS works),

What would be nice is an experienced MagiC user, someone who is a helpfull chap? hehehehe who could put together a list of software that does work?...wouls save keep seeing nasty bombs on my PC :)

Or is there already such a list, ?

Cheers.............!ynoT

>ten minutes!! Most of the applications don't work and I always end up
>reseting my Falcon... Is there a version wich REALLY works?? What do
>ya all know about Magic?...

I use MagiC 2 on my STFM (you'll need version 5 for the Falcon). I can easily run multiple copies of my compiler whilst doing other things like being online. I can even run some games like Populous in singletasking mode.

With MagiC the trick is to identify the odd program which makes the system fall over - it will probably be worth doing with MiNT also. These are usually older programs or little utilities which hook into undocumented parts of the system. Once these are identified and removed MagiC is rock solid and can run all day (even with my development programs crashing) without need for a reset.

>Oh!! by the way... does anyone know about a browser for the

Until STiK supports PPP you'll have to use the MiNT PPP drivers with the MiNT cab.ovl.

"Spameater" ;-) cool one! Go get 'em!!! :-)

Anyway, back to the harddisk driver... perhaps that's why I got the error
message on partition D:\, since that's the biggest one, and it certainly
exceeds 243 MBytes. MiNT didn't complain about the other partitions, and
they were smaller (the biggest one of them being 200 MBytes). I guess ICD's
software might work anyway then...

Yeah, I guess you're right in saying that HD-Driver isn't expensive and
worth the price asking (most Atari software is definitely worth the money
asked), and Bull Gator's m$ stuff is wayyyy overpriced.
But you do get all the extra "features" which you don't with Atari
software, like: an endless list of bugs, alpha-versions pre-released as
full versions (which of course need to be upgraded 3 or 4 times before
they're usable at all) and the obsolete factor ;-) ;-).....
(you seldom get these kind of "bonuses" on Atari software) ;-)

>money - have you priced MS-Dog lately?

I'm really confused about this business with harddisk drivers,
compatibility with MiNT etc...
I've been experimenting with different drivers/formatting etc. using CBHD
as well as Atari's own AHDI, but they both seem pretty tricky to set up.
It's been a frustrating experience, and I'd like to stick with the ICD
'SCSI utilities' that came with my "Link II" host adaptor since that driver
and the utilities work perfectly with my system.
I've got version 6.5.5 of the "ICDboot.prg" (harddisk driver), and there's
an option in the utilities for "AHDI compatibility".

What do I need to keep in mind when making my system compatible with MiNT
as well? I have no idea why I get that error message when booting MiNT and
returning to GEM. It also seems that I can't double click on a .prg, .app
or whatever since GEM seems to recognize these files as text files and asks
if I want to view or print them!
What's wrong with my setup?

From: samsung@nevada.edu
Message-ID: <54650k$egp@news.nevada.edu>
Source record: 135647

Does anyone know where I can ftp a C++ compiler for the ST?

If it makes any difference, I am on an 1040STf TOS 1.0 1MEG ram...

In exchange, I will gladly give you a list of MANY ftp sites that support
atari software. I found a C compiler, but the thing is... even with all
these FTP sites I have, I still need to know the name of the program.
Either that, or I can ftp and uncompress all day...

Any help is appreciated, thanks

Fred Flintstone (mbecroft@tos.ak.planet.gen.nz) wrote:

>* Pictures draw _very_ slowly.
>And this "first time" slowness occurs each time the zoom is changed.

Usually, pictures need to be dithered which can be very time consuming. And each time you change zoom they have to be scaled and dithered again.

>Can it be speeded up?

You could turn off picture display so they will only appear as simple frames. Look for a menu entry similar to "Display..." in the "Settings" or "Options" menu (sorry, but I haven't got an English version). Keyboard shortcut could be Shift-Control-D.

>* Vector graphics from Kandinsky in GEM format come out wrong - the
>colours all become black when imported into Papyrus.

Papyrus doesn't support colour vector graphics -- not yet. Actually, it should convert the colours into shades of grey but apparently it hasn't. Could be a bug.

>Can this problem be avoided?

Edit the vector drawing in Kandinsky and change all colours into greyscales.

>This is fine, except that each time a new document is made, the icons
>are scaled again!

>This is obviously a bug, but is there some kind of workaround?

The only workaround I could think of would be to use a 10 pt system font.

>* Objects cannot be grouped - or can they? How is it done?

Not possible -- unfortunately.

>* Can text be piped from one text frame to another (for multi-columns)?

You need to edit so-called masterpages. Each page in a document is linked to a masterpage which controls its basic layout. If you create a new document there is only one masterpage (called "Standard" in the German version) which is valid for all document pages. You can create new masterpages in the Masterpages dialog and assign document pages to it. If you change the layout of the masterpage the layout of the assigned pages will be changed as well.

In order to get multiple columns you should create a new masterpage and first change its layout in the Page Layout dialog. There you can specify the number of columns. After that, you can edit the masterpage directly and resize or

re-arrange the columns, copy columns, add lines, boxes, pictures etc. To do this, you have to switch to the masterpage dialog and click a button whose caption should be something like "Go to masterpage". The masterpages will appear in the document window and if the display of object frames is turned on (in the Display... dialog) you will see the page layout at once.

>* Are guidelines possible, and can frames be snapped to guidelines?

No there aren't any guidelines (as far as I understood the meaning of "guidelines") nor any snapping to a grid. However, you can draw ordinary lines on the masterpage and make them appear on the screen only. If you hold down the Shift key while drawing the lines they will be exactly horizontal or vertical. Also, there's a Size and Position dialog where you can determine an object's position numerically.

>Any other things that are worth knowing about Papyrus?

The grey area next to the document page (in a window) is a huge clipboard. You can drag objects onto it and drag them back to the document. If you hold down the Shift key while dragging the objects will be copied instead of moved.

There are lots of keyboard shortcuts for selecting characters, words, sentences, paragraphs and pages (try combinations of Alternate+character). Unicode characters (only available with SpeedoGDOS or NVDI >= 3 installed) can be entered in dialog text edit fields using the Character Set window or by entering their Unicode equivalent, e.g. [U+2022].

If you want to do something specific with your text, do it the way you think it would be logical to do. For example: "I'd like to move that word somewhere else" -> Select the word (double click) and then drag it. Or: "I'd like to select multiple independent words just like Icons on the desktop." -> Select more than one word while holding down the Shift key.

|
Do you know that for certain? It seems to me that Appletalk would add a lot of unnecessary overhead for an application such as the Quickcam. I would have though they would have used a simple and fast standard serial connection, such as one would find in use with a Mac modem.

That's true...

I'm guessing that the program relys on rountines written in assembly to
get the job done fast, as far as displaying goes.

> Strictly speaking, a GEM program should be using the vdi to draw onto the
> screen - from my experience this would cause a big difference in speed.
> (compare GEM-DEU 0.7 with TESTDEU2 - the first uses the VDI, the second
> uses an assembler routine... much faster)

The only speed comes from using a program like NVDI.

And yes, my Stalker window isn't as fast as a text only screen since I
don't use Quick ST. Reason I don't use it is because it screws up my GEM
interaction from time to time, but that's a differnt story.

> The alternative to plotting the pixels etc. using the vdi would be to use
> off-screen bitmaps and blit them onto the screen (using vdi). This will

A bit like having an extra screen in memory and trying to fit it all in a
window or something...

> demonstrating the real-time move/resize...

Definitly a customized routine in asm. Those are usually much faster than
the defualt GEM system.

> >>No, GEM is not right for all programs.
> >
> >No it is not right for all programs. But it is right for virtually all
> >application software. I believe Apex would be greatly improved if, for example:
>
> >* I could just drag a file onto the apex window to load it

You can, theorectically, still have Apex do that without being a full GEM
program. Just have it read the command tail(the file dragged) and let it
work from there.

> >* I could let Apex anti-alias an animation in the background while I get on
> >with something else

It may be also possible for Apex to, when tasked switched, to do the
processing in the background and have a small window updating the
information and such.

> >* I could have easy access to the desktop while using Apex (rather than having
> >to "task switch" from Apex to get to the desktop)

Better than not go back to the desktop at all without quitting.

> >* If apex had a standard user interface (which it would with GEM)

If the interface works, what's the problem?

> I agree that this would all be nice, but it is not FREE! There has to be

> power by forcing it to comply with GEM standards.

I'm sure there are some programs that can not completly depend on GEM
though they use a few smaller functions.

Message-ID: <32667CC9.69E@interpoint.net>
Source record: 135654

Hi all, I've been an Atari 8-bit user for years. I just picked up a 1040STF recently to experience the difference between the ST and the 8-bits.

What is the easiest way to download files from the Internet to use with my 1040?

Do I need to use the ST directly with a shell account? OR could I download files with my IBM and transfer them to my Atari. I would definitely prefer to use my IBM with a 28.8 versus the 2400 my St came with.

Any advice would be appreciated, Thank You.

-Rich.

1050. Falcons Speaker

Sounds like a lack of media change detection here. Are you sure all your
floppies have unique disk id's. If not try re-formatting a few.

Some work, some dont. Most of the ones you can get from microsoft's ftp site (the free ones you get with Windoze) are ok. NVDI 3 complains about the ID when you first install them but not thereafter. It appears to dream up some id's of its own but I've had no problems using them.

1054. CAB141 problem offline

Newsgroup: comp.sys.atari.st
Date: 1996-10-17 00:00:00 UTC
From: phil@goldings.demon.co.uk
Message-ID: <845653174_OASIS_@goldings.demon.co.uk>
Source record: 135659

One of my problems with the new CAB is that although it works fine whilst online, I am unable to view pages which I have already loaded if I run it when I am not online. It does work to some extent after disconnecting ie. I can look back at pages that I have just downloaded, but even this is not reliable. And if I exit and re-run CAB (with STik enabled) I cannot view any pages by using the Hotlist to select them.

What happens is that when I select a page from the Hotlist that I know is in the cache I get a brief message "Network is down" and a blank grey page, this also appears to empty the corresponding file in the cache.

I downloaded CAB 1.41, Stik 1.11, CAB.ovl 1.2h, and WWWinst1.00 from Flinnys site on the 13th October. Having read about other peoples experiences I used the new installation program to create a new setup seperate from my WWW131 setup. After finding this problem I got CAB1.41a from the YAC site but this has not helped.

I have tried using CAB.ovl 1.18 but this does not help. If go back to using STik TSR 0.1, STik 1.08, and CAB.ovl 1.18 this does solve the problem.

Any ideas?

Phil

1055. ANNOUNCE: Free download

Newsgroup: comp.sys.atari.st
Date: 1996-10-17 00:00:00 UTC
From: Rolf Nilsson / RONI MUSIC <roni@mbox317.swipnet.se>
Message-ID: <32669F70.6B0@mbox317.swipnet.se>
Source record: 135660

Hello,

Roni Music Home Page offers free down load of the Sweet Sixteen MIDI
Sequencer for Windows and Atari computers.

Sweet Sixteen is a comprehensive and powerful MIDI sequencer for
PC/Windows and
Atari ST/STE range of computers.
Sweet Sixteen offers Piano Roll, List and Transform edit pages as well
as a
dedicated Mixer page you can use for your favourite synthesizer.

Two versions are available:
1. A demo version which is a complete version of Sweet Sixteen with all
file saving disabled.
2. A "lite" version which lets the user save files but certain other
functions are disabled.

Check it out at: http://home1.swipnet.se/~w-11396

1056. Reading GEM file in Windows 95

Newsgroup: comp.sys.atari.st
Date: 1996-10-17 00:00:00 UTC
From: Alyre Chiasson <chiassa@umoncton.ca>
Message-ID: <32662B19.9E4@umoncton.ca>
Source record: 135661

Is there any way I can convert a GEM vector file into a vector format that I can read with WORD 7. I am dealing with a graph generated using BSTAT. The quality of the BMP file is too poor for publication. In theory the vector format should take care of this problem if I can get it into some type of metafile format such as CGM or WPM.

Thanks

Alyre Chiasson
chiassa@umoncton.ca

1057. German "Maus" Atari groups for everyone!

Newsgroup: comp.sys.atari.st

As promised in a previous posting- here are the URLs to the various Atari
ST related newsgroups from the German Maus network.
Unfortunately you won't be able to send any messages to these groups this
way (to my knowledge that is).
Well, here they are. Enjoy.

Hallvard

From: rich@rjelwell.demon.co.uk
Message-ID: <845514562_OASIS_NEWS@rjelwell.demon.co.uk>
Source record: 135688

In article <54251d$3o8@scanner.worldgate.com>
Chris Krowchuk <chris@compdirect.com> wrote:-

>I understand Richard. We have gone through these pains here in our shop
>and have isolated the problem to be the cable. By replacing the cable
>with a higher grade cable, all problems went away.

I am prepared to believe that a better cable improves reliability
but this is to do with HDDriver v6 doing funny things with the 040
chip on my, and others, Afterburner. If I bootsector boot AHDI then
auto-folder boot HDDv6 after the AB patches it is fine. No currupt
files etc.
Uwe Seimet, the author of HDD, is baffled by this.

[Snipped]
>Trust me! Try it, it works!

Trust me the people currently discussing this on the new Falcon040
mailing list may argue that point.

Rich.

>So, what is your view on Apex?

It should use GEM.

>I assume from your post that you are against this progam? Have you seen the
>speed of it? This is not possible in a gem environment. The speed of the

I have seen the speed of it. With GEM, all the processing etc. would be
the same speed. In fact, since it has no windows (and as such would be all
in one window under GEM) I find it hard to see _anything_ that would be
slower.

>window redraws in Apex alpha (apex 3) running in true-colour mode were much
>better than a Falcon in 16/256 colour mode. They were so smooth that they
>scared Craig Graham into spending more time optimising XaAES (which is
>already faster than AES 4.0) window routines...

I have not seen Apex 3. But under GEM, windows are redrawn by the software -
by Apex in this case. So Apex could still redraw the windows as fast as it
wanted to.

It is quite likely that the user interface would end up a little slower under
GEM - because GEM is so much more advanced, it is understandable that it would
be slower. There is much more to be done, for example another window might
be on top of Apex's window, then it has to redraw it in two bits.

>Yes, GEM does make the environment more consistant, and multi-tasking
>easier.
>
>No, GEM is not right for all programs.

No it is not right for all programs. But it is right for virtually all
application software. I believe Apex would be greatly improved if, for example:

* I could just drag a file onto the apex window to load it

* I could let Apex anti-alias an animation in the background while I get on
with something else

* My download would not stop when I start Apex

* I could have easy access to the desktop while using Apex (rather than having to "task switch" from Apex to get to the desktop)

* If apex had a standard user interface (which it would with GEM)

* And so on.

All this can be done with GEM better than any other way.

Actually, this is what the Yolo Atari Club has been trying to do with
their International TOS Software Catalog. But it is a big chore. Take a
look at what is there and send updates and maybe it will improve.

You can see the lists at http://virtual-markets.net/vme/yac/
then follow the International TOS Software Catalog link.

This message from fvk@cs.vu.nl to All came in on a wing and a prayer...

Hi Florentijn!

f> I recently obtained a SCSI tape drive, and would love to connect
f> it to my Mega STe. I have an external HD drive with ICD host adapter.
f> Is it possible to use that adapter to drive the tape unit? Or my
Probably best to use your external drive/adaptor, you could put a 50W
Centronics socket on the back of the case if there isn't room to mount the
streamer inside.

f> internal adapter? I have seen some tape related stuff on the Net...
It won't be of much use as on-line storage because it's serial not random
access. For archiving you should look out for Gemar, V2.21 seems the best
(IMHO).

Speak to 'ya later!

>> time.
>> Perhaps your jpeg.ovl is corrupt or something?
>> (I use MiNTNet rather than STiK if that makes any difference).
c> Yes, it makes a difference, the symptoms all point to CAB.OVL

I downloaded two picture files with CAB the other day, one came through
OK and one stopped just before the end. The thing that struck me was that
the file that failed had a long filename whereas the other one conformed
to the 8:3 name format. I have pictures disabled so I assume Jpeg.Ovl
wasn't called at all.
Coincidence? or has anyone else noticed this?

1069. Papyrus GOLD 4 questions

Newsgroup: comp.sys.atari.st
Date: 1996-10-17 00:00:00 UTC
From: mbecroft@tos.ak.planet.gen.nz
Message-ID: <GJRTBCUQUp@tos.ak.planet.gen.nz>
Source record: 135699

I have just obtained the Papyrus GOLD 4 demo from HiSoft's WWW page.

It seems very good, but there are some points which could be a big problem.

However, many of these might be caused by my ignorance of how to operate Papyrus (the demo version has no manual or online help).

So maybe someone who has the full version of Papyrus can suggest some answers.

* Pictures draw _very_ slowly. Once they are drawn it is fine, but the first time is very slow. And this "first time" slowness occurs each time the zoom is changed. Can it be speeded up?

* Vector graphics from Kandinsky in GEM format come out wrong - the colours all become black when imported into Papyrus. Can this problem be avoided?

* I have a system font slightly smaller than the normal 8x16, and so the icons in Papyrus are scaled. This is fine, except that each time a new document is made, the icons are scaled again! This means that every time I make a new document, all the icons in the toolbar get smaller, until after a couple of documents are open they can hardly be seen at all! This is obviously a bug, but is there some kind of workaround?

* Objects cannot be grouped - or can they? How is it done?

* Can text be piped from one text frame to another (for multi-columns)?

* Can multiple columns automatically be set up?

* Are guidelines possible, and can frames be snapped to guidelines?

Any other things that are worth knowing about Papyrus?

If you want to use MiNT, I'd recommend N.AES instead of MTOS. N.AES is
fast, slick and stable. MagiC is slightly faster and twice as expencive.

> Oh!! by the way... does anyone know about a browser for the Falcon with PPP conection? There is only one
> server with SLIP conection by my area, but it is quite expensive!

Install the KGMD-kit and run N.AES on top. Run GlueSTiK, and you can use
STiK-applications with MiNTnet. MiNTnet supports SLIP, CSLIP, PPP, PLIP,
ethernet... You'll need a lot of RAM though, my setup leaves me with 10Mb
free on my 14Mb Falcon, so if you have only 4Mb it'll be a bit tight...

Source record: 135705

MagiC (4 or 5) is a lot better than MinT. It's fast and very flexible.
It can be a little unstable though nowhere near as bad as MinT. It
doesn't have full AES 4 support though.

Geneva is also worth a look. Although slower than MagiC, it is a lot
faster than MultiTOS and much more stable than both. It also includes
full AES 4 support and allows you to incorporate MinT for pre-emptive
multitasking (it's cooperative without it).

Martyn Tidd

Does anybody really multitask with Atari?? I mean I have mint and Multitos, but I can't work with it longer
than ten minutes!! Most of the applications don't work and I always end up reseting my Falcon... Is there
a version wich REALLY works?? What do ya all know about Magic?...
Oh!! by the way... does anyone know about a browser for the Falcon with PPP conection? There is only one
server with SLIP conection by my area, but it is quite expensive!

This problem annoys me somewhat as well. Can you tell me _how_ to convert
them? Better still, is there a program on the Atari to do the job (no, I
thought not), or at least one that will run under DOS or WIN 3.11 on my
Falcon Speed.

Cheers,

Xav

Message-ID: <32662D3C.167EB0E7@etlxdmx.ericsson.se>
Source record: 135707

I too found this problem. My guess is that, as an OS replacement, MagiC does some things differently to TOS and therefore SAM doesn't recognise them as the same events and so doesn't react correctly. I stand to be corrected though.

Where can you get one now. Both Titan and Overscan are out of stock
at this moment. (Should change soon however).
How does your NOVA card work with Apex Media? (current version).
Are your debuggers working ok?

Just trying to point out that the cards are different :).

>
> I don't care as the Hawk will never come out anyway and I doubt

The Afterburner is nothing more than a Mighty Sonic with an
040 mounted on it and a few other changes. It still has
to use the 16bit bus for processing. It is NICE, however.

>
> Maybe you know something that nobody else know?
>
> BTW. I was told that the Barracuda is released... ;-)
>
> //Magnus Kollberg

Boy arn't we cockey now we have an Afterburner :)

Ya, I got to hold a Hawk a few months ago. It does exist.
It is quite different than the Afterburner or Barracuda.
Remember, Overscan had to get GeSoft to finish the Afterburner
otherwise it may have never made it out.

The Hawk, "if it makes it" is more like a 32bit Falcon on a
seperate card. Those nasty old Pals that give all the accelerators
problems are removed from the Falcon board. The Hawk does it own
thing.

If you have Atari Portfolio, or if you know somebody who
has got it, or if you are just interested in this palmtop,
there is an important information for you:

The support activities by Czech user group have been moved
to a new WWW location at http://www.port-home.com

The support includes both software and hardware, and also
repairs and upgrades. They have a solution when your
LCD flat cable dies.

My MiNT-setup (N.AES 1.1, FreeMiNT 1.14, MiNTnet, MinixFS...) is just as stable as MagiC 4. I believe you're refering to MultiTOS when you're talking about MiNT.

> Geneva is also worth a look. Although slower than MagiC, it is a lot
> faster than MultiTOS and much more stable than both. It also includes

Geneva is nice. I tried the demoversion and liked it a lot, but since Compo went broke before they sent me Geneva (They took my money though...) I've never had a chance to try "the real thing".

> full AES 4 support and allows you to incorporate MinT for pre-emptive
> multitasking (it's cooperative without it).

I could never get the demo-version to work with MiNT, even on a very basic setup (MiNT only...).

From: bkozlowski@nordnet.fr
Message-ID: <845739418_OASIS_@nordnet.fr>
Source record: 135513

In article <544p81$rj@dinkel.civ.utwente.nl>
v.e.bakker@getronics.nl (Vincent Bakker) said:-

>What is a good JPG viewer for the F30? In color please...

My prefered is JPEGVIEW 2.22, also known as JDSPV222.PRG by
D.R.Oldcorn & Volume 11 software.

Very fast, usable to see only one image, a folder slideshow, or if
called without parameters has an interface (like VPIC on PCs) to select
images for a programmed slideshow. Knows JPGs and GIFs (but for GIFs there
are better and faster viewers). The only problem is that like many other
resolution switching programs it don't like NVDI: it works, but sometimes
you come back to an entirely black desktop...

Bye! Bruno.

>True enough.

The moral force of an argument quickly disspates when false
analogies need to be made to support it. This appears to
indicate a certain lack of confidence regarding the moral
issues regarding what's actually going on. If anyone else would
agree with your position they should still be able to do
so even if you don't add elements to the 'crime' that aren't
already there. Doing so only makes you look like a liar and
not much better than the thieves you criticise.

You change who is being victimized and how. This makes your
analogy a dishonest joke.

>
>Let's put it another way - someone, somewhere, has to buy at least one copy to
>crack it and distribute it. I can't see any reason why /I/ should pay for

Actually, this is not the case.

Morality that requires dishonesty isn't much of a morality either...

I'm using the ICD Link drivers - no problem using that same drive with the
AdSCSI+ where it usually lives. Since I partitioned the drive with ICD utils,
and I have 10 partitions, my suspicion is that the partition size was the
reason I only saw C: through F: using the Atari host.

Ahh, ok. I get it. Well I can ask the Black Scorpion team if they've
thought about making a special PPC-MagiCMac version of the new APEX program.

But the newer versions of APEX Media and also the new forthcoming APEX Alpha,
runs fine on 68040-Falcon's. But they still uses the DSP.

> There
> seems to be a much larger market for a product which runs under
> MagiCMac(and PC),

It depends on what it is. But I partly agree.

> the problem is that there is no decent animation or
> retouching software.

For PC and MAC - really ?!??

> Apex could realy scream under MagiCMac (you should
> see RayStart!!!)!

I could imagine. I have a Mac LC-630 with a 68lc040 CPU running MagicMac,
it's quite nice.
But a Falcon040-AfterBurner is faster than the LC-630 Mac, it really
screams :-) I guess I'm going to buy an AfterBurner soon.

VB> Can Cubase play 8-track audio from CD-Rom? Like, when I backup
VB> a finished song and AIF files on a CD, I can play it back from
VB> CD-Rom, or do I have to copy it back to the HD first?

Hi Vincent,
I doubt that you could replay 8 tracks from the CD, since it has a much slower seek rate than a HD, as well as a much slower data transfer rate. You need about 1.3MB/s transfer and faster than about 13ms seek rate to be able to use it fully.

VB> I mean, this seems to work with a ZIP drive.... (so I have
VB> heard)

The Zip can replay up to 6 tracks simultaneously at 48kHz, but someone told me it would play 8 tracks at 44.1kHz (haven't had the time to test that yet). The Jaz (1GB) i even better, since it's faster than the Zip and therefore should be able to play all 8 tracks.

Best regards,

Claes

I simply don't believe that the Barracuda really IS available, since I've sent faxes to Wizztronics asking about it (from the computer store where I work). I've asked about prices, compatibility and availability. Since they haven't even bothered to answer me, even though I try contacting them as a retailer, the most obvious conclution is that they don't have it ready for delivery. If they really have it - they should be interested in selling cards to a retailer here in Sweden, so they can expand their market...
But still no answer at all!

Could someone provide me with an e-mail address to Wizztronics?

Best regards,

Claes

I have MultiTOS and MintNet running on a 4 MByte STe with a Sang Megavision video card. I'd run CAB for MintNet personally. Anyway, the setup is pretty stable, unless I really start stretching my memory (e.g. running CAB, MultiTOS/MiNT, and an editor kinda kills my system in 256 color mode. Without the editor running, though, I can browse for quite a while.).

>Does anyone know where I can ftp a C++ compiler for the ST?

Just about any major ftp site should have GNU C++.
Look under a 'languages' directory for a filed named g++... or similar.
You'll need libraries and include files as well, which should be somewhere
near.

>If it makes any difference, I am on an 1040STf TOS 1.0 1MEG ram...

That certainly makes a difference.
There's no way you can run a C++ compiler on that, unfortunately.

G++ is the only one available for the Atari machines, and the executable
itself is well over 1 Mbyte. A hard drive and 4 Mbyte RAM is needed to do
any useful work with it and it's definitely not fast on an ST.

>atari software. I found a C compiler, but the thing is... even with all
>these FTP sites I have, I still need to know the name of the program.
>Either that, or I can ftp and uncompress all day...

There are almost always index files that let you know what the files in a
directory really are. I'd suggest reading that before downloading.

Vincent Bakker <v.e.bakker@getronics.nl> wrote:
>What is a good JPG viewer for the F30? In color please...

That really depends on what you want it to do.

First, the APEX viewers are fast and will show the files in TC mode, shrunk
to fit on screen. There's even a pseudo-24 bit mode IIRC.
I believe the viewers are FreeWare and they should be available on most ftp
sites.

There are also a whole bunch of programs that use the JPEGD DSP JPEG loader
if installed, such as Speed of Light, GEMView and MGIFv5.1.
With JPEGD those are also very quick, but they don't change graphics mode,
which might be good or bad depending on your point of view.
The first two are ShareWare and available just about everywhere.
MGIFv5.1 is FreeWare and since it's still, technically, a beta version it's
only available directly from my WWW/ftp site (v5.0 can be found in lots of
places, but that can't use JPEGD).

GEMView displays images in windows, which the other two don't, but MGIF
and to some degree Speed of Light have lots of image processing functions
that can do weird and wonderful things with your images.
I don't think Speed of Light handles TC mode, but I might be wrong.
Since all three of these programs do a lot more than show JPEGs, they are
a _lot_ larger than specialized viewers, naturally.

I'd suggest you try a few programs and see what you like.

You've got a point there.

>How does your NOVA card work with Apex Media? (current version).

That can hardly be blamed on the NOVA or AB040.
The NOVA card wouldn't be better off with a Hawk.

>Are your debuggers working ok?

Well, there _is_ one that does, thank God!

>The Afterburner is nothing more than a Mighty Sonic with an
>040 mounted on it and a few other changes. It still has

I've never seen a Mighty Sonic, but I can't see how the boards could be
very close. I mean, the '030 and '040 bus interfaces are not that similar.

>to use the 16bit bus for processing. It is NICE, however.

Uhm, why would you have to use the 16 bit bus for processing?
The entire OS code and just about all programs run fine in the local 32 bit
burst access memory.

Naturally, you'll have to access the hardware via the 16 bit bus.
Do you mean the Hawk doesn't have to do that?

>Ya, I got to hold a Hawk a few months ago. It does exist.
>It is quite different than the Afterburner or Barracuda.
>Remember, Overscan had to get GeSoft to finish the Afterburner
>otherwise it may have never made it out.

I planned to buy a Barracuda for a long time, but sadly noone ever got the
developers to finish it...

>The Hawk, "if it makes it" is more like a 32bit Falcon on a

Does the Hawk really duplicate any of the hardware?
The AB040 also runs all by itself and uses the rest of the machine as a fancy IO card if you run your software from on board RAM.

I would have liked a faster SCSI interface, but the speed of the rest of it is quite fine with the AB040.
Accesses to the old RAM (for the screen mostly) are slower than before, but it isn't too bad. Monochrome mode is blazingly fast and my favourite 1008x608x16c mode feels a lot snappier than it used to.

>seperate card. Those nasty old Pals that give all the accelerators
>problems are removed from the Falcon board. The Hawk does it own
>thing.

What does it gain from that?
(Apart from the user not having to solder a whole bunch of wires onto those PALs.)

It would be interesting to do a speed comparison on some real software (not GEMBench, that is). Are there any figures available for the Hawk?

A 32 MHz '040 should beat a 50 MHz '030 easily on just about everything, even if the latter has an L2 cache.
Most common instructions are single cycle on the '040, while only the simplest ones are as fast as two cycles on an '030. I remember reading an article when the '040 was new that stated an average instruction time during program execution of around 1.3 clock cycles.
For floating point work, the '030 should be left in the dust, but GEMBench will probably not agree with that at all. ;-)

I have 11 partitions in addition the floppy drives, ahppily sitting on my
desktop. The Atari host adaptor is limited to SCSI IDs 0-3, but there's no
especial restriction on partitions - i think we established a while ago that
24 hard disk partitions (plus two floppies) were quite possible with the
right hard disk driver software.

> I suspect that up to about 1 gig, you would have no problems, but above
> that, you'll hit the "1 gig barrier" that AHDI exhibits. Apparently,
> Atari cut corners on the host adapter even more than I knew.

The 4 partition limit relates to an old version of AHDI only. Newer versions
of it don't suffer from it, nor do they suffer from being unable to read from
SCSI devices with non-consecutive ID numbers.

Isn't the limit on partition size now 1Gb with HDDriver etc? A 24Gb hard
drive is therefore practical to be fully utilised...

> my humble opinion....

Wow, I haven't peeked in this group for about 6 months now. As the
person who put together the TAF kit many eons ago I am sorry you
are having so much trouble installing it. The reason we put it out
at the time was that there was no real alternative to it. I had set
up X-windows on my TT so I could use it as an X-terminal while I was
doing my masters. That way I could run MATLAB on a supercomputer
at school and pretty much have the same view at home as I would in a
lab at school. I did not have much time at that point to put together
a foolproof install system but put something together that was
reasonably easy. The MAJOR problem is that unless you have some UNIX
background, Mint/X is not a system you can jump into. The other major
problem was that for proper file system support, it was absolutely
necessary to have a Minix parition which means MOST people would have
to wipe out one of their TOS paritions. This is a lot to ask for
installation. WIth the zillions of hard disk drivers out there it is
impossible to guarantee everything will come together smoothly for
everyone.

Unless you are willing to spend the time to get deep into MiNT and X
and how they work, I would not recommend installing the system at all.

I had 12 meg of RAM and that made for a good X-terminal. 4 megs won't be enough to do much. Now that CAB/STiK are available, I would suggest that route OR using Mint and MintNET with GEM and getting the MintNet cab.ovl. This will take a serious investment of time to figure out what's going on. As I said, the TAF distributiion was put together to fill a void at the time but now I would stik (sorry) to the more friendly options.

For any of you who are interested - I still have my TT (with the big-ass mono monitor I got in a surplus store for $50Canadian) although I rarely turn it on - I am too busy with my consulting business now. I have to write a lot of software for PC-based systems in what I do so I now rely on a P133 system BUT I have to say that I wouldn't be where I am today without growing up with Atari computers. I was programming my Atari 800 in machine language when I was 12 and setting up Mint and X gave me a real feel for Unix-type networking and system management. That fact that there was no one to hold your hand with and Atari was a very good thing. I learned so much about computers and how they operate (I still have the 8-bit technical reference notes which contain the complete OS source code) that I am leaps and bounds ahead of many PC programmers (for what I do) because I can incorporate machine level stuff (playing tricks with interrupts, or the PCs incredibly idiotic DMA system, etc) into programs. I generally do complete hardware and software solutions for automating experiments and have been able to many many real time (while multitasking) applications in Windows because of the ability to manipulate the hardware directly - this has brought me a lot of money and a lot of new work.

I guess the point I'm trying to make is that the problems you are running into could be a real benefit - if you take the time to learn and understand what's going on - you will learn something that is in big demand in the marketplace and you will understand it from the fundamentals! A lot of unix administrators out there now use graphical install and diagnostic tools and really have no idea about how the system works - this trend is growing and it will make people who have a DEEPER understanding of the systems that much more valuable in the marketplace in the years to come. Like I say, right now a complete hardware and software integration and invention capability are very valuable because there are less and less people who are being educated in both areas simultaneously. So, look at this problem as an opportunity...

Well, so much for way off the topic conversations...Take Care all!

Excuse me, I am interested in how you did this. I am looking for an easy (and cheap) solution to add more storage for an stf I am putting together for my dad. Did the ez135 plug directly into the acsi port on the stf? Would there be any problems putting ms-dos files on other partitions? This atf has the at-speed upgrade. I realize I should be asking the maker of the drive, but would like to get some real life answers. tks.............................j

1114. 68k mag author wants feedback...

Newsgroup: comp.sys.atari.st
Date: 1996-10-18 00:00:00 UTC
From: chriswil@southern.co.nz
Message-ID: <54734b$10l@orm.southern.co.nz>
Source record: 135569

Hi there!

I received an email from a guy recently who writes a magazine about 68k based applications. He is wondering if we Atari users would like to contribute to his magazine. What follows is the email he sent me...

############################## Start of email message ##############################

From: Frank Swygert <DSRTFOX@delphi.com>
Subject: Atari computers
To: chriswil@southern.co.nz

I publish a small 68K support magazine. I would like to start supporting the Atari machines as well. Current support is mainly for some 68K based hobby machines running the OS-9 operating system (a version was made for the Atari ST series by Cumana). I would also be willing to support or at least have articles on other UNIX like operating systems. I also like hardware articles, especially modifications and upgrades to existing machines. Many of my clientele started with the 6809 based Tandy Color Computer (many still use them, I still support it) and OS-9. These people have made MANY modifications to the little machines, and have expanded the capabilities greatly.

Is there any room for such a publication in the Atari community? Would you be interested in passing the word along and writing some artilces, maybe on MINT?

Francis (Frank) G. Swygert
Publisher, "the world of 68' micros" Magazine

################################ end of email message ################################

If you are interested (and why not, any Atari PR is good PR!), then email Frank, NOT me, at DSRTFOX@delphi.com to express your interest...

The EZ135 comes complete with cable. The easiest HD installation
I've ever done. I had mine up and running on my 2M 1040 STf TOS 1.00
in less than 10 minutes. And it's larger, faster, and cheaper than the
ZIP. The only downer I have is the partition size TOS 1 limits me to.
Oh well , with Terra I can make a neat border with the 9 drives. :^}

Hello!

For everyone that wants some kind of sparepart for his atari, here's a few pointers...

Stacy-stuff - Write to conny@copson.se
He's got a few things (amongst them powersupplys).
I even think he's got a webpage at http://www.copson.se/

ST/STE/MSTE/TT - mail me! I got pretty much everything in spareparts for ST and STE, and a few MSTE and TT stuff!

Schematics - got schematics and service manuals for almost all Ataris.

Cartridge! Oh yes. Diagnostic ST/MST, STE, MSTE and TT...

I don't mind swapping. Do you have any cool hardware or software, I'll consider a swap! Almost anything is interesting!

What I really would like: An ethernet card for my TT/F030... :)

Take care everybuddy!

// Tommy

1117. General: Summary of Atari situation.

Newsgroup: comp.sys.atari.st
Date: 1996-10-18 00:00:00 UTC
From: B.S.Senior@bradford.ac.uk
Message-ID: <547dek$2ja@columbia.acc.brad.ac.uk>
Source record: 135572

I appologise if this has been said recently, but I have been away
for a while.

Firstly:
I currently recieve about 100 postings a day from this group,
most of these get discarded without reading due to the numbers.
Has anyone thought of subdividing the group, into smaller sections. eg.
Software, Hardware and News/others.
I don't know how it works so dont know if this is practical, but IMHO i
think it would make it easier to find relevant postings.

Secondly:
Could someone write a review of the current Atari Situation, including
Magazines available, What companies still support/write software for the
machines, Any user groups in various areas of the world, what PD
libraries are around etc.
Or could someone direct me to a place where I might find this information.

Comments welcome.

Regards.

1118. TT 4 $ale

Newsgroup: comp.sys.atari.st
Date: 1996-10-18 00:00:00 UTC
From: dave.lee@to.org
Message-ID: <628_9610180525@to.org>
Source record: 135573

Since everybody locally has TT's for $ale in the $1000 plus range, I'll offer one that I have for $500 CDN plus shipping via whatever you want to pay for. (I suggest UPS Standard Delivery for North America).
It's a Rev: B motherboard, 4-Meg ST-RAM, no TT-RAM, no HDD, you can upgrade the TT-RAM and HDD at your convenience. I found that it's easier to use an outside the case HDD. You'll need a VGA monitor and the add-on board for the TT-RAM.
That's only $500 CDN plus shipping for a 4-Meg ST-RAM TT (a 32 mhz machine). Reply here or NetMail or to dave.lee@to.org. Cheers.

This is a Magic Shadow Archiver archive, it contains an image of a whole
disc (possibly in compressed form). You need MSA to put it back onto a floppy
disc.

Yup, that's right.

> How does your NOVA card work with Apex Media? (current version).

I have no NOVA, but Apex works fine with the NOVA as long as you doesn't
activate it. :-)

> Are your debuggers working ok?

With BSS Debug, yes.

> Just trying to point out that the cards are different :).

Sure, but I can't see where the NOVA has to do with it?
There were rumors that the Hawk would have a screen booster, but it didn't
work. With the AB040 you can use 720x528 in 16bit if I get the Nemesis, or
use the regular resolutions you can get with hardware like ScreenBlaster.

> > I don't care as the Hawk will never come out anyway and I doubt

> to use the 16bit bus for processing. It is NICE, however.

So how come that the Hawk doesn't have to ues the 16-bit bus?
Dose it have serial ports on the card? Does it have a video card?
Does it have a new DSP?

As most programs runs in Fast-RAM, they doesn't need to use the 16-bit bus,
they use the 32-bit 32MHz bus to it's local Fast-RAM, which is _fast_.

> > Maybe you know something that nobody else know?
> >
> > BTW. I was told that the Barracuda is released... ;-)
> >
> > //Magnus Kollberg
>
> Boy arn't we cockey now we have an Afterburner :)

We sure are, and why wouldn't we? :-)
It's fun and it works and there is still people who can't belive it.

> Ya, I got to hold a Hawk a few months ago. It does exist.

It depends on how you use the word "exist". The 040 Falcon from
Atari did also exist, atleast that is what some at Atari said, but
it never got released. Exist means nothing in this case and you
know it.

So what did it look like? When will it be released? This century? :-)
How much will it cost?

> It is quite different than the Afterburner or Barracuda.

So what is the difference? Tell us.

> Remember, Overscan had to get GeSoft to finish the Afterburner
> otherwise it may have never made it out.

So?

> The Hawk, "if it makes it" is more like a 32bit Falcon on a
> seperate card. Those nasty old Pals that give all the accelerators
> problems are removed from the Falcon board. The Hawk does it own
> thing.

But you will still need the old Falcon, just like with the AB040
and don't forget that the AB040 do exist as I know of many people
who has got one (me included) and use it every day without any
problems.

I can't see how the Hawk can differ much from the AB040, except that it
has got a overclocked 030 insteed of a 040.

All the software I have seen which uses face value has a non-standard
user interface which I find gets in the way. I would recommend using a library
like EGEM which is easy to use and still makes user-friendly software (IMHO).

Why not just make WebSpace use STiK? This way, it can be used with the two
current TCP/IP software - STiK and MiNTNet (via GlueSTiK).

It seems silly having a third one - there needs to be some kind of standard,
otherwise we will end up needing to dial in and out every time we wish to
use a different service!

Yea, I too assumed Oasis supported PAP as they have had PPP for a while,
but no, it doesn't support it....

The good news, is that MiNT-net does support PAP if you have a recent
version and an uptodate version of pppd. Get the PPP kit, as this should
have everything you need... :)

Hi All
I have problem with configure Duet (program for connect ST<->ST).
When i run it on MegaST (2mb Ram, no HDD) i can see on monitor
information : The Cookie Jar is'nt install.
What Cookie Jar I need install ?
What wrong I do?

Yes, try umich. there should be plans to add memory to several different models.

Sorry, I don't know which directory, try Misc.

There is a C++ compiler, part of the GNU package.

It's very big & needs at least 4 Megs of ram.

It won't work very well even on a four meg machine, you need lots of memory.

It should be on umich.

Source record: 135595

Hi Vincent and other interested parties,

msa is Magic Shadow Archiver. This is a program that allows you to compress an entire disk (i.e. sector for sector) into a file. It is often used for transmitting demos which usually have custom boot sectors. Of course the unscrupulous could also use it to transmit boot viruses, so be aware.

You will need the Magic Shadow Archiver program to create/uncompress msa files. This is available on umich and its mirrors in the Archivers subdirectory:
msa_141.lzh 30 Magic Shadow Archiver (full disk archiver)
msa_2_3+.prg 28 New MSA program version 2.3+

Cheers,

Michael

If you haven't noticed I've authored and maintained the "official" Atari ST FTP site list for a couple of years now. It can be found at the adress in my signature and updates are posted every month.

As for finding the compiler... I'm not sure I can help you there other than to say that you might try one of my FTP search tools, but I guess that won't help if you don't know any file-name(s)... :-(
I hope someone else here will be able to help you.

: Sorry to jump in in the middle of a conversation, but I tested out several
: Zoom modems when they first came out in '91 or so. Comparing them with a
: UDS modem, the Zoom modems performed like total crap. Dropping connections
: for no reasons. Unable to a decent through-put. They were basically
: unusable for the remote network access we needed them for.

The Zoom I'm using, a regular external 33.6, has not given me any problems at all, not even dropping the connection for no reason. When I had a Maxtech (since returned to store) and an Infotel (blown by lightning), I couldn't keep the connections, just kept dropping them for no reason. The USR, Motorola, and Cardinals all kept the connections. I've seen a solid 28.8 connection, and that was when I forced the Zoom to make one, via the AT+MS command, AT+MS=11,1,26400,33600. That forces it to connect at 26.4 and faster. Now if I can make one to my ISP...

: Maybe they've improved since then, but I'm not giving them a second
: chance...

It seems they have. May I suggest you try giving them a second chance? I'd give USR a second chance, once they repair all the modems that have this troublesome pause that I've seen. See my previous message about that.

1148. power to my STf

Newsgroup: comp.sys.atari.st
Date: 1996-10-18 00:00:00 UTC
From: Ken Macdonald <macdonald@cfcsc.dnd.ca>
Message-ID: <3267F4C3.6770@cfcsc.dnd.ca>
Source record: 135603
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Hello

Something strange has been happenning to mt STf.
Once and a while, the the main power
light(green light in bottom left corner)will come
on, but the floppy drive light (yellow light in top
right corner of keyboard) will not, and my STf
will not boot. Or rather it flickers briefly (I can
hear/feel the drive _begin_ to engage) and then
goes out. Other times (more and more rarely I'm
afraid) the floppy light comes on no problem, and
the STf boots.
The wirinf appears to be OK.
Does anyone have any ideas as to what may be
wrong??
thanks for any help/info.

Do never use MultiTOS ! If you need multitasking GEM with MiNT, use NAES
or XaAES. These are efficient and lack the bugs MultiTOS has.

> a version wich REALLY works?? What do ya all know about Magic?...

What do I know about MagiC ? I use it, and write programs for it. Try it,
the name says all : it's simply magic. The most efficient and bug-free OS
for Ataris. You'll love multitasking.

> Oh!! by the way... does anyone know about a browser for the Falcon with PPP conection? There is only one
> server with SLIP conection by my area, but it is quite expensive!

You can use all CAB, Chimera and Lynx under MiNT/MiNTnet. If you install
Linux 68k on your Falcon you can even use Mosaic. There might even be a
Netscape version for Linux 68k.

Cheers Peter

I have a EZ-135 which I've tried on my TT and also on my clone.. I
usually use it to back stuff off my clone. It works great, Very Quiet
drive. To plug it into a ST, you'd need a Link I or Link II or
perhaps the Adscsi host adaptor will support it. I used it also on my
Mega ST with a ICD Link 1 and it works great, but normally use my
older Syquest 44 meg drives on the Mega for backups, storage.

Media is much cheaper on the Syquest 135 at about 20 per cartrdige
verses about $35 or higher for the older/slower 44 meg cartridges.
Still alot faster than backing up half a gig on 720K floppiies
though..
E-mail if you have any further questions.. Mike

It wasn't meant as an analogy.

> indicate a certain lack of confidence regarding the moral
> issues regarding what's actually going on. If anyone else would

Hardly.

> agree with your position they should still be able to do
> so even if you don't add elements to the 'crime' that aren't
> already there. Doing so only makes you look like a liar and
> not much better than the thieves you criticise.

Really. So, if I make my living selling sofas; there are only a few people in the world making sofas, and all sofas are pretty much the same; now you come along with some magical device that duplicates sofas. Would you argue that it is morally and ethically correct to get a sofa that I made (no matter what the means of obtaining that sofa), and give away the duplicates?

Assume that your argument follows the above lines, and that I (and the other sofa makers) then decide that we will no longer make sofas. Now Mary comes along and wants a sofa that doesn't have that little wobble in it, or has space to seat 5 instead of 3. Everybody stopped making sofas, so that leaves Mary with two options: suck it up, or learn to make her own sofa.

> You change who is being victimized and how. This makes your
> analogy a dishonest joke.

I changed nothing. Software authors are vicitimized by piracy; furniture owners are vicitimized by burglary. If you went down to Barnes and Noble, bought a book and took it home and scanned it, then posted it on the Internet, would you then claim that the book's author and publisher (not to mention Barnes and Noble and the other booksellers) were not being victimized?

Copyright law exists to encourage creative people to continue creating. If they get no reward for doing so, why should they bother?

>>Let's put it another way - someone, somewhere, has to buy at least one copy

Well, I'm going to jump in here and add my 2 cents about Software Piracy.
First, I want to say that I have great respect for computer programmers
and the software they create. But look at what happened to the Atari
8-bits when Atari passed the death sentence on them. Most all major
software companys one by one stopped supporting them. Which left the
8-bitters with little software to buy legally. After a few years passed
alot of 8-bit software could no longer be bought anywhere NEW. Most
placed adds for used titles. But when they were gone. 8-bitters had no
other choice than to get copies of software if they wanted to continue to
get programs that they didn't have. Today its is next to impossible to
find alot of the good 8-bit software that was created, without getting
a so called pirated copy.
That doesn't mean that I support Piracy. Because I don't! If the software
is old, cannot be bought New or Used and the programmer doesn't support it.
Than I can't see any harm to obtain a copy. Which in my view helps keep
a user using that machine more. I think that a programmer or software
company should release a program that can't be bought New or Used, to
the public. Or at least give the right to a few people to copy it for
resale at a low price, inwhich the programmmer or Software company will
receive part of the sale of the copied software.
Now if the software can be bought New or Used, than I do think its wrong
to copy it for other people. Right now the ST-Falcon needs all the
programmers we can get. And copying software that can be bought will only
damage future software releases for these machines. I for one want new
software for the ST-Falcon computers.

>Tell me- does the Atari faceplate/eject button fit the Teac 235?

It's been a few years since I did the upgrade. I did notice that the Teac's faceplate could be removed and probably would work with the faceplace of the Mega Ste. The Teac drive had dip switches and I set them exactly like the ones on the 720k Teac that I removed from my external drive B. The Epson drives did not have dip switches if I remember correctly. Anyway, both the Mega Ste's internal Epson high-density and external Teac high density drive b work great.

Hi,

Here's some Atari ST stuff that I'm not using
anymore. Those are my asking prices. I'm open to offers.
Buyer pays shipping. E-Mail me or call me at
216-729-0761 evenings EST.
I am also open to trade offers. E-mail me your list.

HARDWARE

Atari SF354 SS External Floppy Drive. Comes with power supply and
cable to connect to ST. Unit is in perfect working condidtion
but a little loud. Packed in original box. $15.00

Spectre GCR by Gadgets by Small. This is the Apple Macintosh emulator
for the Atari ST/STe/TT/Falcon computers. Includes cartridge, disks,
box, and an extra disk of misc ST utils. $65.00

TOS 1.0 ROMS. This is the original TOS on 6 chips. $5.00
---
520 ST external power supply. $10.00

Translator ONE by Data Pacific, Inc. This is a hardware box that
connects to the ST to allow the ST to read MAC and IBM floppies directly.
This is a hardware only device, just plug it in and forget about it.
This came out before Specre CGR for the software only MAC emulator for
the ST. $25.00

TT030 CPU. Unit has a dead motherboard. TOS 3.01, 720k floppy.
No keyboard. Has 2 Meg ST RAM that is unsoldered. Nothing has been
scavenged except the keyboard and power cord. *Make Offer*

GAMES

Imperium Game manual and registration card from Electronic Arts.
I no longer have the disks or box but for someone who needs
the docs here you go. $1.00

Conquest of Camelot by Sierra. Complete with box, docs, and disks $10.00

GEM'X by KAIKO. Complete with box, docs, and disks. $10.00

Gold Rush by Sierra. Complete with box, docs, and disks $10.00

License to Kill by Domark. Complete with box, docs, and disks. $10.00

Omega by Origin. Complete with box, docs, and disks $10.00

S.D.I. by Mindscape. Complete with box, docs, and disks. $10.00

Wayne Gretzky Hockey by Bechesda Software. Complete with
box, docs, and disks $10.00

Crystal Castles by Atari. Disk only $5.00

BOOKS

Compute's Technical Reference Guide to Atari ST TOS Vol 3.
Includes fully commented C and machine language examples. $5.00

PageStream 2 Manuals $5.00

MAGAZINES

I have a large selection of mostly 80's and early 90's Video Game and
Computer Magazines, Books, and Newsletters for various systems.
Please E-mail me for a current listing.

m> When i run it on MegaST (2mb Ram, no HDD) i can see on monitor
m> information : The Cookie Jar is'nt install.
m> What Cookie Jar I need install ?

You must have an old TOS which did not install a cookie jar at start up.

You could change your TOS chips or start using MagiC..... OR....

find the small (<1Kb) AUTO program which will install a cookie jar. The are
quite a few of these around. Search in some file base for "cookie".

m> What wrong I do?

Nothing! You just have an old TOS.

The best thing seems to be to use the PC for Internet/BBS and then transfer
to the ST using Ghostlink or, if you are a masochist, 720k floppies
pre-formatted on the PC.

I have used JDSPV222.PRG extensively and have also found the problem
with NVDI. The cure is to switch down to a 4 colour desktop, or
don't load NVDI.
Other than that it is the best JPG viewer I have used. Using it with
the Falcon in RGB it will use resolutions up to 768x600, which is
bigger than most televisions can fit on screen.

Rich.

1167. NEW 19" Monochrome TT Monitors $299 (US)

Newsgroup: comp.sys.atari.st
Date: 1996-10-19 00:00:00 UTC
From: sft@sound.net
Message-ID: <5487nr$ogk@guitar.sound.net>
Source record: 135537

Systems For Tomorrow - Protar Monitor Deal!!!
~~~~~~
Systems For Tomorrow has obtained a limited quantity of BRAND NEW 19" Monochome TT Monitors! These Protar ProScreen TT monitors are now available at the amazing low price of only $299 (US$)!

These monitors come ready to connect to the TT030 computer system - No graphics card is required! After being connected to the TT Monitor port, these marvels provide a Rock Solid 1280x960 paper white display that we believe is superior to Atari's own 19" monochrome.

Some of the specifications include:
19" Paper White Display
Front mount Power Switch
Front mount brightness control
Front mount contrast control
71.62 Hz Refresh Rate
1280x960 pixel resolution
90 day SFT Warranty

Shipping:
Actual shipping charges will be added to your total. Shipping currently ranges from $42 to $65 for shipment within United States (except AK & HI), and $70 to $90 for Canada. All monitors are shipped via UPS. Worldwide shipping is available, however it is quite expensive. Please E-Mail for specific rates.

Warranty terms and stuff:
The monitors come with a 90 day SFT Warranty against factory defects. With an optional one year warranty available for an additional $49. Warranty coverage includes parts, labor and return shipping in the United States (except AK & HI). Repairs are made at our discretion, and we are not responsible for acts of God, rouge children, refreshing carbonated beverages, ect. Warranty is only valid in North America. We are thoroughly testing all monitors before they are shipped to prevent costly return shipping.

>> better than a Falcon in 16/256 colour mode. They were so smooth that they

>I wonder how mr Little does it?

Gotta confess, Doug has made a seriously good job of Apex 3 - it's
window system is blindingly fast. The real-time window drags in TC
mode at the same time as a keeping a live video window in the
background are a lesson to us all...

>> scared Craig Graham into spending more time optimising XaAES (which is
>> already faster than AES 4.0) window routines...

I never said I was scared ;)
I just don't want people to laugh at me when I eventually get it
reasonably finished...

>Well, I wouldn't mind if XaAES got as fast as Apex 3 in truecolour.

You and me both - very little chance without a re-write into ASM and
ditching support for all the video modes (XaAES b6 should run in any
rez, on any machine - even with funky graphics cards).

>Wouldn't it be possible to do a VDI based on something like Doug has done
>for Apex 3? Could be cool. :-))

TC mode is great for efficient gfx routines as there's no bitplanes to
mess about with. I really think Atari messed up when they made 256
mode bitplaned instead of the more obvious byte per pixel (which
would have made the 256 colour performance loads better). But I cann't
just support f030 TC mode to the exclusion of everything else - enough
people sulk over my habit of neglecting the lower ST modes....(which
actually work ok now).

Craig.

Message-ID: <845807700_OASIS_@goldings.demon.co.uk>
Source record: 135546

I have never seen any instructions on how to use the Server/Proxy menu item in CAB. So far I have always set the www-cache server and port in the STik Default.cfg file. Its obvious where to put the server name in the dialog but where does the port number go?

Would someone please point me me in the direction of any documentation if it exists,

Phil

Yeah, I experienced the same thing :-(
I guess you must have confused the UNIX way of separating paths (/) with
the MSDOS/TOS (\) way. Use the UNIX styled / when working with web pages.

1180. Stacey Selling as Parts!

Newsgroup: comp.sys.atari.st
Date: 1996-10-19 00:00:00 UTC
From: bensmith@teleport.com
Message-ID: <54acme$opb@nadine.teleport.com>
Source record: 135550
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech,abg.atari

I have an Atari Stacey I'm selling for Parts, to be sold for parts. Not to be repaired. If you wan't to try to buy it to try to repair it? I'd advise against it. It is one of the first ones off the Assembly Line, without batteries. It's Switching Power Supply has been tested & works fine. The Stacey Switching Power Supply can Run in the U.S. or Europe on 110 or 220 Volt. These Power Supplies Regularly sell for $100 U.S. The Stacey without the Power Supply goes for $175 U.S. Dollars. Stacey with Power Supply goes for $250 U.S. The Power Supply won't be available for sale until after the Stacey is sold. Unless, of course, It's sold with the Stacey. It's a 4 MB Stacey with Hard Drive. Please direct all Replies Through E-Mail to: bensmith@teleport.com or call Ben at (503)256-9974.

very cool site -- I honestly thought I was the only person left who even
remembers AR.

I own a Falcon and The City doesn't work on it at all. I have often thought
that it would be very cool to start writing the game all over again...

I have a working graphics engine for the Falcon that works in truecolour, but
it wouldn't take all that much to get one working for any atari in low res.

If anyone is interested _please_ mail me -- I now longer have AR but have
played both the city and the dungeon (to completion >:) so I couldn't possibly
do the whole thing on my own.

Is Philip Price still around, incidentally? What's he doing these days?

Cheers,

James Cox

1182. Cab 1.14e problems

Newsgroup: comp.sys.atari.st
Date: 1996-10-19 00:00:00 UTC
From: tparrett@parrett.fast.co.za
Message-ID: <845824790_OASIS_@parrett.fast.co.za>
Source record: 135552

I'm a new user of the Stik/Cab combination. I have been using OASIS for quite some time but got fed up waiting for SPIDER to appear or for Stik to support ppp. I have just changed my connection to slip so am at last able to try out the www.
I have got up and running but not very reliably and have two questions in connection with this:
1. What are the primary causes of the 'Runtime error' message of which I have seen more than a few !!

2. I have set up a CACHE folder as indicated in the Cab docs but the prg also seems to require further folders inside that called 'A' through to 'Z'. If I set these up i seem to get somewhere but the docs are silent on this.

All help appreciated

1183. European Demos / Syntax Terror / Ooh Crikey Wot a Scorcher!!

Newsgroup: comp.sys.atari.st
Date: 1996-10-19 00:00:00 UTC
From: cronos@worldaccess.nl
Message-ID: <N.101996.175907.98@wxs6-2.worldaccess.nl>
Source record: 135553

Hi...

In the previous message was a list of Atari software that I am putting up for sale at interesting prices. The list also includes signed copies (all participating demo coding members) of the Overlanders' "European Demos", Delta Force's "Syntax Terror" and The Lost Boys' "Ooh Crikey Wot A Scorcher". Even if you are no longer keen on acquiring Atari stuff, you might still want to check these out for nostalgic value. Check out the "THIRD CATEGORY" in the "pot of stuff at the end of the rainbow" message.

Cheers...

1184. A pot of stuff at the end of the Rainbow (INTERESTING MESSAGE!!

Newsgroup: comp.sys.atari.st
Date: 1996-10-19 00:00:00 UTC
From: cronos@worldaccess.nl
Message-ID: <N.101996.175858.53@wxs6-2.worldaccess.nl>
Source record: 135554

Right. I have switched to the PC and will only be retaining various titles
from my Atari software collection insofar as they work on the GEMulator.
Financial reasons have kind of forced me to sell the Falcon, so I will
basically be selling stuff that only works on the Falcon. Ever since I got the
Falcon and sold my MEGA ST, I've been having a lot of ST-specific titles
(games) sitting around that I will also put up for sale here.
Specs follow below. ALL THESE TITLES ARE ORIGINALS, PRE-PROD COPIES, OR
EVALUATION COPIES. NO PIRATE COPIES. Swap offers not welcome.

FIRST CATEGORY: GAMES FOR ST, WITHOUT MANUAL, WITHOUT BOX

Airball
Airball Construction Kit
Arena (2 disks, Psygnosis)
Arkanoid (Imagine/Ocean)
Backlash (Paul Woakes, Novagen)
Barbarian (2 disks, Psygnosis)
Black Lamp (Firebird)
Blood Money (2 disks, Psygnosis, bloody excellent game)
Brattacas (Psygnosis, classic hi/med res game)
Bubble Bobble (disk will handled, was my absolute fave game)
Chaos Engine (2 disks, disks patched for use on Falcon, can't press any keys
until the game starts or it won't work; don't know if it still works on the ST)
Deep Space (2 disks, Psygnosis)
Defender II (ARC/Atari, by Jeff Minter, classic game, but difficult to play)
Dragonflight (Thalion, 2 disks, double-sided drive required)
Dungeon Master
Enchanted Land (Thalion)
Extensor 3.3 (Tron-like game, monochrome only, by Golden Games, ancient)
Gods (superb game, two disks, by Bitmap Brothers)
Goldrunner II (boot/game disk plus data disk, by Microdeal)
Goldrunner II Pete Lyon data disk
Goldrunner II some other guy official data disk
Gridrunner by Llamasoft, excellent game by Jeff Minter
Hitchhiker's Guide to the Galaxy, the original Infocom adventure (alas, no
gadgets anymore, I lost 'em all)
Jambala, the Seven Gates of (Thalion, DS disk version)
James Pond (by Steve Bak, Millenium Software, preview copy, but is a full one)
Jupiter Probe (legendary Steve Bak shoot-em-'up with Rob Hubbard Music)
The Killing Game Show (Psygnosis, 2 disks)
Leatherneck (Microdeal shoot-em-up, really cool, have to disconnect printer to
get it to work, does not work on Falcon, alas)
Lemmings (need I say more?)

Oh No! More Lemmings
Lemmings 2
Lethal XCess (absolutely great shoot-em-up from the author of Wings of Death, by Eclipse, 2 disks)
Little Computer People (Activision, really cute game)
Magic Pockets (great Bitmap Brothers game, one disk)
Monster Business (platform game, Eclipse design)
Nebulus (John Phillips excellent game)
Obliterator (2 disks, Psygnosis)
Photon Storm (hellishly difficult Jeff Minter game)
Prehistoric Tale (Thalion game, coded by The Lost Boys, platform thing)
Return to Genesis (the first true horizontal smooth scrolling shoot-em-up by Steve Bak, excellent graphics, great game)
Revenge of the Mutant Camels, registered version for 1 Mb ST
Rick Dangerous (pre-prod copy, looks dodgy but is full version, and legal too. Heavily used, was one of my fave games)
Rick Dangerous II
The Sentinel (legendary Firebird game with 10000 levels or whatever)
Shaolin, Chambers of (Thalion, Martial arts game, 2 disks)
International Soccer (Microdeal, I think it's the best soccer game ever on the ST)
Spaceport (like Fort Apocalypse on the C-64, great concept, dodgily programmed)
Starglider (the legendary Jez San game)
ST Karate (great graphics, old karate game by Paradox)
Stone Age (really nice puzzle game by Eclipse, excellent graphics, DOUBLE FORMAT, WORKS ON ST AS WELL AS AMIGA!!)
Teramis, Leavin' (vertical scroller, shooting about spaceship, Thalion game)
Terrorpods (2 disks, graphically impressive, Psygnosis)
Virus (legendary David Braben 3D game, by Firebird, doesn't work on all disk drives (sometimes you have to press the 'eject' button lightly)
Warhawk (budgetware shoot-em-up by Silverbird, with Rob Hubbard music)
War in Middle Earth (RPG "Lord of the Rings", *really* impressive, 3 disks, Melbourne House)
Warp (nice Thalion shoot-em-up)
Wings of Death (great 2 disk shoot-em-up, by Thalion)

COSTS: Remember, no manuals and packaging. All I'll be sending you is the disks. I am selling all this stuff at 2.5 British pounds per disk. Refer to the end of this text for more details.

SECOND CATEGORY: UTILITIES

These are sold without manuals either, unless specified. All original stuff, no pirate stuff.

1st Word Plus, 3.20 TT (2 disks) *
Crypt It (old Tommy Software encryption thing)
Degas Elite (Batteries Included) *
Diamond Edge, version 1.x *
Diamond Edge, the latest version 2 ** (with manual)

Diamond Back 3 ** (with manual)
Ed Hak (editor) *
FastCopy Pro 1.2 * (works on Falcon)
G.I.S.T. the Sound Tool
Desktop Butler James *
Imagecopy 2 * (2 disks)
Imagecopy 3 ** (3 disks)
Imagecopy 4 ** (2 disks) (with manual)
K-Rhyme (rhyming accessory) *
Mortimer (desk thing by Omikron)
Mortimer Plus * (see above)
Mouse Tricks 2 *
Protext 5 ** (4 disks, I might be able to find the manual)
Le Redacteur ** (4 disks)
Spectrum 512 * (512 colour drawing program, ST only)
Turbo ST (screen speeder, ST only)
Universal Item Selector III
View II * (by DMJ software, good stuff)
Warp 9 ** (3 disks, version 3.81, best for ST)
Xboot 3.10 *

COSTS: The regular ones cost 2.5 English pounds per disk. Titles with one *
cost 5 English pounds. Titles with two ** cost 10 English pounds extra. If you
want the manual sent, that will count as one normal disk (2.5 pounds).

Examples:

Protext costs (4 disks plus double extra = 4 * 2.5 + 10) 20 English pounds
without manual. With manual, it costs 22.5.

Imagecopy 3 costs (3 normal disks plus double extra = 3 * 2.5 + 10)

Fastcopy Pro 1.2 costs (1 disk plus extra = 2.5 plus 5) 7.5 pounds.

THIRD (AND LAST) CATEGORY: DEMOS.

This is basically a collection of demos that I have. The price varies per
demo, and is given for each title. The price specified is in British pounds, so
if you want to make another currency of it, check the "additional payment
details", below. All demos are ST only!
!! These demos can only be fill-up orders, or orders if you have ordered more
than 10 British pounds worth of the first and second category !!

BIG Demo (with handwritten text by ES of TEX, ST only) price: 2
Amiga Demo (ST only): 1
California Beach Girls (fantastic monochrome slide show of girls by the Denise
Team. Classic old demo, requires DS disk drive, monochrome only!): 1
Thalion Sound Demo (a copy-protected rare Thalion sound demo, done in 1988,
with Mad Max music. Never officially released. You can't put this in a PD
library because it's copy-protected!): 2
FNIL (large DS disk drive demo by TNT crew): 1

DEF Demo (1 meg version of the first TLB demo, with hand-written label by Tim of the Lost Boys himself!): 2
TCB New Year's Demo: 1
Union Demo: 1
Cuddly Demos: With hand-written stuff by Nic of TCB: 2
Whattaheck Demo: With hand-written stuff by NIC of TCB: 2
Decade Demo by Inner Circle: With hand-written stuff by Griff of Inner Circle, final version of 12 sep 1990, STE compatible: 2
Syntax Terror Demo (megademo by Delta Force, compiled, made, finished and copies at the ST NEWS International Christmas Coding Convention in 1990, signed by New Mode, Slime and Chaos Inc. of DF!!): 7.5 *****
European Demos: (megademo of Overlanders, 2 disks, also finished and copied at the STNICCC in 1990, signed by all members of Overlanders): 8 *****
Dark Side of the Spoon (by ULM, megademo, with custom ULM label): 2
Lightning Demo (by pendragons, with handwritten label by pendragons): 2
Punish Your Machine (two disk demo, excellent, by Delta Force): 4
Ultimate Muzak Demo (by PHF), volumes I through V, five disks, only sold as a set, all with hand-written labels by Grazey of PHF: All five for 8
Ooh Crikey Wot a Scorcher (TLB megademo, excellent, signed by all members of TLB plus other participants such as Oxygene, Tyrem, Fury, Hawkmoon and Tanis of TCB!): 7.5 *****
Ventura Demo (2 disks, I think it's by ST Connextion, with hand-written labels by them): 4
Reality is a Lie: 1
Black and White: Rare Polish megademo, with hand-written stuff and pix by them on label: 2.
Colorz: By Haemaroids, hand-written label by them: 2.
Froggies over the Fence: Three disk "last of the true megademos", released september 1993, with custom Overlanders "Froggies over the Fence" graphic labels": 8 for all three disks.
Bedlam demo by Chaos: 1
Never + Forever Demo by STEW, GfA Basic megademo: 1
The Beginning of the Ending demo by Flexichron: Handwritten label by Offbase of Flexichron: 2

The demos with ***** are kindof special to me, and I am not very keen on selling them because they're signed by old friends and all. So the prices are "STARTING BIDS", meaning that you can bid on them. The person who makes the highest offer gets them.

- READ THE BITS BELOW!! READ THE BITS BELOW!! ------------------------------

ADDITIONAL PAYMENT DETAILS:

I would like people in Europe to pay in British pounds or German marks (German marks = British pounds multiplied by three). People from the Netherlands can pay in Dutch guilders (British pounds multiplied by three). I have to request people outside Europe have to pay in American dollars (British pounds multiplied by 2). No cheques, just cash or International Money Orders from the post office.
I don't like to receive any coins, so if you order for 7.5 or 12.5 pounds (or

whatever other currency) then please pick another title and make sure the total amount is divisible by 5 (INT(x/5)=x/5). If you pay with Dutch guilders or German marks, make sure the amount is divisible by 10. If you pay in dollars, simply round off the amount to the next whole dollar and use US$ 1 bills.

GUARENTEE

I can't give any guarentees. Some of the games are old, and some of them have been sitting in my disk boxes for quite a while. All ST-specific titles have not been played since 1993 or so. I am not out to rip anyone off. I have been doing "ST NEWS" and have been doing (and will be doing) "Ultimate Virus Killer" for quite some time and I hope people know that I can be trusted.

WANT SOME?

Email your order and WAIT FOR CONFIRMATION (DON'T SEND ANY MONEY YET). The quickest mailer gets the first right on a given title. I'll mail back to confirm and then you can send off the dosh. I will despatch the disks by return mail.

If you have any further questions, please just email me.

I was wondering about being able to make "MagiC" programs. Could you even
make Macintosh applications that use the MagiC OS instead of Apple's?
Maybe Intel programs using MagiC OS in place of DOS/Windoze could be run
under MagicPC or am I wrong on this?

Just curious... :)

Anybody running Sound Designer 1.3 on a STE?

Mine keeps crashing with "TOS error -6".

Hi Mario

>* Objects cannot be grouped - or can they? How is it done?

Rubber band them, hold down shift and drag, either to a new page or the grey area at the side. It really does work, all graphical elements can be moved this way. It's an undocumented feature I guess!

>* Can text be piped from one text frame to another (for multi-columns)?

Use the master pages menu to order the flow. You can't flow text from text frames you draw yourself using the 'T' box command :-(

>* Can multiple columns automatically be set up?

Yes, in page setup. Just define number of columns and set the gutter/column gap.

>* Are guidelines possible, and can frames be snapped to guidelines?

Apparently the authors are thinking of this for a future version.

>Any other things that are worth knowing about Papyrus?

The unicode support is mostly fine, but there is a problem/bug. On my 1.04 STFM the ' character doesn't appear to be mapped, you get an error message appear saying something like 'uni 2019 not defined'. If you switch to 8 bit compatibility you gain the ' back but you lose characters from various fonts, especially the bullet-type ones. The exact same set-up on a Falcon works fine. The solution on the STFM is to install MagiC (I used Magic 2) and it works perfectly. I initially blamed NVDI 4 for this problem, but the same occurs with NVDI 3, so it's something to do with Papyrus/Unicode and TOS 1.04. If you haven't got MagiC 2 (at least), this could be a major problem!

However I'd be interested to know if anyone else has this problem, or is it just my STFM!

All in all Papyrus 4 is pretty good, there's not that many major new features over Papyrus 3, but lots of little goodies like smart quotes, which are really useful, and make your work 'proper'. I don't need colour at all, so that's not of much interest to me, but the halftoning settings are useful for creative work, even in b&w.

Perhaps the best major improvement is that many of the most-used functions are now on the ruler bar, rather than in drop-down menus. This has speeded things up no end, and made a substantial difference to the way I work :-)

My advice - Buy It!

No word count or thesaurus, but they are, apparently, on the cards for the next version!

Mike Kerslake - who does a monthly 48 page radio industry magazine almost entirely in Papyrus and a lot of Atari Computing magazine is also laid out with Papyrus!

Amadeus <mobody@my.house> wrote in article
<01bbb8c2$48e5b340$b04cfccd@zook.exis.net>...
I just read an article in an internet newsgroup describing how
to make $50,000.00 in only one month from a $5.00 investment.

Of course I thought this was rediculous ,or some type of pyramid.
I talked it over with my family, an attorney, and my friends, and
they all agreed it was some sort of scam.I hate scams because
usually someone gets burned, and I didn't want it to be me!
I blew it off for a few weeks then saw another one in a
newsgroup I go to alot and thought, "Maybe this is legitimate!".
Besides, whats $5.00 , I spend more than that in the morning on
my way to work on coffee and cigs for the day.

Well, two weeks later,I began recieving money in the mail!
I couldn't believe it! Not just a little , I mean big bucks!
At first only a few hundred dollars, then a week later, a
couple of thousand , then BOOM . By the end of the fourth
week , I had recieved nearly $29,000.00. It came from all
over the world.And every bit of it perfectly legal and on the
up and up. I've been able to pay off all my bills and still had
enough left over for a nice vacation for me and my family.

Not only does it work for me, it works for other folks as well.
Markus Valppu says he made $57,883 in four weeks. Dave Manning claims
he made $53,664 in the same amount of time. Dan Shepstone says it was
only $17,000 for him. Do I know these folks? No, but when I read how
they say they did it, it made sense to me. Enough sense that I'm
taking a similar chance with $5 of my own money. Not a big chance, I
admit--but one with incredible potential, because $5 is all anyone
ever invests in this system. Period. That's all Markus, Dave, or Dan
invested, yet their $5 netted them tens of thousands of dollars each,
in a safe, legal, completely legitimate way. Here's how it works in 3
easy steps:

STEP 1.

Invest your $5 by writing your name and address on five seperate
pieces of paper along with the words, "PLEASE ADD ME TO YOUR MAILING
LIST." (In this way, you're not just sending a dollar to someone;
you're paying for a legitimate service.) Fold a $1 bill, money order,
or bank note inside each paper, and mail them by standard U. S. Mail
to the following five addresses: (Remember: It costs more to send a
letter to Europe, Asia or so)

1. Kristoffer Hochnowski
Peter Ostbyes gt.8
3014 Drammen
Norway

2. Kevin Marshall
2320 Crystal Downs Ct.
Oxnard, CA 93030
USA

3. Robbie Taylor
3104 Sherry Dr.
Raliegh, NC 27604
USA

4. Erik Platte
26 Bolling Road
Portsmouth, VA 23701

5. Ming-huang Yang
8F-7 No.274 Jiing-Shinq Rd.
taipei, 117
Taiwan

STEP 2.

Now remove the top name from the list, and move the
other names up.This way, #5 becomes #4 and so on.
Put your name in as the fifth one on the list.

STEP 3.

Post the article to at least 200 newsgroups. There are at
least 17000 newsgroups at any given moment in time.
Try posting to as many newsgroups as you can.Remember
the more groups you post to, the more people will see your
article and send you cash!

STEP 4.

You are now in business for yourself, and should start seeing
returns within 7 to 14 days! Remember, the internet is new
and huge. There is no way you can lose.

Now here is how and why this system works:

Out of every block of 200 posts I made, I got back 5 responses.
Yes, thats right,only 5. You make $5.00 in cash, not checks or
money orders, but real cash with your name at #5.

Each additional person who sent you $1.00 now also makes 200
additional postings with your name at #4, 1000 postings.On
average then, 50 people will send you $1.00 with your name at
#4,....$50.00 in your pocket!

Now these 50 new people will make 200 postings each with your name at #3 or 10,000 postings. Average return, 500 people= $500. They make 200 postings each with your name at #2= 100,000 postings=5000 returns at $1.00 each=$5,000.00 in cash!

Finally, 5,000 people make 200 postings each with your name at #1 and you get a return of $50,000 before your name drops off the list.And that's only if everyone down the line makes only 200 postings each! Your total income for this one cycle is $55,000.

From time to time when you see your name is no longer on the list, you take the latest posting you can find and start all over again.

REMEMBER....HONESTY IS THE BEST POLICY.YOU DON'T
NEED TO CHEAT THE BASIC IDEA TO MAKE THE MONEY!
GOOD LUCK TO ALL,AND PLEASE PLAY FAIR AND YOU WILL
WIN AND MAKE SOME REAL INSTANT FREE CASH!

>Mega Ste's internal Epson high-density and external Teac high density drive b
>work great.

Sounds good. But I fear that the drives sold nowadays don't have the amount
of configuration possibilities as they used to.
I tried asking about the information I need for my Sony drive in a computer
store, and they had the same drive there, but to my amazement this revision
had yet another jumper-pad removed!

So now there's only one jumper available- the "drive 0/1 select".
Seems like the PC market dominates everything nowadays :-(
Plug and pray... erm, plug and play that is....
But I'm sure that the circuit boards of these drives are more or less the
same as the old revisions, so it's probably possible to solder wires across
the connections where the jumper-pads used to be. Well, that's my guess
anyway.

Now, all I have to do now is track down someone who has the circuit
diagrams for the Sony drive I'm using so I can get down to business!

1201. Need Help with AHDI

Newsgroup: comp.sys.atari.st
Date: 1996-10-20 00:00:00 UTC
From: dinesh@cse.iitb.ernet.in
Message-ID: <1996Oct20.093716.10583@iitb.ernet.in>
Source record: 135480

Hi,
I have a really old (1986) ST upgraded to 1MB ram with an
ATARI 20MB hard drive. (It is THAT old!). I find to my horror that
all my boot floppies (with AHDI in AUTO folder) have been corrupted
and all the useful software (inclusive an archival copy of AHDI!)
is locked in the hard disk which I cannot access!
I'll appreciate your help in resolving this chicken-and-egg
problem. If it helps - I also have a 486 system at home running DOS
and LINUX, on which I can format and create boot diskettes if the
appropriate files could be found.
Thanks in advance.
Dinesh

1202. Atari books for sale...

Newsgroup: comp.sys.atari.st
Date: 1996-10-20 00:00:00 UTC
From: cronos@worldaccess.nl
Message-ID: <N.102096.130426.58@wxs1-6.worldaccess.nl>
Source record: 135481

Some people have mailed me requesting information about the books I have for sale (Atari-related books). Here's an indication (most of them are in boxes so I can't be more specific than I am here).

A load GfA books, in German and Dutch. "GFA Basic and TOS" by Ostrowski, "Het Grote GfA Basic Boek". These will cost you about 10 German marks or 10 Dutch guilders, plus postage.
The "Atari Profibuch Atari ST/STE/TT" (programming bible, in German). This will cost you about 25 German marks or 25 Dutch guilders, plus postage (it's a heavy book, so that might be quite a bit).
"Das Grosse Floppy Buch" (about mass storage media, Data Becker, in German). About 10 German marks or 10 Dutch guilders plus postage.
"Scheibenkleister" (version 2, by Claus Brod, excellent book, includes disk with software, book in German). 15 Dutch guilders or 15 German marks, plus postage.
"The Concise Atari ST 68000 Programmer's Reference Guide" by Katherine Peel. In English. 15 Dutch guilders, 15 German marks or 5 British pounds, plus postage.

I don't ship this stuff outside Europe, that would be much too expensive for you.

Mail me personally for more info.

1203. Pot of gold Atari stuff - INTERESTING MESSAGE!!

Newsgroup: comp.sys.atari.st
Date: 1996-10-20 00:00:00 UTC
From: cronos@worldaccess.nl
Message-ID: <N.102096.132733.23@wxs1-6.worldaccess.nl>
Source record: 135482

Right. I have switched to the PC and will only be retaining various titles
from my Atari software collection insofar as they work on the GEMulator.
Financial reasons have kind of forced me to sell the Falcon, so I will
basically be selling stuff that only works on the Falcon. Ever since I got the
Falcon and sold my MEGA ST, I've been having a lot of ST-specific titles
(games) sitting around that I will also put up for sale here.
Specs follow below. ALL THESE TITLES ARE ORIGINALS, PRE-PROD COPIES, OR
EVALUATION COPIES. NO PIRATE COPIES. Swap offers not welcome.

FIRST CATEGORY: GAMES FOR ST, WITHOUT MANUAL, WITHOUT BOX

Airball
Airball Construction Kit
Arena (2 disks, Psygnosis)
Arkanoid (Imagine/Ocean)
Backlash (Paul Woakes, Novagen)
Barbarian (2 disks, Psygnosis)
Black Lamp (Firebird)
Blood Money (2 disks, Psygnosis, bloody excellent game)
Brattacas (Psygnosis, classic hi/med res game)
Bubble Bobble (disk will handled, was my absolute fave game)
Chaos Engine (2 disks, disks patched for use on Falcon, can't press any keys
until the game starts or it won't work; don't know if it still works on the ST)
Deep Space (2 disks, Psygnosis)
Defender II (ARC/Atari, by Jeff Minter, classic game, but difficult to play)
Dragonflight (Thalion, 2 disks, double-sided drive required)
Dungeon Master
Enchanted Land (Thalion)
Extensor 3.3 (Tron-like game, monochrome only, by Golden Games, ancient)
Gods (superb game, two disks, by Bitmap Brothers)
Goldrunner II (boot/game disk plus data disk, by Microdeal)
Goldrunner II Pete Lyon data disk
Goldrunner II some other guy official data disk
Gridrunner by Llamasoft, excellent game by Jeff Minter
Hitchhiker's Guide to the Galaxy, the original Infocom adventure (alas, no
gadgets anymore, I lost 'em all)
Jambala, the Seven Gates of (Thalion, DS disk version)
James Pond (by Steve Bak, Millenium Software, preview copy, but is a full one)
Jupiter Probe (legendary Steve Bak shoot-em-'up with Rob Hubbard Music)
The Killing Game Show (Psygnosis, 2 disks)
Leatherneck (Microdeal shoot-em-up, really cool, have to disconnect printer to
get it to work, does not work on Falcon, alas)
Lemmings (need I say more?)

Oh No! More Lemmings
Lemmings 2
Lethal XCess (absolutely great shoot-em-up from the author of Wings of Death, by Eclipse, 2 disks)
Little Computer People (Activision, really cute game)
Magic Pockets (great Bitmap Brothers game, one disk)
Monster Business (platform game, Eclipse design)
Nebulus (John Phillips excellent game)
Obliterator (2 disks, Psygnosis)
Photon Storm (hellishly difficult Jeff Minter game)
Prehistoric Tale (Thalion game, coded by The Lost Boys, platform thing)
Return to Genesis (the first true horizontal smooth scrolling shoot-em-up by Steve Bak, excellent graphics, great game)
Revenge of the Mutant Camels, registered version for 1 Mb ST
Rick Dangerous (pre-prod copy, looks dodgy but is full version, and legal too. Heavily used, was one of my fave games)
Rick Dangerous II
The Sentinel (legendary Firebird game with 10000 levels or whatever)
Shaolin, Chambers of (Thalion, Martial arts game, 2 disks)
International Soccer (Microdeal, I think it's the best soccer game ever on the ST)
Spaceport (like Fort Apocalypse on the C-64, great concept, dodgily programmed)
Starglider (the legendary Jez San game)
ST Karate (great graphics, old karate game by Paradox)
Stone Age (really nice puzzle game by Eclipse, excellent graphics, DOUBLE FORMAT, WORKS ON ST AS WELL AS AMIGA!!)
Teramis, Leavin' (vertical scroller, shooting about spaceship, Thalion game)
Terrorpods (2 disks, graphically impressive, Psygnosis)
Virus (legendary David Braben 3D game, by Firebird, doesn't work on all disk drives (sometimes you have to press the 'eject' button lightly)
Warhawk (budgetware shoot-em-up by Silverbird, with Rob Hubbard music)
War in Middle Earth (RPG "Lord of the Rings", *really* impressive, 3 disks, Melbourne House)
Warp (nice Thalion shoot-em-up)
Wings of Death (great 2 disk shoot-em-up, by Thalion)

COSTS: Remember, no manuals and packaging. All I'll be sending you is the disks. I am selling all this stuff at 2.5 British pounds per disk. Refer to the end of this text for more details.

SECOND CATEGORY: UTILITIES

These are sold without manuals either, unless specified. All original stuff, no pirate stuff.

1st Word Plus, 3.20 TT (2 disks) *
Crypt It (old Tommy Software encryption thing)
Degas Elite (Batteries Included) *
Diamond Edge, version 1.x *
Diamond Edge, the latest version 2 ** (with manual)

Diamond Back 3 ** (with manual)
Ed Hak (editor) *
FastCopy Pro 1.2 * (works on Falcon)
G.I.S.T. the Sound Tool
Desktop Butler James *
Imagecopy 2 * (2 disks)
Imagecopy 3 ** (3 disks)
Imagecopy 4 ** (2 disks) (with manual)
K-Rhyme (rhyming accessory) *
Mortimer (desk thing by Omikron)
Mortimer Plus * (see above)
Mouse Tricks 2 *
Protext 5 ** (4 disks, I might be able to find the manual)
Le Redacteur ** (4 disks)
Spectrum 512 * (512 colour drawing program, ST only)
Turbo ST (screen speeder, ST only)
Universal Item Selector III
View II * (by DMJ software, good stuff)
Warp 9 ** (3 disks, version 3.81, best for ST)
Xboot 3.10 *

COSTS: The regular ones cost 2.5 English pounds per disk. Titles with one *
cost 5 English pounds. Titles with two ** cost 10 English pounds extra. If you
want the manual sent, that will count as one normal disk (2.5 pounds).

Examples:

Protext costs (4 disks plus double extra = 4 * 2.5 + 10) 20 English pounds
without manual. With manual, it costs 22.5.

Imagecopy 3 costs (3 normal disks plus double extra = 3 * 2.5 + 10)

Fastcopy Pro 1.2 costs (1 disk plus extra = 2.5 plus 5) 7.5 pounds.

THIRD (AND LAST) CATEGORY: DEMOS.

This is basically a collection of demos that I have. The price varies per
demo, and is given for each title. The price specified is in British pounds, so
if you want to make another currency of it, check the "additional payment
details", below. All demos are ST only!
!! These demos can only be fill-up orders, or orders if you have ordered more
than 10 British pounds worth of the first and second category !!

BIG Demo (with handwritten text by ES of TEX, ST only) price: 2
Amiga Demo (ST only): 1
California Beach Girls (fantastic monochrome slide show of girls by the Denise
Team. Classic old demo, requires DS disk drive, monochrome only!): 1
Thalion Sound Demo (a copy-protected rare Thalion sound demo, done in 1988,
with Mad Max music. Never officially released. You can't put this in a PD
library because it's copy-protected!): 2
FNIL (large DS disk drive demo by TNT crew): 1

DEF Demo (1 meg version of the first TLB demo, with hand-written label by Tim of the Lost Boys himself!): 2
TCB New Year's Demo: 1
Union Demo: 1
Cuddly Demos: With hand-written stuff by Nic of TCB: 2
Whattaheck Demo: With hand-written stuff by NIC of TCB: 2
Decade Demo by Inner Circle: With hand-written stuff by Griff of Inner Circle, final version of 12 sep 1990, STE compatible: 2
Syntax Terror Demo (megademo by Delta Force, compiled, made, finished and copies at the ST NEWS International Christmas Coding Convention in 1990, signed by New Mode, Slime and Chaos Inc. of DF!!): 7.5 *****
European Demos: (megademo of Overlanders, 2 disks, also finished and copied at the STNICCC in 1990, signed by all members of Overlanders): 8 *****
Dark Side of the Spoon (by ULM, megademo, with custom ULM label): 2
Lightning Demo (by pendragons, with handwritten label by pendragons): 2
Punish Your Machine (two disk demo, excellent, by Delta Force): 4
Ultimate Muzak Demo (by PHF), volumes I through V, five disks, only sold as a set, all with hand-written labels by Grazey of PHF: All five for 8
Ooh Crikey Wot a Scorcher (TLB megademo, excellent, signed by all members of TLB plus other participants such as Oxygene, Tyrem, Fury, Hawkmoon and Tanis of TCB!): 7.5 *****
Ventura Demo (2 disks, I think it's by ST Connextion, with hand-written labels by them): 4
Reality is a Lie: 1
Black and White: Rare Polish megademo, with hand-written stuff and pix by them on label: 2.
Colorz: By Haemaroids, hand-written label by them: 2.
Froggies over the Fence: Three disk "last of the true megademos", released september 1993, with custom Overlanders "Froggies over the Fence" graphic labels": 8 for all three disks.
Bedlam demo by Chaos: 1
Never + Forever Demo by STEW, GfA Basic megademo: 1
The Beginning of the Ending demo by Flexichron: Handwritten label by Offbase of Flexichron: 2

The demos with ***** are kindof special to me, and I am not very keen on selling them because they're signed by old friends and all. So the prices are "STARTING BIDS", meaning that you can bid on them. The person who makes the highest offer gets them.

- READ THE BITS BELOW!! READ THE BITS BELOW!! ------------------------------

ADDITIONAL PAYMENT DETAILS:

I would like people in Europe to pay in British pounds or German marks (German marks = British pounds multiplied by three). People from the Netherlands can pay in Dutch guilders (British pounds multiplied by three). I have to request people outside Europe have to pay in American dollars (British pounds multiplied by 2). No cheques, just cash or International Money Orders from the post office.
I don't like to receive any coins, so if you order for 7.5 or 12.5 pounds (or

whatever other currency) then please pick another title and make sure the total amount is divisible by 5 (INT(x/5)=x/5). If you pay with Dutch guilders or German marks, make sure the amount is divisible by 10. If you pay in dollars, simply round off the amount to the next whole dollar and use US$ 1 bills.

GUARENTEE

I can't give any guarentees. Some of the games are old, and some of them have been sitting in my disk boxes for quite a while. All ST-specific titles have not been played since 1993 or so. I am not out to rip anyone off. I have been doing "ST NEWS" and have been doing (and will be doing) "Ultimate Virus Killer" for quite some time and I hope people know that I can be trusted.

WANT SOME?

Email your order and WAIT FOR CONFIRMATION (DON'T SEND ANY MONEY YET). The quickest mailer gets the first right on a given title. I'll mail back to confirm and then you can send off the dosh. I will despatch the disks by return mail.

If you have any further questions, please just email me.

1204. European Demos / Syntax Terror / Ooh Crikey NOSTALGIA

Newsgroup: comp.sys.atari.st
Date: 1996-10-20 00:00:00 UTC
From: cronos@worldaccess.nl
Message-ID: <N.102096.132743.39@wxs1-6.worldaccess.nl>
Source record: 135483

Hi there!

I am putting up for auction my signed copies of Overlanders' "European Demos", Delta Force's "Syntax Terror" and Lost Boys' (plus friends) "Ooh Crikey Wot A Scorcher". These disks are signed by all the members who participated in the creation of these respective demos.
I figured you might want to make a bid on these disks, too. They are all one-disk megademos for Atari ST only; "European Demos" is two disks. I have mailed this message to comp.sys.atari.st too (with more titles that I am getting rid of). The opening bid is 7.5 pounds per demo.
Unless you make a bid, of course, you will not be bothered with more of these messages.

Thanks for your time...cheers!

Agreed, the ones that NVDI comlains about no ID's are fine, but the ones that
it complains about being damaged won't. What makes it worse is that they
work just fine on the wifes' PC at work :-((

Source record: 135486

Well, like the maniac I am, having 2 PCs, and several Ataris, I'd like to put them all up in a network!

I already uses ghostlink to transfer files atari<>PC, and one of my PCs function as a fileserver (novell) for my other PC.
(ghostlink sure is great, why did he stop developing?)

Between my ataris I use a midinet, but I want more!

I want an effortless ethernet connection between my ataris and my novellserver. I want driver software for my atari that supports novell.

I've been looking around, and found a possible ethernetcard that fits my description at a company in germany (Overscan), I've written to them and asked, but recieved no answer.

Is there anybody in this group that knows anything about this?

Any help will be appreciated!

// Tommy

Well, there are a couple of reasons. First the internal speaker just
plain sucks. I think a nice set of Car box speakers would sound better.
Also there are programs out there including the control panel that allow
you to turn it on or off. Also I like the idea of a second output to be
used for recording to cassette or similar while the other output is being
used for listening pleasure or whatever else one would use it for.
Is the internal speaker output the same as the sound output for a RGB
Monitor? If so, Would this mean that the internal speaker and the stock
stereo output could play two different samples or songs etc. at the same
time? (With the right software) Does anyone see what I'm getting at?

To be honest I haven't had one of them for a very long time, I thought
that they had gone away since very early versions. Try getting rid of
any un-needed Auto Progs/Accs and hopefully...

> 2. I have set up a CACHE folder as indicated in the Cab docs but the

This is what the old version required. The docs haven't been updated
to reflect that A-Z folders are needed within the Cace folder along
with empty NEWCACHE.CAB and CACHE.CAB files. If you had the old
version and upgraded then these would have been created but it is a
sort of bug that has yet to be fixed :(

: I was just 'talking to Soft-Logik about this subject and they said the Mac
: program was out but no Clone program as of yet.

I took a look at Pagestream on a TT (running in fast ram) and was impressed with the speed. I think the Cattamarran (sp) would provide the only hardware speed increase on a stock TT but have heard that it is impossible to find. A fast TT or an emulator or better yet Pagestream for the PC. PC's really suck (or blow - your choice) as far as friendly ease of use, but Soft-Logik should address that issue nicely.

I really like Pagestream and wish that the PC market didn't make it so costly for software houses to break into the high end DTP market. I think that is propably the reason for no PC Pagestream - AS YET!) Keep my fingers crossed. There used to be a Pagestream internet e-mail help kind of thing - but, I have seen no activity in the last few months.

If you had not said the wiring was OK I woud have said to check the power
plug connection to the floppy.

It could be that your PSU is on the way out. Can you check that the 12v line
is OK?

How much does a Hades go for these days?

1218. Announcement: BIG Atari WWW page!

Newsgroup: comp.sys.atari.st
Date: 1996-10-20 00:00:00 UTC
From: hallvart@sn.no
Message-ID: <326aa9b22f19e4@sn.no>
Source record: 135497

I've had references to my pages in my signature for a long time now, but
haven't really announced them yet, though many of you have found them...

Anyway, to get to the point..
I've got a big web page with several sections. One of them is dedicated to
Atari ST computers with a whole lot of links (I keep adding new links all
the time). Within that page there are sections covering:

-Commercial companies
-user groups
-Internet software/web browsers
-MiNT/Linux/NetBSD/StonX etc.
-MagicMac
-ST based online magazines
-Ghostscript
-Atari ST newsgroups (German Maus groups)
-Software-download web pages
-other TOS based compatible machines
-Miscellaneous/uncategorizable links

In addition I have two sub-sections:

-FTP site links (the exact same sites/paths as in my FTP site list, updated
as the list itself).
-Beginner's/useful utilities software section (not a regular FTP site, but
rather with useful utilities and "must have" programs to make your
system more complete and efficient as well as informative FAQs,
a virus-list, FTP site list, TOS error message list, CPX modules, TOS
bug-fixes etc.)

To get to my main Atari page, point your browser to:

http://home.sn.no/~hallvart/pages/atari.html

(From there you can access all of the stuff I've just described)

However, if you want to go _directly_ to the two other sub-sections;

http://home.sn.no/~hallvart/pages/atari_ftp.html
(for the "FTP site links page")

http://home.sn.no/~hallvart/pages/atari_sn.html
(for the software directory)

In case you want to find out exactly what the software directory contains,
have a look at (or download) the following "readme" files which contains

file-listings, a short explanation of each file along with file-sizes:

ftp://ftp.sn.no/user/hallvart/atari/00_atari.txt
ftp://ftp.sn.no/user/hallvart/atari/cpx/00_cpx.txt
ftp://ftp.sn.no/user/hallvart/atari/info/00_info.txt
ftp://ftp.sn.no/user/hallvart/atari/fixes/00_fixes.txt

You can ofcourse also access the FTP area directly:

ftp://ftp.sn.no/user/hallvart/atari/

Phew!!! I guess this sounded sort of complicated with all those URL's, but
I just wanted to tell you which options you all have. In short, just go the
the first URL I mentioned which will get you to all those other places.

*** PS. *** All pages are 100% Lynx (text based) compatible which means
that ANY web browser can be used to access them!

Hallvard
--
-ST FTP site list: <ftp://ftp.sn.no/user/hallvart/atari/info/ftplist.txt>
-Atari ST FTP access : <http://home.sn.no/~hallvart/pages/atari_ftp.html>

-Atari ST essentials : <ftp://ftp.sn.no/user/hallvart/atari/>

1219. Questions about installing MiNT

Newsgroup: comp.sys.atari.st
Date: 1996-10-20 00:00:00 UTC
From: hallvart@sn.no
Message-ID: <326aa9ae2eeaa3@sn.no>
Source record: 135498

As the subject says; I've got some questions regarding MiNT and how to install it...

That is, I've successfully been able to install the "TAF" distribution on my harddisk with X11, Chimera and all of that stuff and it works!
So far so good, but the problem arises when I disable the X11 lines in the "mint.cnf" file, so I can run MiNT together with my regular GEM setup.

The first problem is that I get an error message at the bottom of the GEM desktop after all the accessories/auto programs have been loaded:

pid 4 (GEM): minixfs: Rwabs returned -15 sector 1 drive D:

Apparently this (cryptic) message shows me that something is wrong with my D:\ partition, but it looks fine to me- I've even checked it with "Chkdisk" and other harddisk utility programs, so it must have something to do with MiNT then, but what?

I've heard that certain harddisk drivers by ICD give problems, but newer versions should be okay, right? In the "install.txt" file that came with TAF it said that it had been tested with ICD 6.4.2. Now, I'm using 6.5.5 with an ICD "Link II" SCSI adaptor.

Could the problem be due to the partition size?
partition D:\ is after all the biggest one on my setup with 250 Mbytes.
My harddisk is set up like this:

C:\ (Auto program/Accessories/CPX modules/
clipboard/tmp directory/ etc.) 10 Mbytes
D:\ (main partition- GEM software,
utilities etc.) 250 Mbytes
E:\ (MiNT/Minix partition) 60 Mbytes
F:\ (Internet software) 30 Mbytes
G:\ (sound samples/MIDI stuff) 200 Mbytes

As I have another harddisk which I use as backup I should have no problem reformatting/repartitioning my drive. I'm going to do that anyway since my Internet partition is way too small and I have a lot of unused space on my G:\ (sound/MIDI) partition.
I can also make my D:\ partition smaller if it goes beyond some limit causing this error message when MiNT is loaded.

I get the above error message whenever I re-read the D:\ partition (by pressing <ESC> on the desktop while the D:\ partition window is open).
If I do the same with any of the other partitions it just re-reads the contents as usual, but without any sort of error message...

Now, to my surprise I found an extra partition in my "Selectric"
file-selector, namely U:\!!!!
I know I've seen a reference to this drive in "mint.cnf", but I always
though it was some kind of logical drive within MiNT- what's it doing in
GEM, and how can I use it/what can I use it for?

In addition to that error message I described there's also another (much
more serious) problem. I can't run any programs by the usual double
clicking on any .prg .app or whatever.
Whenever I try to do that GEM seems to interpret the file as a text file
since it asks me if I want to view it or print it.
But I can still run the programs I've installed on the desktop using icons
where I just double click them (I'm using TOS 2.06).

So, as you see I'm having trouble integrating MiNT into my GEM environment,
and I'd be happy for any feedback concerning the subject.
As for my setup:

-Atari STe (TOS 2.06/4 Mbytes RAM)
-Quantum Lightning 540S harddisk
-ICD "The Link II" SCSI host-adaptor
-ICD "SCSI tools" which came with the "Link II" (version 6.5.5. driver)

>features over Papyrus 3

That's because the main changes aren't visible from the outside. Papyrus has been re-written from the ground up in order to make an easily portable version. There's an OS/2 version of Papyrus available which has almost exactly the same features (and bugs ;-) as the Atari version. Macintosh and Windows95/NT versions are planned. All versions are based on the same kernal, so if any new features are added they will be available in every Papyrus version.

1226. Little things

Newsgroup: comp.sys.atari.st
Date: 1996-10-20 00:00:00 UTC
From: tom.derrick@acpu.com
Message-ID: <845845469@acpu.com>
Source record: 135505

Hi, everybody!
The Read Me for UIS III includes the statement that keyboard shortcuts exist for most of its functions, but I have never seen a list of them. Whanging on my keyboard produced the list below. I hope you get some use out of it. I am well aware that UIS is getting a little long in the tooth; but most of the cognoscenti in the Boise User Group have it and like it. I would be surprised to find out that we were the only ones.
Keyboard shortcuts for UIS III v3.32
Return = use selected file (duh!)
<Ctrl> x = delete selected file
<Ctrl> r = rename selected file
<Ctrl> c = copy selected file
<Ctrl> m = move selected file
<Ctrl> Undo = cancel
<Ctrl> n = sort by name
<Ctrl> d = sort by date
<Ctrl> t = sort by type
<Ctrl> s = sort by size
<Ctrl> o = no sort
<Ctrl> Escape = move up one directory
Cursor up or down scrolls the window
<Ctrl> p = invokes 'Show Print Cancel' for selected file
<Alt> + (letter) = change to drive <letter>
<Ctrl> / = info for selected file
<Ctrl> \ = calls multiple attribute change using selected file as mask
The last two operate differently when using the shortcut than they do when using the mouse, but I don't know why.
I am also working on figuring out what <Ctrl> cursors/insert/Clr Home do. They can be used to highlight a file or folder, or more than one (with shift), but I haven't figured out the rules yet. <Ctrl> and the numeric keys have similar effects. I haven't found anything that will 'find', make a folder, or format a disk yet.
Note: UIS III and SerPatch2 must run in a certain order, at least on the TT (TOS 3.01). I have forgotten which must run first, but if you see multi-bombs when you move the mouse, change the order of these two.
[rant mode on]
It seems to me that there are endless little projects like this one that could keep those of us like me busy, while the real work is done by Alexander, Dan, and the rest of the crew. While I have hopes to learn programming, and to make significant contributions in that way, there is nothing to keep a dummy like me from doing little things like the above that may have some value to others. I mean, I

had to type it out anyway, didn't I? Why not post it?
I hereby offer my services as a 'dox assembler' and 'dox tester'. Programmers, as has been pointed out, are not necessarily the right people to test the installation procedures and document them. Even their beta testers are chosen for different talents. Let's have the people in the community who are not up to programming, but are up to learning to install the programs and writing comprehensibly about the process, do just that. This could also be combined with translation services. If I learn German. Shouldn't take me more than a few millenia.

Message-ID: <326A898C.4E0F@flash.net>
Source record: 135511

Due to the constant updating of this sig, I am reposting this information regarding the "Text-Movie Warehouse";

http://www.flash.net/~ambrosia/

a site dedicated to text based animations. Many Atascii (8bit) and IGS (ST) files are available for free download, including viewer software and links to emulators.

Our site is in desperate need of Movie contributions. If you have any old text movies (any platform, including RIP and VT100), or you're just looking for fun, please drop by.

This site looks best when viewed using Netscape 2.x and above, though any browser should do.

See you there. Tom D'Ambrosio

>
>-andre
Ah ha I solved this one myself, renaming the extension didn't do anything at
all, BUT using MfsfM and changing the Domain form Mint to TOS did, It worked
first time after that,using this method Opus 2.2 could find it's help files as
well. Now all I need is more memory to load the huge jpeg that came with it.
Also the printer is soooo slooooowwww, as it has to use the TOS routines under
Mint, (No shortcuts aloud obviously) will iPRN II help?

Get the CAB cache tool...this should fix your problems as long
as all of the html and any link you click is still in your cache.

The cache tool is really great!!! It lets you see everything
as its actual name rather than number.htm. It also lets you delete
or view by host...so you can wipe out everthing relating to a particular
html document.

Brian

You have to install the NOHOG-accessory when using minixfs under normal
GEM.

If you want to use MiNTnet under normal GEM you also have to run /etc/syslogd
from MINT.CNF

> Now, to my surprise I found an extra partition in my "Selectric"

It's the root-directory! Every drive is treated like a directory under u:/
e.g. drive c should be accessed as u:/c/. It's perfectly legal to use
c:/ directly, but u:/c/ is supposed to be the proper way.

Interresting, so the Hawk is still alive after all this time? I only hope it's
not to late for them to release it now after all the promissis they made.
Do you have any idea what the price will be? The price the said some years ago
wasn't very cheap, actaully I think it was _very_ expensive...

Is the Barracuda dead and buried, or is it still on the backburner, not
Afterburner. ;-)

1247. Some thoughts on Atari sound

Newsgroup: comp.sys.atari.st
Date: 1996-10-21 00:00:00 UTC
From: Shetland Piper <shetland@wavetech.net>
Message-ID: <54emlo$lqm@tsunami.wavetech.net>
Source record: 135426

I've been thinking, what the Atari really needs is an easy way for software authors to add digital sound to their applications. I've been throwing around the idea of writing an easy to use yet powerfull SoundLib that will allow the easy inclusion of digital sound by C programmers, then using the library to write an AV-Server desk acc (prg for multitasking people) that could be used to reduce memory overhead of TSR's and DA's. It would be really neat to hear King Arthur's squire Concord from 'Monty Python and the Holy Grail' getting hit with an arrow (<thwack> "Message for you Sir!") when you recive an Email, instead of maybe the lame system bell. (STiK developers, are you listening? :) Unfortuatly, I do not yet have the skills to implement such a beast, and anyway I'm putting together a PC system, and will probably jump ship to Linux and retire the ST to a games machine (and/or a terminal)... :-/

Anyway, if anyone is interested, I'd be happy to type out my ideas on how such a thing would work...

Hi!

>What happens is that when I select a page from the Hotlist that I know
>is in the cache I get a brief message "Network is down" and a blank grey
>page, this also appears to empty the corresponding file in the cache.

If you like to start CAB141a offline you just have to start it without Stik and without CAB.OVL (rename it into CAB.OVX). Now you can select Pages from the Hotlist.

bye, Martin

Sounds like the power supply is getting flaky, Ken. If you have a DVM or multimeter available, remove the top cover and shielding, and check the voltage on the +5v line (whihc is probably fine) and the +12v line (which is where I suspect the problem to be). If it is more than 0.5v off from the designated voltage, your PS is probably on its last legs - you can either rebuild it or replace it. Replacement is easier but may be more expensive.

Spell that out, would you? I don't understand what you're trying to say.
Actually, it looks a little like a sinclapism, except you cna spell and
punctuate.

> Why must you alter the character of the situation? If your 'cause'
> is just it should not be harmed by full disclosure.

The "character" of the situation is simple: If any item is legally available
for sale, then making unlicensed copies (or taking someone else's copy) is
theft. Someone, somewhere, is being deprived of something for which they
have worked and for which they are morally and ethically entitled to
remuneration.

I'm not sure what the situation would be if one were duplicating cocaine - I
mean, I don't know if it's legally possible to steal something that one isn't
permitted to possess in the first place - but that's not what the discussion
is about.

And regardless of your personal feelings on this or any other matter, I
appreciate your use of a full email address. Thanks.

Received.

Suggest you use "store" with your STzip program instead of "implode" (which I think is the default). Some versions of PKzip are a bit braindead, and the latest one (2.04g) will owrk fine, but there's a trojan floating around that was made from an earlier PKzip - it claims to be the "latest" PKzip, but is in fact an old one with some "interesting" new features - if you consider random file deletions to be a "feature."

Posted and mailed.

1260. CAF - audio ghost tracks that cycle

Newsgroup: comp.sys.atari.st
Date: 1996-10-21 00:00:00 UTC
From: Mikael Hillborg <Mikael.Hillborg@softlab.se>
Message-ID: <326B9B60.6E3C@softlab.se>
Source record: 135439

Sometimes I create an audio track and use the
pencil holding down control and alternate
dragging (extending) the audio track to create ghost
tracks of it from the left locator to the right. However,
sometimes if I play back that section with a number
of MIDI tracks, the audio seems to get out of sync
after a while. Is this a known bug or what ?
Is there some workaround ? It seems to appear if
there are long sections of ghosttracks, typically
a drum loop that is repeated for several bars. I
cut the start and end of the track precisely at a
bar, which is confirmed when the ghosttracks are
created and the last ghosttrack ends at precisely
a bar. So it should not come out of sync.

So what's happening ? Any workarounds ? Some other
way to create a drum loop that plays through the
whole part ? Should audio parts really be ghost tracks ?
I mean, regular audio parts are almost "ghost" tracks
anyway due to the support for destructive editing.
I use CAF 2.06.

/Mikael

FS: Atari SM124

For Atari ST computers.

Highres paperwhite monitor (640*480 at 70 Hz refresh).

Rock-steady display. Has been resting idly for many years and is in good condition.

Great for MIDI sequencing (Notator requires this monitor!) or DTP.

Asking $80 + shipping or best offer.

Oasis doesn't support PAP (I think that's Password Authentication Protocol,
for whatever that's worth). You'll have to use MiNTnet - AFAIK that's the
only PAP support available for the ST.

Source record: 135443

OK,

I've just got my 1040STf upgraded to 4Mb and want to use some of that capacity to access the www. I hear/read everyones differing opinions 'bout Mint/Cab/STick etc and as such, I don't know which way to turn...

Here's what I have and what I'd like...

STf - single floppy only, SM124 and Scart TV, V34 modem - no ST comms software (MIDI yes!)

I access the Internet generally via Demon.co.uk but also get my mail thru' Compuserve.

I'd like to use the ST as a backup should my PC (palmtop) let go anytime and as I access at home via Nettamer and only able to get text browsing, like to emulate Netscape on the ST if possible?

I am able to muddle through most setup situations, so what's the best route to take and what will it cost me?

All Feedback urgently awaited!

Mark.

I don't run a great selection of software so I'm not the best person
to ask. ;-)

> Or is there already such a list, ?

I've no idea!

Obviously MagicPC incorporates all the required atari operating system
calls so any legally written program has the potential to work. The
problem is I don't know anything about the interface between MagicPC
and the PC itself so I'm not sticking my neck out by guessing!

This is one point I think we all agree on - if it is not POSSIBLE to obtain a legitimately-published copy, because no one will (or can) sell it, a package becomes largely like Kleenex - that is, while it may copyrighted, the odds of anyone prosecuting are so low that it no longer matters, and no one is hurt by free distribution.

>I think that a programmer or software

This is what Annius Groenick has done with Edith, and I know there are others who have done likewise with ST software.

I am in the same situation with NOS. After the modems connect, my
ISP is trying to make a PPP connection with PAP but NOS never connects.

1269. ST Gear FOR SALE - SCOTLAND

Newsgroup: comp.sys.atari.st
Date: 1996-10-21 00:00:00 UTC
From: skr@dcs.ed.ac.uk
Message-ID: <DzMp2y.Go6.0.staffin.dcs.ed.ac.uk@dcs.ed.ac.uk>
Source record: 135448

I have the following stuff to sell (I wish I don't have to but I'm skint and my
Falcon is now priority).

4Mb STe - TOS 1.62
74Mb SCSI Hard Disk (With interface that I built)
SM124 Hi Res Mono Monitor
External DD DS Disk Drive with built in Blitz Hardware & Virus Protector
Panasonic KXP-1223 360 dpi Mono Dot Matrix Printer
Stereo Master Sound Sampler Cartridge
New mouse + spare Atari mice.

600+ games.
All the applications software you could ever need:
eg. Calamus & Calamus SL(inc 100+ fonts)
Stereo Master
First Word Plus
Superbase Professional
Neodesk
...
PD and Shareware utilities:
Everything you could need
eg. Tex, Evererst, MinT, Minix, Thing, GCC,
Graphics stuff, Sound Stuff.
(If you want a full list then mail me)

ST Format Magazines - Nearly all + Coverdisks & Subscriber disks
ST USer Magazines - Nearly All + Coverdisks

Any Offers ....

: Do never use MultiTOS ! If you need multitasking GEM with MiNT, use NAES
: or XaAES. These are efficient and lack the bugs MultiTOS has.

AES 4.0, which came with MultiTOS is slow and buggy, but AES 4.1, which was never released, and is greyware at best, is much faster, and has been, in my experience, very stable. I can't comment on N.AES, as I haven't used it, and I haven't been able to get XaAES up and running for more than a few minutes at a time.

Your Minix directory is corrupted.

This happened to me when my 126 Mbyte partition grew to 250 Mbyte (not
sure how this happened). I found that Minit does not always find the
correct size of the hard disk when it initalises it. I had to use Minit
again, setting the size manually, everything worked then.

Btw, you may start to lose new files if you don't fix it !!

>

It's 'to do' with Minix.
It's not going to be detected by any 'normal' utility programs, use fsck.

> Now, to my surprise I found an extra partition in my "Selectric"
> file-selector, namely U:\!!!!
> I know I've seen a reference to this drive in "mint.cnf", but I always

You can put this on the desktop if you want, just install it like a normal
drive. When you do this, you can 'reach' any other drive from U.

Handy for searches, if you have a lot of partitions.

> In addition to that error message I described there's also another (much
> more serious) problem. I can't run any programs by the usual double
> clicking on any .prg .app or whatever.

> -ICD "SCSI tools" which came with the "Link II" (version 6.5.5. driver)

Looks normal. MiNT is very stable with GEM (IMHO). My setup:
STFM (TOS 1.04/4 Mbytes RAM).
Supra host adapter.
AHDI 6.061.
Various hard drives (7 in total).
Archive streamer.

>
> Anyway, if anyone is interested, I'd be happy to type out my ideas on how
> such a thing would work...

Good idea...there are already programs that will add samples to events
like keyclick, alert bell and even starting up. But you'll have to take
in consideration that this samples will take up some memory.

As for specific sounds for certain appilicatins(like the Monty Python
E-mail reader), then that can use a common routine that plays the sample
on a STFM, STe, or Falcon depending on what machine it is. Not
impossible, but again you have to keep in mind the memory available
especially when multitasking with other programs.

I wouldn't mind such stuff as I only turn on the sound when I play games
on my ST :)

1273. *** How do I reset NVRAM? ***

Newsgroup: comp.sys.atari.st
Date: 1996-10-21 00:00:00 UTC
From: garn9114@kutztown.edu
Message-ID: <54h0a5$q31@jake.esu.edu>
Source record: 135452

Hi! I was hoping someone out there could tell me how to reset the computers' NVRAM. I tried taking it apart hoping for a battery backup, but for the life of me I couldnt' find one.
Let me tell you why I need to replace it (this is a good one). A few months ago I decided to put MiNT on my computer. I used it for a couple of days, but eventually I got bored with it and decided to wipe it. Well, something happened with MiNT (the TAF distribution) and ever since that point Overscan refuses to work on my computer. The minute I put MiNT on Overscan didn't work, and it hasn't worked since. Let me tell you what I've done to get it to work...
When the computer boots up, every Auto program AFTER the overscan program wrote it's information in overscan mode. It was obviously working there. But, the minute I got the Gem screen it was witha border. I changed the order of my auto folder a zillion times, no effect. I tried re-downloading the overscan program: no effect. I downloaded a different overscan program: no effect. Then i started isolating the problem.
I remembered an earlier experiment with Accs I did. I took a dopey program and put an ACC extension on it, then waited to see what happened. It did what it needed, then rebooted the computer (obviously, cause it had no clue what to do next). So I wrote a dopyey program to write something to the screen 20 times. After my auto programs went through (in overscan mode)_ the program I wrote did not write in Overscan. It wrote witha border there. So, obviously, ti's something when Gem starts that's overriding the Overscan.
Okay i said. I got rid of all desk Accs: no effect. I got rid of all auto folders: no effect. I booted off of a floppy with nothing on it but the overscan program: no effect. I turned off my external drive, set my internal drive not to auto boot, then booted off of floppy with nothing on it but newdesk and the overscan program: no effect. I erased the newdesk and made a new one adn booted again: no effect. Obviously, this cannot be software related, as it would seem to be. Smething is messed up internally, and the only thing I can think of dong is erasing the NVRAM.
Another suggestion given to me was to get an NVRAM altering program like Boot-Conf. I used it, set it for overscan mode, and once again my auto programs went in Overscan but Gem wouldn't. I have absolutely no idea why this is happening, but I'm riping my hair out because of it. I've posted on the net twice already, no luck. I'm so desperate that I want to clear out the hard drive, clean out the NVRAM, and start witha fresh computer. So, if someone could tell me how to set the NVRAM I would be a *very* happy camper, and if you can tell me how to fix the problem without clearing everything off I'll kiss you :)

Thanks in advance,
George Garner

I'm wondering why my irc prg shows me it has an error loading the
config when it boots up. Just what file is it looking for, and where is it
looking for this file?

I'm assuming it is looking for the 'Default.cfg file. no matter where I put
this file, irc ignores it. any answers?

I'm also having trouble with cab141a. It gives me two bombs when I want to
go out and find something. About the only thing I don't have trouble with
now since I've tried to upgrade to 141 is antmail.

Anyone?

If you know a genius programmer an novell IPX/SPX stack driver for mint could be written.
Personally I want a NetBEUI stack driver for Mint with Winchat and full drive and device sharing to work with the ethernet driver that is already there. (Quite what the ethernet driver drives I'm not sure, how do you connect an ethernet card to an ST?,any guesses?) I would pay someone to do It but I'm not Bill Gates of the ST world. (I would love to do it myself if anyone wants to teach me Gnu C over the Internet

My life, My ST can multitask and talk to the world, But can I link it to the PC down the hall?, only with a serial cable. (WOW).

No, I dont know it for certain (I dont have, or have access to, a mac)
but as I understand it, all mac applications used the standard os calls
to interface to hardware, and that the OS calls provide an apple-talk
protocol interface.

Someone is welcome to prove me wrong and write a Quickcam driver for
Ataris. :)

Are you using the original AB040 software perhaps?
I've heard that there were lots of problems with that.

So far, I've not had a single problem with any GEM software I've tried and
I keep both caches turned on all the time.
When it comes to games, I've only tried Civilization (fine with both caches
on and running in FastRAM), TowersII demo version (the same as Civ) and
Frontier (runs in FastRAM if unpacked, but doesn't like instruction cache).

You really should join our mailing list and get hold of Doug's new software.

I'm still surprised. I use 64Mb partitions up to drive M quite happily. I
don't know why you might have this problem unless you've somehow forced a
small sector size on a large partition - exceeding the number of sectors that
your OS can access.

This message from Harry to saspeyer@reading.ac.uk came in on a wing and a prayer...

Hi Harry!

>>> Looking to buy classic adventure games (Infocom, Scott Adams, Rainbird,
s>> Contact 16/32 Systems of Kent, U.K
s>>
s>> I don't have their address to hand, but somebody else on this group
s>> should be able to help you out.
s>>
s>> At the Atari Shows in London three weeks ago, I bought 4 Infocom
s>> adventures, and Loom from Lucas. I could also have bought loads of
s>> Sierra games too (Space Quest, Kings Quest etc.) if I'd wanted to.
Oliver might like to know that "The Lost Treasures of Infocom" in two volumes used to be available from some PC shops and from Special Reserve. Whilst the interpreter on those disks are PC executables, the data files themselves are runnable from interpreters from other platforms, including the Atari (and the Psion series 3(a) PDAs) :-)))

Speak to 'ya later!

This is probably because GEM will use the data in the NEWDESK.INF file
to reset the screen resolution. NVRAM settings are only valid until
NEWDESK.INF is loaded.
BTW, BOOTCONF automatically resets the NVRAM before writing the new
settings.

Hi there!

I bought a V22bis modem at a car boot sale on Sunday. I know it's slow (2400) but I have net and WWW access at work and I only need something for BBS's and it only cost GBP8. It was unused in a sealed box and I've hooked it up to my Falcon using Teddy Term 2. I know it works because I can connect to 42BBS without problem. I don't seem to be able to get in anywhere else though. Upon connect I get a row of tilde (~) characters across the screen before being thrown out about 30 seconds later.

If anyone has any suggestions (apart from get a faster modem) I would appreciate your help.

Regards
Martyn

1289. ANNOUNCE: XaAES beta 6 released

Newsgroup: comp.sys.atari.st
Date: 1996-10-22 00:00:00 UTC
From: c_graham@patrol.i-way.co.uk
Message-ID: <54ie7t$s25@lira.i-way.co.uk>
Source record: 135369

I have the pleasure of announcing the release of XaAES beta release 6.

Here's a summary:
==========

It's been monthes in the making, and really doesn't include enough new
stuff to justify the wait - all I can say is that I've been real busy
at work, and I bought a sports car (so when the sun shined I went
driving instead of working on XaAES). I was hoping to try this with
the new MiNT kernal with the virtual memory support, but unfortunately

VM doesn't like my f030 very much at all.

It's (fairly) stable compared to beta 5, and probably a little quicker
- depending on what you are doing of course).

New stuff in this beta includes:

o Widgets are now in a resource file.
o One version runs in all modes.
o Works in 256 colour mode now.
o Fixed compatibility problems with EGEM applications, so LHAshell &

ESS-Decode both work now.
o Moose device driver is now accessed directly, so the seperate
MOUSESRV program is no longer required.
o Improved menu handling (point-to-drop after initial click,
Click..hold..select-on-release)
o Windows can be moved off-screen (bottom & right-hand edges only
at the moment).
o New object display routines, and a new scrolling list object.
o Live/realtime window scrolling (WinX style) - right button is normal

scroll, left button is live scroll.
o New video mode select code that actually works with NVDI4 :)
o New task manager window providing:
- Program launch
- Client Kill
- Suspend / hide app (not done yet)
- Resume
o File Selector - not yet the finished article, but getting there.
Optional alpha sort (build switch), upper/lower case + long
filenames, u: relative paths (always), fsel_input() &
fsel_exinput(), filters. More to come in the next release....
o Rectangle list handling is totally re-vamped to improve stability,
speed and remove all those display bugs that were such a pain in
beta5.

o Now works with MiNT memory protection turned on. At last.
o Blitting now used for top window moves (no WM_REDRAW sent to app)
- this speeds up the feel of XaAES quite nicely....
==========

You can get it from my WWW page (68K binary only today, source
tommorow) at:

http://www.i-way.co.uk/~c_graham/files.html

Still got bugs in it - nobody's perfect....

Craig Graham.

Well like I said in my post, if it supports STiK it automatically supports
MiNTNet (and thus PPP).

No. I was replying to the statement that MagiC 5 will support long filenames
and mentioning that MiNT+MinixFS already supports long filenames. I didn't say
it supported long filenames using the same format as Windows95.

--

That's pretty much what SAM (System Audio Manager), supplied with the Falcon
is intended to do. It runs on any DMA sound equipped Atari (STe, TT, Falcon)
and allows you to assign audio to GEM events (windows, fileselector, etc.)

It also allows you to use it to assign sounds to your own application - or
rather, to let the user assign whatever sounds they want. It's interface
is briefly mentioned in TAC, _BUT_ it requires each program that wishes to
use it to have an associated "*.SAA" file (SAM Aware Application). Whilst
the triggering of sounds seems to be simple from the docs, I have yet to
find anything that tells me the format of an SAA file.

If anyone knows this, please pass it on for distibution, as I think SAM is
probably the way forward in this respect.

Cheers,

Xav

Hi fellows,

I don't know if this mess is all because of me, but here is what I think of this topic.

Well, I've sent a letter to the Atari newsgroups about trading games via e-mail. I've got many answers, so I started the business. I told you in my letter that I'd like to trade without paying or asking for money and that's the truth. I don't want to get a penny for it. But that's only one side of the story.

I live in Budapest, Hunagry, and here you can't get original games, and if you try to buy original softwares from abroad, you have to sell your pants too, to get through. (You know how bad hungarian forint is nowadays...)
The only way to get games is to contact with other hungarian ST users (who have cracked softwares...) or other people from abroad (DITTO).

I saw only few original software (game!) here in Budapest. My brother has the original version of Sim City. Yeah! He has bought it in France and it wasn't so cheap...

Anyway, there's a good hungarian saying: Not your trousers? Don't wear it...
Hope you understand it...
If you think I'm a stupid idiot, you have the right to think of me this way, so if you find it disgusting, just skip my letter, I don't care.

But if you wanna trade, just contact me.
My 5 pences...

The Hidden (aka Sebi)

(P.s.> I didn't want to hurt anybody's feelings, so if I wrote something rude, excuse me for that...)
(P.s2.> Anyway, I agree totally with what you say, Yragael although it is true that the laws don't permit to trade with softwares either they're old or not.)

Geneva 005 is in final beta right now, and works even better with MiNT.
The most noticeable thing is the speed improvement, and many bugfixes.

1299. Atarifest '96!

Newsgroup: comp.sys.atari.st
Date: 1996-10-22 00:00:00 UTC
From: David Troy <dave@toad.net>
Message-ID: <326CE4E4.1F47@toad.net>
Source record: 135379

ATARIFEST '96 APPROACHES FAST -- BE THERE ON OCTOBER 26th!

Preparations for Atarifest '96 are in full swing, and it looks like it will be another exciting event! Things to look forward to include:

- Great deals on ST/Falcon/TT Software & Hardware
- Fantastic prices on Jaguar Hardware & Games
- Amazing deals on Lynx Hardware & Games
- CLEARANCE, OVERSTOCK and other UNBELIEVABLY PRICED ITEMS!
- FREE GIVEAWAYS & REFRESHMENTS!
- Complete ROOM full of Atari 8-Bit Items!
- Great selection of Portfolio Accessories!
- LOTS, LOTS MORE!

Also, several Atari developers & friends will be in attendance including:

* Tom Harker, ICD (Link, BattleSphere, and a NEW PC Video product!)
* Darek Mihocka (Demonstrating Gemulator '96)
* It's All Relative (Greg Kopchak -- the greatest Atari CD's!)
* Matt Norcross (Floating Fish Studios, creators of BIRD OF PREY CD)
* Tim Hebel (A.K.A. Spud Boy)
* Others to be announced!!

We'll have demos of fun/current Atari programs & products, like always, plus any other cool things we can come up with. We're working hard to be sure this is the definitive Atari event!!

Also, we'll be featuring the following hot software products:

- MagiC 5
- HD Driver 6
- Gemulator 96

And of course, we have a fantastic deal on a Pentium 166MHz PC with Gemulator 96 for just $1299! AND ADMISSION TO ATARIFEST '96 IS COMPLETELY FREE! No matter where you are, you're not too far away to come (well, maybe Papua New Guinea is a _little_ far, but you really should consider it!)

It's a fact that Atari products are becoming harder and harder to find; this may be your last chance to pick up some of the most interesting stuff. Our collection of used/demo equipment is way cool. You'll have to

see it to believe it.

We're looking forward to seeing you at the show. If you have questions about the show, about where to stay, or what else to do in the area, please contact us at 'info@toad.net' or call (410) 544-6943. You can get directions to our store at http://www.toad.net/direxns.html.

Thanks again! We're looking forward to seeing you!

Dave Troy

What on earth is that? (I'm just a user, not a hacker) ;-)

>If you want to use MiNTnet under normal GEM you also have to run /etc/syslogd
>from MINT.CNF

I have a line which goes like this:

exec \usr\etc\syslogd

But it doesn't make any difference. Same problem.

(I've also tried "\etc\syslogd" which you mention, but I'm sure it should
be with the MSDOS/TOS style slashes instead of the UNIX style "/" as all of
the other paths in that file are like that.)

>> In addition to that error message I described there's also another (much
>> more serious) problem. I can't run any programs by the usual double
>> clicking on any .prg .app or whatever.
>> Whenever I try to do that GEM seems to interpret the file as a text file

>> where I just double click them (I'm using TOS 2.06).
>
>Delete your NEWDESK.INF. I've had this problem myself with 2.06.

Nope. It only happens when I boot with "mintnp.prg" in the auto folder
(i.e. I load MiNT into the system).
Otherwise the system works just fine.
(I tried booting the system without the "newdesk.inf" file- the same thing
happened as long as I booted with MiNT, so the problem must lie within MiNT
somewhere.

Now, are there size limits to partitions in MiNT? Someone else here said
that 243 MBytes (or something) was the limit for a partition.... I don't
exactly remember the details- perhaps I'm missing out on something here,
but someone did talk about a limit to partitions in some context which I
can't quite remember now.

I partitioned the drive with AHDI compatability mode selected using the ICD
HDUTIL.PRG - the drive was formatted on an Adaptec AH-2940 and then moved
directly to the ST. 64 megs would be a pretty small partition on a 4 gig
drive, however. It was still gratifying to see that he system would come up -
I won't be totally "off the air" if my AdSCSI+ should suddenly die, just badly
cramped.

It's not all becasue of you - the discussion is older than either of us, I imagine.

However, in order to help you out and do The Right Thing, I'll send you some original games via snail mail - just email your postal address to me. I have Emmanuelle, and my German is pretty rusty, so you're welcome to that, and I'll sort through things and see what else I can live without.

Since it /is/ so hard to get things in Hungary, I'd suggest that other Atarians world-wide chip in - if everyone sends just one or two items, Hungary can come out of the "Dark Ages" and play /real/ Atari games. <G>

Posted and mailed.

I don't understand... I tried to install the TAF distribution on another harddisk and got the same message, so apparently it must be the problem you mention with incorrect size or something.
But how do I set this manually and what do I enter as values? This sounds like a complicated thing to do- and I'm *not* a programmer. I just want the thing to work!

I've got fcsk on my MiNT partition, but I don't know how to use it or interpret the messages it gives. By the way, what exactly is "fcsk"?
A "fixer" program or just something which gives status reports?

>> Now, to my surprise I found an extra partition in my "Selectric"

I see, but I can't use any of these files can I? Or can I use them if that MiNT program is installed in the auto folder, so I can just double click and run various UNIX/MiNT applications from GEM?

>Handy for searches, if you have a lot of partitions.

Yes, I've got 5, which makes 6 with partition U:/ then. Selectric is great
for file-searching.

Yes. I've just checked by running without it, and I see no reason why
newdesk shouldn't be okay. I got the same problem without newdesk.inf, but
in addition I couldn't run any programs at all ofcourse since there were no
icons on the desktop associated with programs.

>> As for my setup:

>Looks normal. MiNT is very stable with GEM (IMHO).

I know that I can somehow integrate MiNT programs in GEM using
"Toswin.acc", but not exactly how, but I can get back to that later when
I've got those other problems out of the way.

Well, without a hard drive, you can basically forget about the Mint/MintNet
package. If you can swing it, get a SLIP account and use STiK and CAB.
Of course, you won't have much of a disk cache, so make sure to bump your
RAM cache up as much as possible in CAB....

TOAD COMPUTERS ANNOUNCES ATARIFEST '96! 9/17/96

Come celebrate TEN WONDERFUL YEARS of AtariFests, Toad Computers, and TOS at AtariFest '96. Toad Computers is pleased to announce AtariFest '96, to be held October 26th, 1996 at Toad Computers, in Severna Park, Maryland, USA.

- Door Prizes
- Atari BARGAINS
- PC Systems
- Browse the Internet
- Atari Show & Tell
- FREE REFRESHMENTS!
- FREE ADMISSION!

We will be featuring a wide range of SPECTACULAR deals on new and used Atari products including Jaguar, Lynx, ST, TT, Falcon, Portfolio, and the 8-Bit series. We are really excited about the show!

CELEBRATE THE WORLD OF ATARI!
Atari products are drying up fast; this may be your last chance to pick up Atari hardware, software, and accessories, all at incredibly low prices! Plus, see whatï¿½s new from Europe for the ST and Falcon, including:

- MagiC 5 (with Windows 95 Long Filename Support)
- MagiC PC (MagiC for the PC with Ease 5)
- MagiC Mac (running MagiC 5 and Ease 5)
- Ease 5 for Atari
- Texel -- NEW Atari Spreadsheet!

Donï¿½t miss this opportunity!

AtariFest ï¿½96 is being held in place of our Holiday Festivals we have hosted for the past three years. Now, itï¿½s a little earlier, and itï¿½s a different format. We really hope youï¿½ll join us for what weï¿½re sure will be a once-in-a-lifetime event!

SPECIALS you can take advantage of at ATARIFEST '96:

Toad Chameleon 166MHz: JUST $1299.00!
- Pentium 166 - 16MB RAM
- 1.3GB Hard Disk - Gemulator 96
- 1MB PCI Video - Windows 95 & Plus!
- 3.5ï¿½ Floppy - Mini Tower Case
- 8X CD ROM - Keyboard, Mouse
- Speakers - 16-Bit Sound Card

Comes with Gemulator '96 -- RUN YOUR FAVORITE
ST PROGRAMS! Includes MagiC, so no hardware
is necessary to run Gemulator!

ATARI JAGUAR: Just $59.00!
- Includes Complete Atari Jaguar Console
- Includes WOLFENSTEIN 3D Game!

Hundreds of fantastic deals on CLEARANCE ITEMS,
OVERSTOCKS, and DEMO MODELS in ALL PRODUCT CATEGORIES!
Must be present to take advantage of these prices!

Doni¿½t miss this event! Door prizes! Free stuff! Great prices!
Bring your most unique Atari memorabilia for show & tell! Select
developers will be in attendance to answer your questions about
products! Stay tuned to STNEWS/JAGNEWS and www.ataricentral.com
for more details!

When: 9:00AM - 5:00PM
Sat., Oct. 26, 1996
ONE FUN-PACKED DAY ONLY!

Tomo,

As I am the person who sold you the Falcon, I feel a bit of moral responce-ability to help you out - even though the Falcon worked perfectly when you received it from me!

Have you tried bypassing the hard drive? IIRC, you can do so by holding down the control key once the Atari logo appears _and keeping it_ held down until the bootup is complete. This should get you to a bare desktop. If that fails, turn the power off, open the F* up and unplug the hard drive's larger connector this will permit you to boot from floppy.

I suspect that some bit of software you've loaded is causing the problem, if it still occurs with no hard drive, than you have some problem with the hardware. Always use a static mat and wristband when working on your bird. It's quite possible to zap some of the chips inside with staic from your hands if you don't do this - and then things get expensive! Drat, that should read "static from your hands".

Have you tried another monitor with the F* or plugging it into a TV?

Good luck with your prblem, I'm sure it's fixable! I got your email earlier, BTW, but you made no mention of this problem - and you caught me when I was nuclear busy - hence my non-reply!

John

1312. PPP-PAP

Newsgroup: comp.sys.atari.st

>instead.
> I'm trying to configure Oasis135 in PPP mode and will install Mint if I
>have to.:(

I don't think PAP is usable with NOS... The code for it is included,
but I never could make it work. If someone knows how to do it...

But Mint/MintNet is much more simple to setup than you think, if you
take the PPPKIT14.ZIP from ftp.cnam.fr. It's a minimum kit to start
browsing with CAB, no Minix partition, not much disk space (a little more
than 1Mb), no special AES or desktop, and full installation guide in
English and in French. Even example scripts are included, for Compuserve
and Imaginet.

None of them uses Password Authentication Protocol, but I was able to
configure Mintnet for it (on Nordnet) very easely. You set a "USER
YourLogin" statement in the PPPD parameters file, and create in /etc/ppp/
a 'ppp-secrets' file containing one line: "YourLogin * YourPassword". On a
standard TOS partition like mine the file will only be named 'PPP-SECR',
but it works anyway.

It took me one hour to install, from unzipping the kit to first online
web browsing... No clients are included, but on ftp sites you can find
many ftp, pop, traceroute, ping, nfs, smtp (including the famous
sendmail), http (not only CAB, but Lynx, etc...), finger, etc... clients,
either in graphical (GEM) or text mode (there is a tcsh shell included).

Bye! Bruno.

> >You have to install the NOHOG-accessory when using minixfs under normal
> >GEM.
>
> What on earth is that? (I'm just a user, not a hacker) ;-)

It's a small accessory that prevents GEM from hogging the CPU. Gem
runs in supervisor-mode much of the time, and MiNT can't preempt in
supervisor-mode (yet.). If you don't use NOHOG, you'll get the
error-message described above. There's nothing wrong with your
partition.

NOHOG.ACC is a part of the MINIXFS-package, you could download it from
almost any ftp-site.

> I have a line which goes like this:
>
> exec \usr\etc\syslogd

It should be...

exec u:\usr\etc\syslogd

Sorry, my fault.

> (I've also tried "\etc\syslogd" which you mention, but I'm sure it should
> be with the MSDOS/TOS style slashes instead of the UNIX style "/" as all of
> the other paths in that file are like that.)

You're right. You should use backslash in MINT.CNF.

> Nope. It only happens when I boot with "mintnp.prg" in the auto folder
> (i.e. I load MiNT into the system).
> Otherwise the system works just fine.
> (I tried booting the system without the "newdesk.inf" file- the same thing
> happened as long as I booted with MiNT, so the problem must lie within MiNT
> somewhere.

Weird... I've never encountered this problem before. What version do you
use? I use 1.14, and I've had no such problems. I'm using 4.04 though...
It could be that the combination of your harddisk-driver (ICD?) and
the particular version of MiNT you're using causes this problem. Try
an older/newer MiNT.

> Now, are there size limits to partitions in MiNT? Someone else here said
> that 243 MBytes (or something) was the limit for a partition.... I don't
> exactly remember the details- perhaps I'm missing out on something here,

> but someone did talk about a limit to partitions in some context which I
> can't quite remember now.

In theory you can use as big partitions as your driver supports. Since
you use the ICD-driver (Not really recommended with MiNT!) you should be
carefu though. I have two Minix-partitions of 60Mb each, and that works
fine. For TOS-partitions there are no limitiations except for those
introduced by the driver. You should try CBHD, Hushi or HD-Driver.

Here is the correct address for CACE - Calgary Atari Computer Enthusiasts

http://www.spots.ab.ca/~bro/cace/cacewelcome.html

CACE wuld like to thank Shane Bro for the donation of the space to
maintain this page.

If there is any one interested CACE meets twice a month on the first and
third modays. We can be reached by calling either myself (tom McCartney)
at 403-271-1481 or melody hall at 403 - 252-1724

New members are ALWAYS welcome.

Thanks for your interest halvard.

1316. Atari Lynx Replacement Parts?

Newsgroup: comp.sys.atari.st
Date: 1996-10-22 00:00:00 UTC
From: mparrott@kendaco.telebyte.com
Message-ID: <54jdh4$1in@kendaco.telebyte.com>
Source record: 135396

I have an Atari Lynx II that was dropped, cracking the faceplate which wraps around the top, front and bottom of the unit. The electronics still work, but without a faceplate holding the clear cover over the LCD display, more damage seems quite possible. It'd be easy enough to fix, if only I could get my hands on a replacement faceplate.

Toad Computers has told me (after many delays) that they cannot obtain a replacement faceplate for me. A call to Atari's voice-mail "support" line reveals that they want the unit mailed to them, whereupon someone will look at it and write me back telling me how much it would cost to fix it (no live operator will come on the line). I figure by the time that dance is done, it'd be a couple of months before I actually had the Lynx back in my hands.

All I need is a replacement faceplate for a Lynx II. Would anyone out there be kind enough to point me to a source from which I could order one? Many thanks for any replies!

No, Okami does not require Mercury. You can use Okami with UUCP and
SOUP.

Mail me if you have problems with it.

Its looking for its own config file created when you use the /config
option (while in the irc program)

>I'm assuming it is looking for the 'Default.cfg file. no matter where I put
>this file, irc ignores it. any answers?

Nope IRC doesn't use any of the info in the default.cfg file anymore
you may as well take any of this info out of your default.cfg file.

1321. 4 Sale in UK - ST Games

Newsgroup: comp.sys.atari.st
Date: 1996-10-22 00:00:00 UTC
From: Michael Clemmetsen <michael.clemmetsen@sunderland.ac.uk>
Message-ID: <01bbc01b$2cd001a0$80dfe49d@michael_home1.ac.uk>
Source record: 135401

Hi,

Since buying a Jaguar, I never play games on my ST, so
I have the following Atari ST games for sale in the UK:

Backlash - 3D shootemup (not original box)
Battle Command - 3D tank simulator
Carrier Command - 3D aircraft carrier simulator (not original box)
Damocles - 3D planet exploration/puzzler
Driller - 3D planet exploration/puzzler (not original box)
F-19 Stealth Fighter - 3D flight sim
Interphase - 3D shootemup/strategy
Jet - 3D flight sim
Paris-Dakar Rally - bitmapped driving sim (not original box)
Resolution 101 - 3D shootemup in hover car
StarGlider 2 - 3D space combat (also works on SM124!)
Twylyte - 3D shootemup
The Untouchables - bitmapped shootemup/platformer
War Zone - bitmapped shootemup, vertical scrolling

As you can gather I like 3D point of view games!

All games are originals and include original instructions, keyboard
overlays (where applicable) and packaging. They all require a colour
monitor/TV and a double-sided disk drive, but this shouldn't be a
problem for most people. Some of them also include saved game disks
and any cheats or hints I have discovered.
Exceptions to this are indicated in the above list.

I would like to sell them as a job lot, so there are no individual prices.
The price for everything including postage and packing to anywhere in
the UK is 40 UK pounds.

If you are interested, please send an email to:

michael.clemmetsen@sunderland.ac.uk

Just download them on to the IBM and then copy them on to Double-Sided
(i.e. 720Kb) 3.5 inch floppies. Format the floppies on the IBM to make sure
both machines can read them. If the files are compressed, you may wish to
decompress them on the IBM machine first to save time. Unless, of course,
you have a hard disk for the 1040.

What do I have to do?
Where can I connect such a HDD?
Do I need something?
Please send me an e-mail to wester@redestb.es
Thanks a lot :)

1327. GEMULATOR 96 upgrades now available

Newsgroup: comp.sys.atari.st
Date: 1996-10-23 00:00:00 UTC
From: brasoft@coho.halcyon.com
Message-ID: <54lqoa$1gp@news1.halcyon.com>
Source record: 135264

All registered users of Gemulator (including Gemulator 1.0, 2.0, 2.1, 3.0, 3.02, Gemulator Classic, Gemulator 4.0, 4.1, 4.15, and Gemulator for Laptops) are now eligible to upgrade to Gemulator 96.

Most users are eligible for a free upgrade. Others can upgrade for a $29.95 upgrade fee.

Gemulator 96 directly upgrades Gemulator versions 4.0 and higher, and also replaces older versions of Gemulator when using Windows.

We also accept trade-ins towards the purchase of the Gemulator 96 upgrade. For more information see the emulation web page at http://www.emulators.com.

Compared to Gemulator 4, Gemulator 96 adds these features:

- 10% to 30% faster execution than older versions of Gemulator, and up to 3 times faster than competing emulators such as Janus and MagiC PC.
o
- runs both in "windowed" mode on the Windows desktop, and full screen mode in resolutions from 320x200 up to 1600x1200 (color and mono).

- runs on Windows 3.1, Windows 95, Windows NT on any 386 or higher

- runs on notebook computers as well as desktop computers

- built-in 68000 debugger, support for third party 68000 debuggers

- small disk and memory footprint. Less than half the size of Magic PC. Easily installs on a floppy disk which you can carry around with you to run Atari ST software on any Windows computer. No other Atari emulator lets you do that.

See the Gemulator 96 demonstration (and buy it!) this weekend, on October 26th, at the Toad Atarifest. Contact Toad Computers for show directions.

- Darek

> I'm trying to configure Oasis135 in PPP mode and will install Mint if I
>have to.:(

I don't think PAP is usable with NOS... The code for it is included,
but I never could make it work. If someone knows how to do it...

But Mint/MintNet is much more simple to setup than you think, if you
take the PPPKIT14.ZIP from ftp.cnam.fr. It's a minimum kit to start
browsing with CAB, no Minix partition, not much disk space (a little more
than 1Mb), no special AES or desktop, and full installation guide in
English and in French. Even example scripts are included, for Compuserve
and Imaginet.

None of them uses Password Authentication Protocol, but I was able to
configure Mintnet for it (on Nordnet) very easely. You set a "USER
YourLogin" statement in the PPPD parameters file, and create in /etc/ppp/
a 'ppp-secrets' file containing one line: "YourLogin * YourPassword". On a
standard TOS partition like mine the file will only be named 'PPP-SECR',
but it works anyway.

It took me one hour to install, from unzipping the kit to first online
web browsing... No clients are included, but on ftp sites you can find
many ftp, pop, traceroute, ping, nfs, smtp (including the famous
sendmail), http (not only CAB, but Lynx, etc...), finger, etc... clients,
either in graphical (GEM) or text mode (there is a tcsh shell included).

Bye! Bruno.

No. On the ST is not any program to convert these fonts.
For Windowz is a program called "Font Monger" wich can convert windows
truetype
to normal truetype compatible with mac fonts.

Hi!

I'm looking for the Bloodwych extra disk for Amiga, or if you have some sort of IBM version of it I'm happy.

Thanks.

At the moment someone is busy to make an ethernet card that will support
the Atari Midicom Protocol, the TCP/IP protocol and the M$ network
protocol. It will be thin-ethernet with BNC-connections.
If someone can still find a DLink DE600 ethernet pocket adaptor he can
use this to connect his Atari to an ethernet network.

> Is there anybody in this group that knows anything about this?

Take a look at my pages for more info about this. Maybe you'll find
something you can use.

Hello,

AFAIK, compressed file have a (capital) Z file ending. I know there
are compress methodes who use a (small) z as file ending like gnzip (v
1.1.1 and older)
So the file ending is important when you type in the command.
Compress.ttp expect files with a (capital) Z ending. Maybe that's what
you're doing wrong.
Hope this help

Look on http://www.emulators.com for the latest information on Gemulator 96, the fastest Atari ST emulator available for Windows 3.1 and Windows 95.

You can either purchase Gemulator 96 starting at $69.95 up to $179.95 for various packages, or trade in your old Atari ST computer and save the $179.95.

1352. JANUS / MAGIC PC trade in for GEMULATOR 96

Newsgroup: comp.sys.atari.st
Date: 1996-10-23 00:00:00 UTC
From: brasoft@coho.halcyon.com
Message-ID: <54lroe$27p@news1.halcyon.com>
Source record: 135334

Do you own either a Janus or Magic PC Atari ST emulator? Are you getting tired of how slow your emulator runs? Are you pissed off you wasted so much money on an emulator that runs slower and does less than Gemulator?

Now is your opportunity to make right!

Gemulator 96 is the fastest, least expensive, and smallest (in terms of memory consumption and disk usage) Atari ST emulator, developed using our 5 years experience of developing Atari ST emulators.

If you own Janus, you can trade in your Janus card for a new Gemulator 96 with card. Your existing TOS 2.06 ROMs will be installed on the Gemulator card and returned to you. Users of 486/50 and faster computers will notice a significant speed up using Gemulator compared to using Janus, and you will be able to take advantage of graphics resolutions up to 1600x1200.

Or you can keep your existing Janus card and pay only $99.95 for Gemulator 96 and the Gemulator card.

MagiC PC users, send in your original MagiC PC disk along with $49.95 and you will be sent back a new copy of Gemulator 96 (a 30% savings) along with your original disk. Gemulator 96 uses the same version of MagiC that was installed by MagiC PC making it very trivial to install. You will immediately notice that Gemulator 96 runs much faster than your old MagiC PC. You will also have new features available, such as running in full screen mode, the built in 68000 debugger, and them smaller disk and memory requirements will take a load off your PC.

For complete information see the emulation web page at http://www.emulators.com.

1353. Wormhole and Antmail status report

Newsgroup: comp.sys.atari.st
Date: 1996-10-23 00:00:00 UTC
From: *atari@teleport.com*
Message-ID: <54lqr6$bmo@ornews.intel.com>
Source record: 135335

As of this morning, I have a version of Wormhole working with Antmail; this allows sending and receiving fiod-style (e.g., NeST, TurboNet, AtariNet) packets via the Internet and thus eliminating long-distance calls for many sysops.

Overview:

Antmail operates as usual (e.g., you still have to make the calls to your ISP yourself and click "send queue" and "get mail").

Jetmail/IOSmail operates as usual (packs/unpacks/tosses fido-style packets.

Wormhole 0.70alpha and later can be run from a batch file or by Semper, so it need not be done manually, but manual operation is also possible. When it runs, it looks at your Antmail mailbox for Autonet/Wormhole packets; if it finds any, it copies them to a temporary file, flags the Antmail message as deleted (although it's still there if you need it for something else), and calls the UUdecoder to put the proper packet in your inbound folder. Then it looks at your outbound folder and sends packets that you have selected in the control file as Internet nodes into your Antmail queue, after which it deletes the packets from your fido-style outbound folder.

Next time you connect to send/receive email with Antmail, your outbound packets are send and incoming received.

I am now using this routine (since my NOS-compatible ISP has pretty much disappeared) to bring NeST into North America. NeST and Atarinet wormhole feeds are available from me; you don't even need Binkley or Semper to do it this way!

Wormhole 0.70alpha needs testers. Any volunteers? Email me at the above address and I will UUcode the package to you for testing. Full release is hoped for before November 5, so hurry!

1357. FS: Atari TT030 System (US)

Newsgroup: comp.sys.atari.st
Date: 1996-10-23 00:00:00 UTC
From: mparrott@kendaco.telebyte.com
Message-ID: <54m133$5gc@kendaco.telebyte.com>
Source record: 135339

Selling my Atari TT030 system. Includes:

- TT030 (Rev. H motherboard) with HD "A" drive
- Atari TT RAM daughterboard
- 4 Mb ST RAM, 16 Mb TT RAM
- 48 Mhz CaTTamaran accelerator pre-installed
- 290Mb Maxtor internal HD
- 340Mb Quantum external HD with case/power supply
- Indus GTS-100 720K "B" drive
- Golden Image Handscanner w/scanning tray
- ST Replay sampling cartridge
- SupraFAXModem 14.4 w/Caller ID
- Microsoft Mouse II w/bus-to-Atari mouse adapter,
an original Atari mouse, and Appoint serial mouse pen
- TT030 Keyboard with original Alpha keytops replaced with
STacy keyboard keys - feels great! Will replace with
original Mega-style keys if desired
- Misc. Software, including Atari Works, WordPerfect 4.1,
Breakthru 2 (MIDI), my entire PD/Shareware archive
(over 100 floppy disks!), Laser C, Straight FAX!, & more
- If you need 'em, will also throw in a 25-pin A/B box
or two, some MIDI cables, surge supressor/power center,
lots of floppy disks and a few PC Bus mice. :)

The ONLY problem with this system is that I can't get the (*), (-) and
(Enter) keys on the numberic keypad of the keyboard to respond
consistently, which doesn't bother me because I never use it. I'll try
replacing the rubber "springs" in those keys shortly.

Prefer to sell as a system; will sell items piecemeal only if A) no one
offers to buy the whole enchilada, and B) a buyer can be found for all
parts of the system.

Asking $1600 SHIPPED AND INSURED anywhere in the continental United
States, pre-paid or COD only.

Thanks!

Sorry to interrupt this very good conversation about hooking a quickcam up to the Falcon and such, but no one's answered my question that I started this thread with: Is there any way to send an audio signal (stress the word AUDIO) in real time over the internet, to be used like a simple telephone type device, such as I've heard is available on PC's and Mac's? My fiance lives in Tucson, AZ, whilst I live in Fresno, CA, and we are restricted to communicating over the internet in order to keep the phone bills from making us bankrupt! But we REALLY would like to be able to hear our voices while keeping the phone bills low, and so a friend of mine, forgetting that I had an Atari, suggested getting one of those internet phone packages. So, if there isn't a package like that, being that the Falcon boasts such awesome digital sound handling abilities, I'm sure it probably wouldn't be THAT horendous a task to undertake. If anyone is interested in taking on this project, I would even be willing to discuss reasonalble payment for such software. It would have to be compatible with the PC version of similar software, since my fiance has a PC. Of course, if it's gonna take as long as I'm thinking it will at this point, then I'll be happily married and won't need it by the time it's made. Oh well. It would still be a great addition to the Atari software libraries! Perhaps if it used STiK, MintNet, or other internet packages? Just an idea! I'd like to hear any thoughts!

Can software with a dongle designed for the ST be used on a Falcon,
assuming there are no other issues such as instruction set or timing?
Specifically I am wondering about Notator.

As I understand it, the cartridge port is accessed like memory with addresses
in a certain range, but the addresses are different for the ST and the
Falcon. Is any of this true and if so, can the application be patched to
accomodate the differences?

Not true for some versions of BOOTCONF, I have 1.1 and it not only doesn't reset the NVRAM, but doesn't check for error codes at return of the xbios NVMaccess function. So you can *think* you have changed the settings, even if nothing happened, because the xbios write function doesn't work if the NVRAM checksum is bad (if the NVRAM is corrupted, or if a program has accessed it directly by the hardware addresses without recalculating the checksum).

f> Does anyone know if there is a way to use the Lan port on the Falcon to
f> network with a Macintosh. The original Atari documentation claimed
f> that the port was Localtalk compatible, so I figured some one may have
f> made such a product.

Unfortunately not, the hardware may be used, but there is no software around.
David Small left Spectre GCR project while testing localtalk connection on a
TT but was far to success. I know the megaSTE LAN is not DMA driven like in
TT (and Falcon?) so it wouldn't be useful. There were localtalk-midi boards
for the mega slot, to use midi and network with Spectre Mac emulator, I am
working at an application to transfer files using the serial port (or other
and also PCs) as ST-trans (or Norton Commander -laplink) does, but will take
a lot of time.

A good soultion I tested is to use ppp on serial line on both computers, put
freeppp on the Mac and NOS or MiNTnet on the Atari, then go for ftp, or nfs
if you can.

Well, at a recent Atari show held over here, we managed to get some replacement
Lynx II parts (Joypad membranes, etc.) from a guy called Bradley Koda of Best
Electronics. He was really cool and very helpful. :)

Anyway, I've just found one of his business cards that I picked up, so here's
his address and 'phone no. :

Bradley Koda,
Best Electronics,
2021 The Alameda, Suite 290
San Jose, California 95126.

Phone: (408) 243-6950
Fax: (408) 243-8274

Good luck !

See Ya,
Paz.

Excellent! I still like Geneva the best of all the various AES's I've
used; I only wish it were more stable with MiNT. When can we expect
Release 005 to be made available, and by what means?

MH> whole part ? Should audio parts really be ghost tracks ?
MH> I mean, regular audio parts are almost "ghost" tracks
MH> anyway due to the support for destructive editing.
MH> I use CAF 2.06.

Hi Mikael,
I've never tried to use ghost-audio parts, so I don't know if there may be a bug...
You don't have to make ghost-parts, since the data will be read from the same place on the HD anyway. However, I'm not sure if the waveform data uses more RAM when you make regular copies instead of ghost copies...
The way I've made drumloops is by using the RAM- or Sampler-track. That means the data doesn't have to be read from the HD all the time, since the audio data is located in RAM instead. This has worked fine every time I've used it (if you only have 4MB, it's a little tricky, though).

Best regards,

Claes

From: ccook@icis.on.ca
Message-ID: <846196134_OASIS_@icis.on.ca>
Source record: 135350
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I have installed the complete KGMD package on my Falcon. Before asking for a login, the package does a filesystem check of my minix partition. This process always displays the messages

Checking file system on drive h
Couldn't sync or lock device h:.

The system then verifies the file system and allows me to log in. Any ideas why this happens? Does it matter?

This partition is one of four on an external SCSI.

1369. help falcon broken

Newsgroup: comp.sys.atari.st
Date: 1996-10-23 00:00:00 UTC
From: jklimch@larry.cc.emory.edu
Message-ID: <54mnp3$9km@larry.cc.emory.edu>
Source record: 135351

My falcon just crashed & burned in the middle of a major recording project. the symptoms are a strange noise coming out of the speaker & some sort of line scanning error on the monitor. When I rebooted, I get the message "BAD ROM CRC IN CHIP E". This is followed by a memory check in st low res (I normally boot in high res) then much grinding sounds. Sometimes the desktop appears in low res with no drive indicators at all. (not even floppy drive A).

Any idea of what I could do to fix this? or Anyone got a falcon to sell fast? thank god my STE's still working.

thanks in advance,

David Klimchak

Message-ID: <54lr10$1op@news1.halcyon.com>
Source record: 135353

Do you have old Atari ST computers sitting in your closet that you want to get rid of? Emulators Inc. (formerly Branch Always Software) now accepts computer trade-ins towards the purchase of Gemulator Classic or Gemulator 96. Simply send us your old Atari ST computer in working condition and you will be sent back your choice of a Gemulator Classic emulator for MS-DOS or Gemulator 96 for Windows. You will also receive a Gemulator card with TOS ROMs (either from your original computer or a comparable set). This trade-in offer can save you up to $179.95.

For more info, see the emulation web page at http://www.emulators.com.

All:

I am selling my original condition Atari Mega ST 2.

It comes with a 1224 RGB Monitor and a SH204 20meg hardrive.

It has the original TOS 1.02, keyboard and a 'fresh' mouse. All
in all, its like getting a new system (almost)! The monitor is in great
condition.

I am also selling an ICD FaST drive with a 105meg SCSI drive
built in. Both drives are set to boot and come with its original software.

Best price and location takes it. I live in the bay area, and
someone who would pick it up would get the quickest attention.

1383. Problem running BIGDOS 06 under KAOS 1.4.2

Newsgroup: comp.sys.atari.st
Date: 1996-10-23 00:00:00 UTC
From: kwinter@ludin.com.au
Message-ID: <846042772.806153@hannan.ludin.com.au>
Source record: 135408

Hi all,
I have a very specific problem as mentioned above.
First the system config (that might explain a lot):
1040 STF with 3 MByte of RAM in tower case, two 1.44 Mbyte floppies.
ROM switchable TOS 1.4 - KAOS 1.4.2 (date of KAOS cookie 22.05.1992),
in 512 kByte EPROMS (6).
ICD ADSCSI host adapter with
- Quantum LPS 105 MByte (ACSI 0, Partitions C - F, bootable CBHD 4.57)
- Quantum Fireball 1280 MByte (ACSI 1, Partitions G - Q)
- Syquest 44 Mbyte remov. (ACSI 2, Partitions R,S)
- Toshiba 6,7x CD ROM (ACSI 3, MetaDOS 2.6 for ACSI, GEM drive Z)
- ICD real time clock (ACSI 6).
Boot setup:
15 sec delay (fixed in KAOS EPROM's)
CBHD auto boot from C:
XBOOT 2.52
BIGDOS 06
Meta DOS 2.6
NVDI 2.1
STEP 00 (set FDD's seek rate to 6ms)
TIMESET (ICD clock setting PRG)

ACC's:
NVDICONF.ACC
KAOSCONF.ACC

Auto start program is KAOSDESK.PRG

The problem and steps undertaken so far:
With al the icons on the screen, KAOS desk shows almost immediatley
the message **no internal memory, try to allocate user memory** (all
these messags are in German, as I have a German TOS and KAOS). After
activating some windows, the system says **fatal error - no internal
memory - system halted - use ADDMEM**
Another strange feature is the fact, that KAOSCONF, even started
OK, I used ADDMEM (similar to FOLDRXXX, only for KAOS).
If I put it in the AUTO folder to run before BIGDOS, no error message
is displayed, but I still do have the same problem - no internal
memory. If I put to run after BIGDOS, ADDMEM comes up with the message
wrong KAOS version or no KAOS installed and I still have the same
problem of no internal memory - this time with the English TOS message
No internal memory .... use FOLGERXXX (built into BIGDOS??)

Any comments or questions are welcome, I still hope it is something
easy which I did not think of...

Thanks !!!
Karsten

Playing samples is reasonably simple (on machines with DMA sound capability)
so it does not seem necessary to me to have a TSR or application that can
be activated by the AV protocol to play the sample.

In any case, there already exists SAM, which aims to do exactly what you
suggest. There are standard sounds for actions such as cut, copy, paste,
quit etc. and all an application must do is make a single XBIOS call when
such an action is carried out. In addition, SAM can be used by applications
to play any sample, and SAM also can assign samples to system events such
as alert box, window open/close, keyclick, system bell etc.

I understand that SAM (System Audio Manager) is public domain. It came with
my Falcon030, and I believe I saw it on an ftp site somewhere. You could try
an archie or filez search for it.

>I know I've seen a reference to this drive in "mint.cnf", but I always
>though it was some kind of logical drive within MiNT- what's it doing in
>GEM, and how can I use it/what can I use it for?

It is nothing to do with GEM. Of course you can access it when GEM is
running, but this does not mean it is related to GEM in any way.

U is the "unified filesystem". Here, all the drives on your system are
accessible as folders, and in addition there are some other directories:
dev contains devices; pipe contains pipes; proc contains running processes;
shm contains shared memory.

You will also normally have links in U to bin, etc, tmp, usr, var directories.

When using Unix style software under MiNT, U is the root directory (like "/"
under Unix).

>In addition to that error message I described there's also another (much
>more serious) problem. I can't run any programs by the usual double
>clicking on any .prg .app or whatever.
>Whenever I try to do that GEM seems to interpret the file as a text file
>since it asks me if I want to view it or print it.

Is the file executable? It is possible that although the file has a prg or
app extender, the exeutable permission for you is not set.

>So, as you see I'm having trouble integrating MiNT into my GEM environment,
>and I'd be happy for any feedback concerning the subject.
>As for my setup:

? Your setup seems to have been cut off.

Well, I use MiNT and GEM together every day, so I am sure you will get it
working.

To summarise:

* I cannot imagine why that error about drive D occurs.

* Drive U is like Unix "/".

* Maybe applications will not execute because you do not have execute
permission for them.

1387. Hard Disk for Atari ST 1040

Newsgroup: comp.sys.atari.st
Date: 1996-10-24 00:00:00 UTC
From: Guido Pietrella <pietrella@ftbcc.it>
Message-ID: <326F2A03.70BF@ftbcc.it>
Source record: 135267

Hi everybody

I've got an Atari ST 1040 and I decided to add it a HD...

Does anybody can tell me what kind of Hard Disk is possible to use?
Is it possible to use an IDE HD (PC interface) or a SCSI HD?

Thank you.

Guido

What is the extension? If they are saved as *.neo *.pi? or someother standard atari picture format you should be able to find a conversion program for IBM or Mac. If not, you can use an ST to covert them with imagecopy or something like it.

e> If anyone has any suggestions (apart from get a faster modem) I would
e> appreciate your help.

What kind of places are you ringing that have these problems? BBSs or
internet providers? If it works with 42BBS it ought to work at any other,
but if you're ringing somewhere that requires a SLIP connection you're going
to get nowhere fast.

Any more info you can provide about the problem sites?

I know a couple of Swedish BBSs if you need some numbers... (!)

1391. Crazy ZIP drive on STe

Newsgroup: comp.sys.atari.st
Date: 1996-10-24 00:00:00 UTC
From: lambross@popper.forthnet.gr
Message-ID: <54mnun$khr@info.forthnet.gr>
Source record: 135271

I tried to conect an iomega zip drive to my ste (tos v1.6, 4mb ram)
with an icd pro bootup system and it didn't recognized it.Then i
conected a syquest drive (105 mb cardrige)and it worked fine.
The fanny thing was that when i conected the zip throuhg syquest
it saw it too.It also saw zip when i conected it whith the syqest's
cardrige ejected.It works with any scsi device that's powered on
But when the other device is off st does not see zip.What is the mater
whith it ? By the way do you know any desktop replacement that is
small and good. I use terra v4.0 Also do you know what can i do to run
two programs at the same time and change between them

Thanks
Lambros

I found that if I turn off the "Check Fonts" option (which I found out about
after reading the manual ;-) the errors go away and everything still works
fine.

1394. CD-ROM CDR100 (bus arbitration), access with VM?

Newsgroup: comp.sys.atari.st
Date: 1996-10-24 00:00:00 UTC
From: mbecroft@tos.ak.planet.gen.nz
Message-ID: <GJYRFEUQUp@tos.ak.planet.gen.nz>
Source record: 135274

I have a Yamaha CDR100 4x CD-ROM drive (it is also a CD-Writer).

I am using the Extendos Pro CD-ROM driver to access this drive.

I found that, while Extendos works fine for other drives, it does not work with the CDR100 - it acts as though no drive is connected. The MiNT CD-ROM XFS driver does not work with it either. Neither does Metados.

This is probably because of the SCSI bus arbitration of the CDR100.

Luckily, however, the CD-Writer softare from Bernd Lohrum CD-Service came with a SCSI_CD.BOS file, which allows access to the CDR100 (and apparently other SCSI drives that require SCSI bus arbitration) when used with Extendos or Metados.

This works fine, except that on one of my computers I use virtual memory (VM). Any program that is in VM and tries to access the CD-ROM drive through this driver will not work. I get a "Drive Q is not responding" (Q being the CD-ROM drive) or "Your output device is not receiving data" error, and then the computer's hard disc (as well as the CD-ROM drive) becomes completely unaccessible until a reboot is performed.

This problem occurs with both Outside 3.4 and FreeMiNT 1.14 VM in exactly the same way.

Any ideas as to how to access this CD-ROM drive with VM working would be much appreciated.

>>> pid 4 (GEM): minixfs: Rwabs returned -15 sector 1 drive D:
>>>
>>Your Minix directory is corrupted.

I'm not so sure. Maybe you are right, but seeing as the Minix partition
is E not D, why would the error be referring to drive D?

>But how do I set this manually and what do I enter as values? This sounds
>like a complicated thing to do- and I'm *not* a programmer. I just want the
>thing to work!

I think it's just another option when you run minit. OTOH, I have put
Minix partitions on various hard disc drives and floppy discs and never had
to use this option. It all happened automatically with "minit -V -P -n 2 X:"
where X is the drive being "minited".

>I've got fcsk on my MiNT partition, but I don't know how to use it or
>interpret the messages it gives. By the way, what exactly is "fcsk"?
>A "fixer" program or just something which gives status reports?

It is FileSystem Constency Checker. It will check for errors on a filesystem,
report what they are and allow them to be fixed. I have found that fsck can
recover virtually the whole filesystem from even the worst of errors.

[re. U drive]
>>You can put this on the desktop if you want, just install it like a normal
>>drive. When you do this, you can 'reach' any other drive from U.
>
>I see, but I can't use any of these files can I? Or can I use them if that
>MiNT program is installed in the auto folder, so I can just double click
>and run various UNIX/MiNT applications from GEM?

Drive U only exists when MiNT is running (i.e. installed in the auto folder).

When you access another drive via drive U, it is just the same as accessing it
directly. If you double click on a "UNIX/MiNT" application on drive U, it will
have the same effect as double clicking on it from any other drive.

>I know that I can somehow integrate MiNT programs in GEM using
>"Toswin.acc", but not exactly how, but I can get back to that later when
>I've got those other problems out of the way.

There is no such thing as a "MiNT program".

All Toswin does is let you run "TOS" programs (i.e. any text only program,
normally with a TOS or TTP extender) in a window under GEM. This way you can
keep using other programs while the "TOS" program runs.

Zip drive doesn't supply termination power! You need to have a real hard drive connected or hack a cable and steal power off of someplace like the joyport! It's too late now, but the EZ135 from Syquest is faster, cheaper and has a better warranty!

1402. 1040STE Internal Drive Problems

Newsgroup: comp.sys.atari.st
Date: 1996-10-24 00:00:00 UTC
From: jackee@unix.dsoe.com
Message-ID: <846181359.13289@dejanews.com>
Source record: 135282

I've just bought a 1040STE with 4MB Ram and the unit is upgraded to TOS 2.06(non switchable). The computer cannot seem to read most of the disks I have using its internal drive. Even a lot of the disks that came with the computer have this problem. However, when I use my external drive it will run the programs fine. The external drive is noisier though with the 1040STE than it was with my old 1040ST. I heard that TOS 2.06 changes the drive speed and that a pgm called hd_fdc.prg is needed to adjust the speed of the drives. Can anyone help me with this problem? (by the way, the programs will also run off my harddrive fine also) Thanks in advance.

You'll want SCSI, and a good host adapter. ICD's Link II or Norbert's Link 96
are the two best available; since the Link 96 is made in Europe, and it
supports SCSI bus arbitration, it's probably the best choice for you.

IDE is supposedly possible but I have never actually seen an IDE controller
for the ST.

Have you by chance just performed the CPU timing mod
or any other internal modification to the machine?
I have seen this error and symptom after improperly
installing the CPU timing fix and also attribute the
error to a few cold soldering joints I made during
installation of internal hardware.

Someone knows if the version 1.1 of SAM that came with the Falcon is
the latest? And what with the other little programs of the package, the
latest I have are:

- AFM 1.03
- PROCALC 1.3
- CALAPPT 1.22
- BREAKOUT 1.11
- LANDMINE 1.00

I don't remember what else was included, some stuff for MultiTos like
the talking clock... Speedo... etc...

Bye! Bruno.

1423. FS: Atari TT030 COMPLETE System

Newsgroup: comp.sys.atari.st
Date: 1996-10-24 00:00:00 UTC
From: mparrott@kendaco.telebyte.com
Message-ID: <54pl37$t7d@kendaco.telebyte.com>
Source record: 135303

(This update to my recently posted message adds: 15" color monitor and ICD Link SCSI adapter for the same price, and a better software list.)

Selling my COMPLETE Atari TT030 system. Includes:

- 15" CTX multiscan monitor
- TT030 (Rev. H motherboard) with HD "A" drive
- TT RAM daughterboard
- 4 Mb ST RAM, 16 Mb TT RAM
- 48 Mhz CaTTamaran accelerator
- 290Mb Maxtor internal HD
- 340Mb Quantum external HD, case/p.s.
- ICD Link SCSI host adapter
- Indus GTS-100 720K "B" drive
- Golden Image Handscanner w/scanning tray
- ST Replay sampling cartridge
- SupraFAXModem 14.4 w/Caller ID
- Microsoft Mouse II w/bus mouse adapter
- Original Atari mouse
- Appoint serial mouse pen and driver

- Software: Atari Works, WordPerfect 4.1, Breakthru 2 (MIDI), Laser C, Straight FAX!, XBoot III, Sound Lab, Diamond Back 3, Touch Up 2.5, Data Diet, Invision Elite 2.0, STeno, Gram Slam, Imagecopy 4.0CD, Pagestream w/500+ fonts, Bitmaker, MegaKern, Mountain Reader II, Cardfile 4.06, STalker 3.05, Maxifile, Warp 9, Speed of Light 3.8, lots more!

- If you need 'em, will also throw in a 25-pin A/B box or two (for swapping between printers or modems), some MIDI cables, surge supressor/power center, lots of floppy disks and a few PC Bus mice that work with the included bus mouse adapter.

Prefer to sell as a system; will consider selling piece-meal if the complete system doesn't sell soon.

Asking $1600 SHIPPED AND INSURED anywhere in the continental United States. Will considered offers.

> Any
> ideas why this happens?

A Minix Partition does not AFAIK need to be synced. I get the same
message on My Falcon with an IDE Disk. I don't exactly know what's going
on and why this is, but it is not dangerous.

> Does it matter?

No. This Program is the only one that acesses the particular Partition
at this time. So no lock is needed. The lock is just to prevent other
Processes from acessing the Partition at that time. So fsck can modify
the Partition and make it OK again. This is needed for eventually
damaged Filesystems that fsck can fix.

Oasis (135 or 2) doesn't support PAP.

Mint-net does, if you get upto-date versions of everything (pppd needs to
be a high version). Get the PPP-Pack, as this is fairly new so should have
up to date versions of all software...

Hello everybody,

I've just released v0.4 of my program DuetMagiC. This is a tiny utility that
makes the Duet network run with MagiC. You should find it soon on the
ftp server 'ftp.tu-clausthal.de', the archive name is 'duetmc04.lzh'.

New in v0.4: English resource file and complete English documentation
included. Minor bugfixing. And my address and email are updated.

Please upload it to wherever you feel it might be needed. And if you can't
get it, email me, and I'll mail it to you uuencoded!

Thank you.
Erik.

Aloha,
I have a dead SM124...
I don't know what's wrong with it but here the symptoms...

A fuse keeps blowing...
I replace it, turn it on...
It blows again...

If you want this monitor...it's yours for Free Plus Shipping...
I need the closet space but shutter at the idea of tossing such a
treasure in the trash bin. I'm now using VGA on my Falcon, so I don't
really need the SM124...

Thanks,
Brian

1436. Many Atari FS adds at this URL

Newsgroup: comp.sys.atari.st
Date: 1996-10-25 00:00:00 UTC
From: Michael Grove <mgrove@ridgecrest.ca.us>
Message-ID: <32707802.6C89@ridgecrest.ca.us>
Source record: 135216

In case someone is looking for used Atari
equipment, I thought I would post this URL
for the benifit of all. I recently purchased
Cubase Audio Falcon for $150.00 here. Most of
the adds are for ST's and Megas but you never
know what you will find. There are different
areas to search in, and for Atari look under
personal computers and music areas, electronic
gaming for Jag items. It is a weekly newpaper
in California called the Recycler. I believe
the Web pages are updated on Wednesday nights.
If I remember right it is CAB friendly. If you
have problems with CAB try the anonymizer site
for CAB assistance :).

http://www.recycler.com/

Happy hunting,

Mike

I've been following this since I first heard about it this summer, and to have a thin-ethernet with up-to-date drivers is just about heaven. All three protocols open up new avenues of communication with other comps.

I was trying for a while to get Ghostlink to chug through a few 286's that I have laying around, but my babies weren't quite up to the task. 19200 might have worked in the 8-bit days, but not now, esp. with mammoth sound files to move around.

If the protocols could be used simultaneously that would be amazing, but even if not, the Atari could be the center or at least an integral part of any net of any size.

MIDIcom for the rest of your Ataris, though this wouldn't necessarily need to be part of the adaptor. As long as the remote drives are recognized by the computer with the adaptor, they should be able to be accessed, though only at 31250 (?) baud, maybe faster if MIDIcom compresses..

TCP/IP hopefully could be attached to stik, allowing the ST to browse, exchange files, telnet, etc. on a faster link (sneak it into the office) .. or as part of an intranet!

And if the M$ netBEUI protocol is supported at the time of release, that would be the heart of the artichoke, so to speak. M$ workgroup supports WFW, 95, and DOS, the latter of which is my main concern right now, and you can run workgroup net without going into windows. It doesn't seem like you can actually share drives and whatnot with a TCP/IP stack, or I haven't found the right software. You can do all sorts of client/server business, but I'd rather just have a peer-to-peer for simultaneous computing that I'd only have to set up once, rather than making either the PC or the ST the server, and so on. I'm not sure what options would be available for Mac or other platforms.

Anyway, if fast true drive sharing is possible, any application will be able to work off the other machine in real time. Technological poetry in

motion. CHEAP used and new drives, tape backups, and printers (print support to come eventually) could be installed on the PC with the sole purpose of being used by the ST.

I know what I'm getting for Christmas. Of course, if the device has yet to be FCC approved before distribution, we in the states may have to wait until next season >sniff!< unless we can bribe somebody or get one of the fellows on the Continent to ship one over.

If I'm mistaken about my views on the protocols or possibilities here, please shoot it down so I don't go believing in myths that have no basis in fact.

Message-ID: <846228012.24819@dejanews.com>
Source record: 135219

Hello Atarians,

How would you like to connect to almost all http's, ftp's, etc. within CAB with out bombs, crashes or the dreaded Runtime 163 Error? Well, now you can! How? By using the ANONYMIZER! This is a free service that allows you to just type in the URL that you want. Here's how:

http://www.anonymizer.com (Web page)
http://www.anonymizer.com/open.html (to just type in *ANY* URL)
http://www.anonymizer.com:8080/ftp://ftp.cnam.fr/pub/Atari (Direct)

If there are Web pages or ftp sites you are having trouble connecting to, try the ANONYMIZER. You'll thank me later :-))

" Who is that Masked Man "? It ain't the LONE RANGER!!

I'm using the new CAB1.41/STiK1.11 with the older CAB.OVL1.18 because the new OVL(1.20h) doesn't like the esc key.

C'est la Vie,

Charles Silver

On MagiC PC?...Not a sausage :(, not even able to run the software
itself,
On Gemulator96 Demo4.50 + Magic 4.1 I am running

CAB:To test me web pages are ATARI compat'
EVEREST:
CANVAS: At Last ATARI in High res:)
KIVI: Because I am used to it,
IMAGCOPY4:
HIGHSOFT BASIC: But this only works if not multitasking
TERRADESKTOP: I tried THING, but it always caused a not enough memory
. error when trying to open a window?
NVDI 2.11 :Without mouse accelerator because that was silly,
SCELETRIC:Because it handles Long file names,and works in medium or .
. high rez, unlike other selectors i could name?

I will be going for Gemulator with rom board, because STOS does
definatly work on that :)

>> Ho well...saving up to buy the full Gemulator.....that impressed :)
>
>Another thing I missed through turning up late I bet!

Well they where selling the gemulator at the show, but I hadnt tried
the demo at that point,
However, the signs are...(pretty sure it will happen) there will be
another show in Birmingham next April, organised by Mike Goodman again
:), and a bigger hall this time, If a London show then would be at a
different site,

p > HD?

in your case, the only route to go is with a SCSI connection
scheme (using a host adaptor like the ICD Link II, the TopLink, and
others). However, you'll also get all the advantages that SCSI has
to offer, including faster thruput and the ability to have up to
seven SCSI devices chained together.

l > terra v4.0 Also do you know what can i do to run two programs
l > at the same time and change between them

what you've run into is the non-standard way IoMega has wired
the SCSI ports on the ZIP Drive - apparently it doesn't provide
power through the cable. I take it you are using your STe with an
ICD Link - if so, the Link actually gets the power to run from the
attached standard SCSI device through the cable. When you run
another standard device along with the ZIP, the problem disappears.
I heard that HiSoft was supposed to have a solution to this - until
then, it might be best to make sure you have other devices along
with the ZIP to make sure it works.

Hmmm... the version I got with my Falcon works fine on my Mega STe - perhaps
it's a TOS version thing???

I'll try to dig out my STe over the weekend, and give it a go on that.

Cheers,

Xav

Given that pre-STe machines have no DMA sound, the best you could hope for
is a poorish sample playback which will also slow down the rest of the
machine a bit. In my view, it's probably not worth the hassle.

Even if you decide it is, the ST code would add unnecessary bulk to
the program for STe users or above - so separate versions would be best.

Whilst you're doing separate versions, why not just implement what would
effectively be an ST version of SAM? I.e. with the SAM programmer's
interface.

Cheers,

Xav

Just a shot in the dark, but check the horizontal output transistor to ground. It should be located near the rear of the chassis near the flyback xfmr. If it shorts, it blows the fuse. Looks like an oblong plate with a disk in the middle. should be made of metal. Hope that helps. and also, don't flame me if I am completely wrong! Never had one apart but have repaired plenty of t.v.'s with the same problem. Later.....j

Oh, there's gotta be about a dozen of them at this point. The original
(as far as I know) is Nick Flinthams' Stic Stuff Page at

http://www.flinny.demon.co.uk/

There is at least one US mirror maintained by the Yolo Atari Club at:

http://virtual-markets.net/vme/yac/

And then there are a bunch of other mirrors that I haven't checked
recently, so I don't know how up to date they are, but am sure most of
them now have all the latest versions.

For those that like the old CAB.OVL better, the YAC site still has a copy
of it available at the above address.

I have it though I directly got if from the German developer Norbert
Wieczorek. There is nothing much to comment on it. It simply works and
it's the only host adapter that allows drives that need initiator
identification (e.g. Quantum Fireball) to be used with the ST.

I hate it when things that have worked fine forever quit working!
I've been using STorm in VT100 emulation mode to connect to our local ISP through a shell account.

They have a catalog file available on-line which I occasionally check for prices. Well, a few days ago they changed things. Instead of getting the ASCII file, it's now a direct link to a web site. As soon as I accessed this, the screen displayed garbled characters. So, I disconnected and called back. Now even the normal VT100 screens have mostly non-ASCII characters. Even if I call my own BBS, what should be ASCII is non-ASCII.

It seems somehow that the VT100 emulation has been messed up! Is this possible? I checked the emulation settings and none of the options look pertinent to this problem. I also checked the "mask high bit" option in the serial port menu and it is still selected. Any ideas on how to fix this???

Maybe the ISP thinks I'm in ANSI now rather than VT100???

Well, I was planning on having the ST replay take over the proccessor,
better than nothin'. Since I own only an ST :P I'm quite familiar with
its sound capability, thank you...

> Even if you decide it is, the ST code would add unnecessary bulk to
> the program for STe users or above - so separate versions would be best.

The replay code that came with my Replay4 cart compiles to just under 3k,
I don't think saving 3k of space is worth the trouble of seperate
versions. Keep in mind the code is called *many* times a second. It *has*
to be tiny...

I was just about to ask about this. KGMD does the exact same thing on my
MegaST. It also says "(reboot after running)" and then later on
"Automatic reboot in progress", huh? Didn't look like a reboot to me! :)

1467. GEMulator incompatibilities

Newsgroup: comp.sys.atari.st
Date: 1996-10-26 00:00:00 UTC
From: cronos@worldaccess.nl
Message-ID: <N.102696.181712.59@wxs4-16.worldaccess.nl>
Source record: 135164

I recently got GEMulator and I ran into a few problemmettes...

1) ST Zip won't work. It cannot write (deflate) anything, it gets write errors or something on the hard disk.

2) I tried to copy a disk using FastCopy Pro 1.02. The source disk had a readable directory and several folders. Although FCopy appeared to work (though the writing process was very slow), the target disk turned out having 0 bytes used in 0 files, and no folders either.

3) Kobold won't work. I kinda guessed it wouldn't, but hey. Or does anyone have any suggestions?

4) Some disks I have are Atari-format, not properly DOS-compatible. I understand there are quite a few programs available to alleviate this problem by making the bootsector MS-DOS compatible. Can someone perhaps mail me a program that does this? Exactly what does an MS-DOS bootsector have to have to be readable by DOS?

Question to Dan Mihocka (hope I got your name right there): Can I use XBIOS functions to read the bootsector of a disk that isn't MS-DOS compatible?

k> 1040 STF with 3 MByte of RAM in tower case,

Just a thought, Karsten.

How do you get the 3Mb? Is it by using the "bank-expander" circuit (I forget who designed it now).

I made one of these and got intermittent memory failures because of the delay introduced into the memory cycle by the extra electronics. I wonder whether your trouble is coming from intermittent memory.

Is there any way you can revert to the standard 2.5Mb (just using banks 0 and 1), to se if this is more stable.

I'm afraid that because of the trouble the "bank-expander" was giving me I had to abandon it.

p>
p> Does anybody can tell me what kind of Hard Disk is possible to use?
p> Is it possible to use an IDE HD (PC interface) or a SCSI HD?

The usual method is to attach a SCSI drive via an interface card to the DMA port.

You can find these around second-hand quite cheaply. In a steel box you get power-supply, interface board and SCSI drive. Once you have the interface board you can chain up to 7 SCSI devices (including CD-ROM, scanners) to i

If you want to put it all together yourself the interface board is the most important thing to look for. There are a lot of ICD AdSCSI+, and Link interfaces about.

Hi,

I'm asking a question for a friend who has an Atari 800XL and Atari 1040ST.
He also has a 486DX33 and wants to know if there is any software that will allow him to READ and WRITE to the Atari formatted disk with the IBM. I've heard of a program (some years ago) that is supposed to be able to allow this process between formats but have never seen it... so don't know how true this is either.

I've managed to help him a little by explaining how to change the first 3 bytes of the Atari ST formatted disks (make them EB 34 90). However, if there is anything quicker, we'd appreciate knowing.

ALSO... we'd like to know if there's something which will read the old Atari 800XL disks (5.25").

Any and all comments, replies, etc will be appreciated.

Thank you.

From: Lonnie McClure <lmcclure@delphi.com>
Message-ID: <h5PQvkK.lmcclure@delphi.com>
Source record: 135247

Another possible cause of this problem is a shorted diode (one of the four in a diamond-shaped pattern) on the power board.
-
Way back in the late 80's, an SM124 of mine had this exact problem. I replaced all four diodes with beefier units, and the last I knew, it was still glowing along (sold it earlier this year, after getting a VGA for my Falcon).

I have an Atari Stacey I'm selling for Parts, to be sold for parts. Not to be repaired. If you wan't to try to buy it to try to repair it? I'd advise against it. It is one of the first ones off the Assembly Line, without batteries. It's Switching Power Supply has been tested & works fine. The Stacey Switching Power Supply can Run in the U.S. or Europe on 110 or 220 Volt. These Power Supplies Regularly sell for $100 U.S. The Stacey without the Power Supply goes for $175 U.S. Dollars. Stacey with Power Supply goes for $250 U.S. The Power Supply won't be available for sale until after the Stacey is sold. Unless, of course, It's sold with the Stacey. It's a 4 MB Stacey with Hard Drive. Please direct all Replies Through E-Mail to: bensmith@teleport.com or call Ben at (503)256-9974.

There *is* a Freeware emulator. It requires that you are running X-windows
(i.e. Linux and XFree86). What the merits of the various programs are, I'm
not going to get into. Try http://www.complang.tuwien.ac.at/nino/stemu.html.

Usenet is an imperfect system. Articles posted at one news server are
then copied to the next server, and the next, and the next, ... or
maybe
not. The better providers brag that they get "multiple feeds" or news
from a bunch of different sources, so that any dropped articles would
hopefully show up in another feed.

My wierd thing with Tin is to read the start of a thread that is
actually
a reply to the original message, which shows up later in the thread as
a
followup to the first message. My life is full of such miniature
disorienting paradoxes. Not that I'm complaining.

1491. OASIS dialing script -how to send CR at login

Newsgroup: comp.sys.atari.st
Date: 1996-10-26 00:00:00 UTC
From: akisujar@leonis.nus.sg
Message-ID: <54robj$j2p@nuscc.nus.sg>
Source record: 135257

Hello from Singapore,

Could not get STiK and CAB to work with my Host (my host only has ppp and CSLIP), I have to use OASIS instead.

How ever my host requires my computer to send CR twice when first login then after keying in user name and password it requires 3 more CR before I can type in ppp to get in.

I put in the "\r" for each CR as mentioned in the instruction but it did not work. Apparently if I enter dialing script with OASIS_EDIT it will clear these \r after saving (perhaps due to no "receive" line before I send the \r). I have to use word processor program to edit the dialing script.

I also trying to logon with ICE manually without using the dialing script but I get 2 bombs after the modem finished dialing before I get a chance to key in anything.

Any advice would be much appreciated.

Hi,

Long time since I was here last...

Barrie is looking for second user Atari hardware, broken
(Mega)ST(e)/TTs, monitors, midiports etc.

He particularly needs some Megafiles, SCSI links and (original)
copies of Cubase 2+, NVDI2.5+ and Notator.

Ring Barrie in Warrington, UK (01925) 266120
or email barrie@atamusic.u-net.com (But don't hold your breath)

If you want upgrades/repairs or new stuff it's worth noting this
number...

Cheers,
Simon.

Due to the constant updating of this sig, I am reposting this information regarding the "Break Movie Warehouse";

http://www.flash.net/~ambrosia/

a site dedicated to text based animations. Many Atascii (8bit) and IGS (ST) files are available for free download, including viewer software and links to emulators.

Our site is in desperate need of Movie contributions. If you have any old text movies (any platform, including RIP and VT100), or you're just looking for fun, please drop by.

This site looks best when viewed using Netscape 2.x and above, though any browser should do.

See you there. Tom D'Ambrosio

From: htrembl@CAM.ORG
Message-ID: <5508p3$5vd@stratus.CAM.ORG>
Source record: 135113

What is the best way to browse the Web with an Atari ST (1040 STFM)? I have tried WWW131.ZIP with Stick and all, but after several hours I gave up. I can get a connection, but the pages are not downloaded to my machine. It acts as connecting but then my screen is blank when it shows 'done'.

What is Kaq9? Is it an alternative to WWW?

I also have Spectre. Would it be easier to use the Mac?

thanks for all help.

1500. Atari books for sale

Newsgroup: comp.sys.atari.st
Date: 1996-10-27 00:00:00 UTC
From: cronos@worldaccess.nl
Message-ID: <N.102896.000317.12@wxs3-16.worldaccess.nl>
Source record: 135116

A while ago I mentioned that I had several books for sale, but I didn't really know which ones. Well...

Books in German:

Atari ST/STE/TT Profibuch (Sybex) THE programming bible, in mint condition. Asking price 25 Dutch guilders or 25 German marks.

Das Buch Zum Atari Falcon 030 (Data Becker). Asking price 10 Dutch guilders or 10 German marks.

Das Grosse ST Viren Schutzpakket (Data Becker) Originally with disk, but I haven't got that anymore. Asking price 10 Dutch guilders or 10 German marks.

GfA Basic (book by Frank Ostrowski, including disk). 10 Dutch guilders or 10 German marks.

GfA Handbuch TOS & GEM (GfA Systemtechnik). 10 Dutch guilders or 10 German marks.

Atari ST Floppy und Hard disk (excellent book, Data Becker, hardcover). 20 Dutch guilders or 20 German marks.

Das Grosse GfA Basic Buch (Data Becker, hard cover). 15 Dutch guilders or 15 German marks.

Scheibenkleister II (by Claus Brod, THE mass storage media bible, with disk). 20 Dutch guilders or 20 German marks.

Book in Dutch:

Programmeren van Basic naar C (Data Becker). 10 Dutch guilders.

If you're interested, please email me with an offer (please also mention the country where you live, so I can estimate the postage costs). All prices mentioned above are without postage.

Nothing in the Mac platform compairs to the Apex line of software.
It's that simple. There is no decent Mac video or audio applications.

>
> Mike

Another note, both SCSI Tool and HD Driver would
partition the IDE disk ok, but SCSI Tool nor
HD Driver 5.3x could format it. My main purpose
was to make transfering large files from and to
my Mac easier. After partitioning with SCSI Tool
and HD Driver, MagiC did not recognize the drive
as an AHDI formatted disk. Soooo, to my sons room
where the box stock Falcon sits. I connected my
SCSI EZ 135 to the machine and formatted the
cart's with HDX 5.04. Bingo. There are readable
on both a SCSI or IDE EZ 135 and MagiC can utilize
them as well.

Only on an Atari :)

Mike

In the Options - server menu item you should have your SMTP and NNTP servers addresses set up. If you click on default, they appear but the prog won't use them unless you then save the preferences - I made the error of assuming once they were up in default they woyuld be automatically used, but not so.

I had no probs after that. Best of luck.

There is a German program called Disklist but it does the same as long
as the disks don't have a volume name.

You can change the serial number to random by using UNEEKIT.TOS

Hi,

>> C:\FONTS\TTF\S11N.TTF: file damaged!
>> (head: 61cb4274 != 64913fae)
>It is mean that You have a Windows 3.xx truetype fonts.
>The Win fonts have other fileformat than normal truetype,
>and must be converted to normal format.

No. It means that the file is damaged.

Closer:
The ttf-format is organised in chunks(tables).
Each chunk has an absolute adress and a header, that describes the
length of the chunk (and more).

In this case, the length of a chunk and the adress of the next chunk
don't fit together.

This fonts are created with buggy software.

You can tell NVDI not to check the fonts or you can repair it.

Regards,
Gerd

1513. Emailing Online in Cab

l> But when the other device is off st does not see zip.What is the
There's nothing wrong with your Zip drive from what you say, it sounds like your host adaptor (you don't say what it is, but I assume that it is an ICD Link) isn't receiving power from the SCSI bus from the Zip drive, but is powered when you switch the Syquest on.

l> mater whith it ? By the way do you know any desktop replacement that
l> is small and good. I use terra v4.0 Also do you know what can i do to
Teradesk is quite good IMO.

l> run two programs at the same time and change between them
You probably need MagiC, which will allow you to multitask as many progs as you have memory for, you will need to use either its own desktop or other multitasking-aware one like Thing.

Speak to 'ya later!

1519. EZ 135 IDE on Falcon

Newsgroup: comp.sys.atari.st
Date: 1996-10-27 00:00:00 UTC
From: Michael Grove <mgrove@ridgecrest.ca.us>
Message-ID: <32734655.235F@ridgecrest.ca.us>
Source record: 135182

Just thought I would post this information in case
anyone is thinking of doing the same.
I installed an IDE EZ 135 in my Falcon along with
the existing Maxtor 1.6 EIDE drive and all works
great. I didn't see the transfer rates I had hoped
for. The Maxtor runs at around 3.2mb/sec and the
EZ didn't fare any better than 1.4mb/sec. I think
that is better than advertised, but didn't see the
burst rate they are advertised. I used
HD Driver 5.XX to partition the disk. No need to
format it. The EZ was set as the slave.

Well, I had trouble with this too over the summer. I think the problem is
the desktop sends the command line to programs in CAPS - now you'll notice
that -d and -D do different things!!!

The answer is to find a CLI utility which should sort the problem out for
you - If you used to collect STF, there was one included in the POV-Ray
distribution they put on their cover disk....

Good luck - and one final thing: When I did get it to work COMPRESS.TTP
crashed on my Falcon :(

If you really can't wait to get your hands on it, buy the german version, even there is (still) no translation:

(1) The installation is very simple: you'll get a Mac-Disc with a special number including an installation-program. Calling this program from the MAC-SIde, you will have to insert your name and the number, and the rest will have been done.

(2) You can set up some preferences about the memory, the screen and your virtual diskstations and so on. It's not difficult.

(3) On the ATARI-Side it's nearly the same as an ATARI.

And if you need help, you will it find here, not only by me.

Is it included within a package of other programs then? I tried searching
for "nohog" and "nohogg" but found nothing.
The TAF setup which I used certainly has Minixfs which it installs on the
harddisk partition, but I didn't find any "nohog.acc" there...

>> I have a line which goes like this:
>>

Okay, I've changed it now, but it still doesn't change anything- probably
due to the error above. Perhaps nohog.acc is the solution.

>> (I've also tried "\etc\syslogd" which you mention, but I'm sure it should

>an older/newer MiNT.

I'm using TOS 2.06 and version 6.5.5 of the ICD harddisk driver which came
with "The Link II" SCSI adaptor.
I'm not sure which version of MiNT I have, I'll check next time I boot up
with it, but it said something about "NH-MiNT" or something like that,
which apparently is a patched version of the original MiNT. As I mentioned
earlier I've been using the "TAF" (Toronto Atari Federation) distribution.
I read about KGMD everywhere- is this a "better" distribution? Should I
download and install this instead? I'm not too keen on downloading several
MBytes of data again, possibly just downloading the same thing again...

>> Now, are there size limits to partitions in MiNT? Someone else here said

>introduced by the driver. You should try CBHD, Hushi or HD-Driver.

I've tried CBHD and AHDI- they're a pain to install, so I gave up. ICD
works great! No problems at all. I think the later versions of ICD's
software should be okay (or so I've heard).
I've now reformatted/repartitioned the whole drive and made it AHDI
compatible (there's an option for that in the ICDformat program).
So after all of this trouble I hope the soultion is nohog.acc as you
mentioned. Now, if I could only find it....

>running, but this does not mean it is related to GEM in any way.

Okay.

>U is the "unified filesystem". Here, all the drives on your system are
>accessible as folders, and in addition there are some other directories:
>dev contains devices; pipe contains pipes; proc contains running processes;
>shm contains shared memory.
>

>under Unix).

I see.

>>In addition to that error message I described there's also another (much
>>more serious) problem. I can't run any programs by the usual double
>>clicking on any .prg .app or whatever.
>>Whenever I try to do that GEM seems to interpret the file as a text file
>>since it asks me if I want to view it or print it.
>
>Is the file executable? It is possible that although the file has a prg or

>app extender, the exeutable permission for you is not set.

Huh? Do you mean that I need to do a "chmod u+x ....prg" for each .app or
.prg on my harddisk?
By the way, it's not just _a_ file- it's all programs. None of them work by
double clicking.

>>So, as you see I'm having trouble integrating MiNT into my GEM environment,
>>and I'd be happy for any feedback concerning the subject.
>>As for my setup:
>
>? Your setup seems to have been cut off.

Sure does :-(

>Well, I use MiNT and GEM together every day, so I am sure you will get it
>working.
>
>To summarise:
>
>* I cannot imagine why that error about drive D occurs.
>
>* Drive U is like Unix "/".
>
>* Maybe applications will not execute because you do not have execute
>permission for them.

Would you mind telling me how big partitions you have on your setup?
By the way, what kind of MiNT distribution did you use? I've installed the
"TAF" distribution... anyone had any similar problems with TAF like I have,
and have they been resolved using KGMD?

1527. GEMulator and XBoot

Newsgroup: comp.sys.atari.st
Date: 1996-10-27 00:00:00 UTC
From: cronos@worldaccess.nl
Message-ID: <N.102796.155846.32@wxs7-11.worldaccess.nl>
Source record: 135190

XBoot doesn't seem to want to work under GEMulator. What to do? Folders are displkayed twice using its file selector, and when I try to write a set it can't find the path (even though C:\XBOOT\ has been created).

Similarly, Freedom only seems to want to install as accessory?

1532. A pot of gold under the Rainbow (INTERESTING!!)

Newsgroup: comp.sys.atari.st
Date: 1996-10-27 00:00:00 UTC
From: cronos@worldaccess.nl
Message-ID: <N.102796.155858.62@wxs7-11.worldaccess.nl>
Source record: 135195

Right. I have switched to the PC and will only be retaining various titles
from my Atari software collection insofar as they work on the GEMulator.
Financial reasons have kind of forced me to sell the Falcon, so I will
basically be selling stuff that only works on the Falcon. Ever since I got the
Falcon and sold my MEGA ST, I've been having a lot of ST-specific titles
(games) sitting around that I will also put up for sale here.
Specs follow below. ALL THESE TITLES ARE ORIGINALS, PRE-PROD COPIES, OR
EVALUATION COPIES. NO PIRATE COPIES. Swap offers not welcome.

FIRST CATEGORY: GAMES FOR ST, WITHOUT MANUAL, WITHOUT BOX

Airball
Airball Construction Kit
Arena (2 disks, Psygnosis)
Arkanoid (Imagine/Ocean)
Backlash (Paul Woakes, Novagen)
Barbarian (2 disks, Psygnosis)
Black Lamp (Firebird)
Blood Money (2 disks, Psygnosis, bloody excellent game)
Brattacas (Psygnosis, classic hi/med res game)
Bubble Bobble (disk will handled, was my absolute fave game)
Chaos Engine (2 disks, disks patched for use on Falcon, can't press any keys
until the game starts or it won't work; don't know if it still works on the ST)
Deep Space (2 disks, Psygnosis)
Defender II (ARC/Atari, by Jeff Minter, classic game, but difficult to play)
Dragonflight (Thalion, 2 disks, double-sided drive required)
Dungeon Master
Enchanted Land (Thalion)
Extensor 3.3 (Tron-like game, monochrome only, by Golden Games, ancient)
Gods (superb game, two disks, by Bitmap Brothers)
Goldrunner II (boot/game disk plus data disk, by Microdeal)
Goldrunner II Pete Lyon data disk
Goldrunner II some other guy official data disk
Gridrunner by Llamasoft, excellent game by Jeff Minter
Hitchhiker's Guide to the Galaxy, the original Infocom adventure (alas, no
gadgets anymore, I lost 'em all)
Jambala, the Seven Gates of (Thalion, DS disk version)
James Pond (by Steve Bak, Millenium Software, preview copy, but is a full one)
Jupiter Probe (legendary Steve Bak shoot-em-'up with Rob Hubbard Music)
The Killing Game Show (Psygnosis, 2 disks)
Leatherneck (Microdeal shoot-em-up, really cool, have to disconnect printer to
get it to work, does not work on Falcon, alas)
Lemmings (need I say more?)

Oh No! More Lemmings
Lemmings 2
Lethal XCess (absolutely great shoot-em-up from the author of Wings of Death, by Eclipse, 2 disks)
Little Computer People (Activision, really cute game)
Magic Pockets (great Bitmap Brothers game, one disk)
Monster Business (platform game, Eclipse design)
Nebulus (John Phillips excellent game)
Obliterator (2 disks, Psygnosis)
Photon Storm (hellishly difficult Jeff Minter game)
Prehistoric Tale (Thalion game, coded by The Lost Boys, platform thing)
Return to Genesis (the first true horizontal smooth scrolling shoot-em-up by Steve Bak, excellent graphics, great game)
Revenge of the Mutant Camels, registered version for 1 Mb ST
Rick Dangerous (pre-prod copy, looks dodgy but is full version, and legal too. Heavily used, was one of my fave games)
Rick Dangerous II
The Sentinel (legendary Firebird game with 10000 levels or whatever)
Shaolin, Chambers of (Thalion, Martial arts game, 2 disks)
International Soccer (Microdeal, I think it's the best soccer game ever on the ST)
Spaceport (like Fort Apocalypse on the C-64, great concept, dodgily programmed)
Starglider (the legendary Jez San game)
ST Karate (great graphics, old karate game by Paradox)
Stone Age (really nice puzzle game by Eclipse, excellent graphics, DOUBLE FORMAT, WORKS ON ST AS WELL AS AMIGA!!)
Teramis, Leavin' (vertical scroller, shooting about spaceship, Thalion game)
Terrorpods (2 disks, graphically impressive, Psygnosis)
Virus (legendary David Braben 3D game, by Firebird, doesn't work on all disk drives (sometimes you have to press the 'eject' button lightly)
Warhawk (budgetware shoot-em-up by Silverbird, with Rob Hubbard music)
War in Middle Earth (RPG "Lord of the Rings", *really* impressive, 3 disks, Melbourne House)
Warp (nice Thalion shoot-em-up)
Wings of Death (great 2 disk shoot-em-up, by Thalion)

COSTS: Remember, no manuals and packaging. All I'll be sending you is the disks. I am selling all this stuff at 2.5 British pounds per disk. Refer to the end of this text for more details.

SECOND CATEGORY: UTILITIES

These are sold without manuals either, unless specified. All original stuff, no pirate stuff.

1st Word Plus, 3.20 TT (2 disks) *
Crypt It (old Tommy Software encryption thing)
Degas Elite (Batteries Included) *
Diamond Edge, version 1.x *
Diamond Edge, the latest version 2 ** (with manual) SOLD

Diamond Back 3 ** (with manual)
Ed Hak (editor) *
FastCopy Pro 1.2 * (works on Falcon)
G.I.S.T. the Sound Tool
Desktop Butler James *
Imagecopy 2 * (2 disks)
Imagecopy 3 ** (3 disks)
Imagecopy 4 ** (2 disks) (with manual)
K-Rhyme (rhyming accessory) *
Mortimer (desk thing by Omikron)
Mortimer Plus * (see above)
Mouse Tricks 2 *
Protext 5 ** (4 disks, I might be able to find the manual)
Le Redacteur ** (4 disks)
Spectrum 512 * (512 colour drawing program, ST only)
Turbo ST (screen speeder, ST only)
Universal Item Selector III
View II * (by DMJ software, good stuff)
Warp 9 ** (3 disks, version 3.81, best for ST)
Xboot 3.10 *

COSTS: The regular ones cost 2.5 English pounds per disk. Titles with one *
cost 5 English pounds. Titles with two ** cost 10 English pounds extra. If you
want the manual sent, that will count as one normal disk (2.5 pounds).

Examples:

Protext costs (4 disks plus double extra = 4 * 2.5 + 10) 20 English pounds
without manual. With manual, it costs 22.5.

Imagecopy 3 costs (3 normal disks plus double extra = 3 * 2.5 + 10)

Fastcopy Pro 1.2 costs (1 disk plus extra = 2.5 plus 5) 7.5 pounds.

THIRD (AND LAST) CATEGORY: DEMOS.

This is basically a collection of demos that I have. The price varies per
demo, and is given for each title. The price specified is in British pounds, so
if you want to make another currency of it, check the "additional payment
details", below. All demos are ST only!
!! These demos can only be fill-up orders, or orders if you have ordered more
than 10 British pounds worth of the first and second category !!

BIG Demo (with handwritten text by ES of TEX, ST only) price: 2
Amiga Demo (ST only): 1
California Beach Girls (fantastic monochrome slide show of girls by the Denise
Team. Classic old demo, requires DS disk drive, monochrome only!): 1
Thalion Sound Demo (a copy-protected rare Thalion sound demo, done in 1988,
with Mad Max music. Never officially released. You can't put this in a PD
library because it's copy-protected!): 2
FNIL (large DS disk drive demo by TNT crew): 1

DEF Demo (1 meg version of the first TLB demo, with hand-written label by Tim of the Lost Boys himself!): 2
TCB New Year's Demo: 1
Union Demo: 1
Cuddly Demos: With hand-written stuff by Nic of TCB: 2
Whattaheck Demo: With hand-written stuff by NIC of TCB: 2
Decade Demo by Inner Circle: With hand-written stuff by Griff of Inner Circle, final version of 12 sep 1990, STE compatible: 2
Syntax Terror Demo (megademo by Delta Force, compiled, made, finished and copies at the ST NEWS International Christmas Coding Convention in 1990, signed by New Mode, Slime and Chaos Inc. of DF!!): 7.5 *****
European Demos: (megademo of Overlanders, 2 disks, also finished and copied at the STNICCC in 1990, signed by all members of Overlanders): 8 *****
Dark Side of the Spoon (by ULM, megademo, with custom ULM label): 2
Lightning Demo (by pendragons, with handwritten label by pendragons): 2
Punish Your Machine (two disk demo, excellent, by Delta Force): 4
Ultimate Muzak Demo (by PHF), volumes I through V, five disks, only sold as a set, all with hand-written labels by Grazey of PHF: All five for 8
Ooh Crikey Wot a Scorcher (TLB megademo, excellent, signed by all members of TLB plus other participants such as Oxygene, Tyrem, Fury, Hawkmoon and Tanis of TCB!): 7.5 *****
Ventura Demo (2 disks, I think it's by ST Connextion, with hand-written labels by them): 4
Reality is a Lie: 1
Black and White: Rare Polish megademo, with hand-written stuff and pix by them on label: 2.
Colorz: By Haemaroids, hand-written label by them: 2.
Froggies over the Fence: Three disk "last of the true megademos", released september 1993, with custom Overlanders "Froggies over the Fence" graphic labels": 8 for all three disks.
Bedlam demo by Chaos: 1
Never + Forever Demo by STEW, GfA Basic megademo: 1
The Beginning of the Ending demo by Flexichron: Handwritten label by Offbase of Flexichron: 2

The demos with ***** are kindof special to me, and I am not very keen on selling them because they're signed by old friends and all. So the prices are "STARTING BIDS", meaning that you can bid on them. The person who makes the highest offer gets them.

- READ THE BITS BELOW!! READ THE BITS BELOW!! ------------------------------

ADDITIONAL PAYMENT DETAILS:

I would like people in Europe to pay in British pounds or German marks (German marks = British pounds multiplied by three). People from the Netherlands can pay in Dutch guilders (British pounds multiplied by three). I have to request people outside Europe have to pay in American dollars (British pounds multiplied by 2). No cheques, just cash or International Money Orders from the post office.
I don't like to receive any coins, so if you order for 7.5 or 12.5 pounds (or

whatever other currency) then please pick another title and make sure the total amount is divisible by 5 (INT(x/5)=x/5). If you pay with Dutch guilders or German marks, make sure the amount is divisible by 10. If you pay in dollars, simply round off the amount to the next whole dollar and use US$ 1 bills.

GUARENTEE

I can't give any guarentees. Some of the games are old, and some of them have been sitting in my disk boxes for quite a while. All ST-specific titles have not been played since 1993 or so. I am not out to rip anyone off. I have been doing "ST NEWS" and have been doing (and will be doing) "Ultimate Virus Killer" for quite some time and I hope people know that I can be trusted.

WANT SOME?

Email your order and WAIT FOR CONFIRMATION (DON'T SEND ANY MONEY YET). The quickest mailer gets the first right on a given title. I'll mail back to confirm and then you can send off the dosh. I will despatch the disks by return mail.

If you have any further questions, please just email me.

1533. GEMulator and Geneva

Newsgroup: comp.sys.atari.st
Date: 1996-10-27 00:00:00 UTC
From: cronos@worldaccess.nl
Message-ID: <N.102796.174229.43@wxs1-12.worldaccess.nl>
Source record: 135196

I tried installing Geneva and Neodesk 4 on the GEMulator. Neo4 seems to work just fine, though I haven't yet tested everything. Installing Geneva goes fairly OK, but it can't use Neo4 at the same time. I think the problem is the following: To autoboot Neo4 from Geneva (as a shell),Geneva has to read the specs from GEM.CNF. And the GEM.CNF is always 0 bytes after installing it on GEMulator...

1534. Wanted - file scrubber

Newsgroup: comp.sys.atari.st
Date: 1996-10-27 00:00:00 UTC
From: dave@mbha.demon.co.uk
Message-ID: <961027Z172328.176dave@mbha.demon.co.uk>
Source record: 135197

Greetings all,

Some time ago I am sure I saw a utility which deletes files by overwriting them with garbage, hence making them non-recoverable.

Do you think I can remember the name? Nah, of course I can't :-(

Can anyone help? It needs to work on hard disks as well as floppies.

Thanks in advance for any help...

Message-ID: <550ahj$vr@due.unit.no>
Source record: 135202

Hallvard Tangeraas (hallvart@sn.no) wrote:

> Is it included within a package of other programs then? I tried searching
> for "nohog" and "nohogg" but found nothing.
> The TAF setup which I used certainly has Minixfs which it installs on the
> harddisk partition, but I didn't find any "nohog.acc" there...

It's been a while since I downloaded minixfs, and I lost the archive in
my last harddisk-crash. I'm 100% sure that NOHOG.ACC is included in the
MiNTnet-distribution, so get net-1.01b.tgz (or .tar.gz) from ftp.fu-berlin.de

> I'm using TOS 2.06 and version 6.5.5 of the ICD harddisk driver which came
> with "The Link II" SCSI adaptor.

Arghh! Do _not_ use 6.5.5 with MinixFS! It won't work! It messed up
my IDE (I have a Falcon) big-time when I tried it. PLease, _please_ use
another driver, even if it's only AHDI!

> with it, but it said something about "NH-MiNT" or something like that,
> which apparently is a patched version of the original MiNT. As I mentioned

This is "MH-MiNT", which has later been renamed to "FreeMiNT". Get 1.12.6
(Or even better 1.14) as this solves one major problem; the blocking fork().

> I read about KGMD everywhere- is this a "better" distribution? Should I
> download and install this instead? I'm not too keen on downloading several
> MBytes of data again, possibly just downloading the same thing again...

It's much, much better, but it really needs more power than a 4Mb STE
can provide. Stick with TAF.

> I've tried CBHD and AHDI- they're a pain to install, so I gave up. ICD

Did you get Uwe Seimet's AHDICONF? Installing AHDI is a no-brainer with
this utility.

> works great! No problems at all. I think the later versions of ICD's
> software should be okay (or so I've heard).

Earlier (4.x?) works with MinixFS, 6.5.5 doesn't.

Date: 1996-10-27 00:00:00 UTC
From: cronos@worldaccess.nl
Message-ID: <N.102796.155905.54@wxs7-11.worldaccess.nl>
Source record: 135204

Hi there!

I am putting up for auction my signed copies of Overlanders' "European Demos", Delta Force's "Syntax Terror" and Lost Boys' (plus friends) "Ooh Crikey Wot A Scorcher". These disks are signed by all the members who participated in the creation of these respective demos.
I figured you might want to make a bid on these disks, too. They are all one-disk megademos for Atari ST only; "European Demos" is two disks. I have mailed this message to comp.sys.atari.st too (with more titles that I am getting rid of). The opening bid is 7.5 pounds per demo.
Unless you make a bid, of course, you will not be bothered with more of these messages.

Thanks for your time...cheers!

I seem to be unable to write any .TST files using Gembench by Ofir Gal when
running it under GEMulator. How come?

Right. I have switched to the PC and will only be retaining various titles
from my Atari software collection insofar as they work on the GEMulator.
Financial reasons have kind of forced me to sell the Falcon, so I will
basically be selling stuff that only works on the Falcon. Ever since I got the
Falcon and sold my MEGA ST, I've been having a lot of ST-specific titles
(games) sitting around that I will also put up for sale here.
Specs follow below. ALL THESE TITLES ARE ORIGINALS, PRE-PROD COPIES, OR
EVALUATION COPIES. NO PIRATE COPIES. Swap offers not welcome.

FIRST CATEGORY: GAMES FOR ST, WITHOUT MANUAL, WITHOUT BOX

Airball
Airball Construction Kit
Arena (2 disks, Psygnosis)
Arkanoid (Imagine/Ocean)
Backlash (Paul Woakes, Novagen)
Barbarian (2 disks, Psygnosis)
Black Lamp (Firebird)
Blood Money (2 disks, Psygnosis, bloody excellent game)
Brattacas (Psygnosis, classic hi/med res game)
Bubble Bobble (disk will handled, was my absolute fave game)
Chaos Engine (2 disks, disks patched for use on Falcon, can't press any keys
until the game starts or it won't work; don't know if it still works on the ST)
Deep Space (2 disks, Psygnosis)
Defender II (ARC/Atari, by Jeff Minter, classic game, but difficult to play)
Dragonflight (Thalion, 2 disks, double-sided drive required)
Dungeon Master
Enchanted Land (Thalion)
Extensor 3.3 (Tron-like game, monochrome only, by Golden Games, ancient)
Formula One Grand Prix (excellent game, 3 disks, includes manual that you need
for the copy protection - passwords)
Gods (superb game, two disks, by Bitmap Brothers)
Goldrunner II (boot/game disk plus data disk, by Microdeal)
Goldrunner II Pete Lyon data disk
Goldrunner II some other guy official data disk
Gridrunner by Llamasoft, excellent game by Jeff Minter
Hitchhiker's Guide to the Galaxy, the original Infocom adventure (alas, no
gadgets anymore, I lost 'em all)
Jambala, the Seven Gates of (Thalion, DS disk version)
James Pond (by Steve Bak, Millenium Software, preview copy, but is a full one)
Jupiter Probe (legendary Steve Bak shoot-em-'up with Rob Hubbard Music)
The Killing Game Show (Psygnosis, 2 disks)
Leatherneck (Microdeal shoot-em-up, really cool, have to disconnect printer to

get it to work, does not work on Falcon, alas)
Lemmings (need I say more?)
Oh No! More Lemmings
Lemmings 2
Lethal XCess (absolutely great shoot-em-up from the author of Wings of Death, by Eclipse, 2 disks)
Little Computer People (Activision, really cute game)
Magic Pockets (great Bitmap Brothers game, one disk)
Monster Business (platform game, Eclipse design)
Nebulus (John Phillips excellent game)
Obliterator (2 disks, Psygnosis)
Photon Storm (hellishly difficult Jeff Minter game)
Prehistoric Tale (Thalion game, coded by The Lost Boys, platform thing)
Return to Genesis (the first true horizontal smooth scrolling shoot-em-up by Steve Bak, excellent graphics, great game)
Revenge of the Mutant Camels, registered version for 1 Mb ST
Rick Dangerous (pre-prod copy, looks dodgy but is full version, and legal too. Heavily used, was one of my fave games)
Rick Dangerous II
The Sentinel (legendary Firebird game with 10000 levels or whatever)
Shaolin, Chambers of (Thalion, Martial arts game, 2 disks)
International Soccer (Microdeal, I think it's the best soccer game ever on the ST)
Spaceport (like Fort Apocalypse on the C-64, great concept, dodgily programmed)
Starglider (the legendary Jez San game)
ST Karate (great graphics, old karate game by Paradox)
Stone Age (really nice puzzle game by Eclipse, excellent graphics, DOUBLE FORMAT, WORKS ON ST AS WELL AS AMIGA!!)
Teramis, Leavin' (vertical scroller, shooting about spaceship, Thalion game)
Terrorpods (2 disks, graphically impressive, Psygnosis)
Virus (legendary David Braben 3D game, by Firebird, doesn't work on all disk drives (sometimes you have to press the 'eject' button lightly)
Warhawk (budgetware shoot-em-up by Silverbird, with Rob Hubbard music)
War in Middle Earth (RPG "Lord of the Rings", *really* impressive, 3 disks, Melbourne House)
Warp (nice Thalion shoot-em-up)
Wings of Death (great 2 disk shoot-em-up, by Thalion)

COSTS: Remember, no manuals and packaging. All I'll be sending you is the disks. I am selling all this stuff at 2.5 British pounds per disk. Refer to the end of this text for more details.

SECOND CATEGORY: UTILITIES

These are sold without manuals either, unless specified. All original stuff, no pirate stuff.

1st Word Plus, 3.20 TT (2 disks) *
Crypt It (old Tommy Software encryption thing)
Degas Elite (Batteries Included) *

Diamond Edge, version 1.x *
Diamond Edge, the latest version 2 ** (with manual) SOLD
Diamond Back 3 ** (with manual)
Ed Hak (editor) *
FastCopy Pro 1.2 * (works on Falcon)
G.I.S.T. the Sound Tool
Desktop Butler James *
Geneva ** (1 disk, but this one counts as 2 disks), latest patched version, manual available)
Imagecopy 2 * (2 disks)
Imagecopy 3 ** (3 disks)
Imagecopy 4 ** (2 disks) (with manual)
K-Rhyme (rhyming accessory) *
Mortimer (desk thing by Omikron)
Mortimer Plus * (see above)
Mouse Tricks 2 *
Neodesk 4 ** (1 disk, but this one counts as 2 disks), latest patched version, manual available)
Positive Image ** (2 disks, version 1.0, manual available)
Protext 5 ** (4 disks, and I also have the manual)
Le Redacteur ** (4 disks)
Spectrum 512 * (512 colour drawing program, ST only)
Turbo ST (screen speeder, ST only)
Universal Item Selector III
View II * (by DMJ software, good stuff)
Warp 9 ** (3 disks, version 3.81, best for ST)
Xboot 3.10 *

COSTS: The regular ones cost 2.5 English pounds per disk. Titles with one * cost 5 English pounds. Titles with two ** cost 10 English pounds extra. If you want the manual sent, that will count as one normal disk (2.5 pounds).

Examples:

Protext costs (4 disks plus double extra = 4 * 2.5 + 10) 20 English pounds without manual. With manual, it costs 22.5.

Imagecopy 3 costs (3 normal disks plus double extra = 3 * 2.5 + 10)

Fastcopy Pro 1.2 costs (1 disk plus extra = 2.5 plus 5) 7.5 pounds.

THIRD (AND LAST) CATEGORY: DEMOS.

This is basically a collection of demos that I have. The price varies per demo, and is given for each title. The price specified is in British pounds, so if you want to make another currency of it, check the "additional payment details", below. All demos are ST only!
!! These demos can only be fill-up orders, or orders if you have ordered more than 10 British pounds worth of the first and second category !!

BIG Demo (with handwritten text by ES of TEX, ST only) price: 2
Amiga Demo (ST only): 1
California Beach Girls (fantastic monochrome slide show of girls by the Denise Team. Classic old demo, requires DS disk drive, monochrome only!): 1
Thalion Sound Demo (a copy-protected rare Thalion sound demo, done in 1988, with Mad Max music. Never officially released. You can't put this in a PD library because it's copy-protected!): 2
FNIL (large DS disk drive demo by TNT crew): 1
DEF Demo (1 meg version of the first TLB demo, with hand-written label by Tim of the Lost Boys himself!): 2
TCB New Year's Demo: 1
Union Demo: 1
Cuddly Demos: With hand-written stuff by Nic of TCB: 2
Whattaheck Demo: With hand-written stuff by NIC of TCB: 2
Decade Demo by Inner Circle: With hand-written stuff by Griff of Inner Circle, final version of 12 sep 1990, STE compatible: 2
Syntax Terror Demo (megademo by Delta Force, compiled, made, finished and copies at the ST NEWS International Christmas Coding Convention in 1990, signed by New Mode, Slime and Chaos Inc. of DF!!): 7.5 *****
European Demos: (megademo of Overlanders, 2 disks, also finished and copied at the STNICCC in 1990, signed by all members of Overlanders): 8 *****
Dark Side of the Spoon (by ULM, megademo, with custom ULM label): 2
Lightning Demo (by pendragons, with handwritten label by pendragons): 2
Punish Your Machine (two disk demo, excellent, by Delta Force): 4
Ultimate Muzak Demo (by PHF), volumes I through V, five disks, only sold as a set, all with hand-written labels by Grazey of PHF: All five for 8
Ooh Crikey Wot a Scorcher (TLB megademo, excellent, signed by all members of TLB plus other participants such as Oxygene, Tyrem, Fury, Hawkmoon and Tanis of TCB!): 7.5 *****
Ventura Demo (2 disks, I think it's by ST Connextion, with hand-written labels by them): 4
Reality is a Lie: 1
Black and White: Rare Polish megademo, with hand-written stuff and pix by them on label: 2.
Colorz: By Haemaroids, hand-written label by them: 2.
Froggies over the Fence: Three disk "last of the true megademos", released september 1993, with custom Overlanders "Froggies over the Fence" graphic labels": 8 for all three disks.
Bedlam demo by Chaos: 1
Never + Forever Demo by STEW, GfA Basic megademo: 1
The Beginning of the Ending demo by Flexichron: Handwritten label by Offbase of Flexichron: 2

The demos with ***** are kindof special to me, and I am not very keen on selling them because they're signed by old friends and all. So the prices are "STARTING BIDS", meaning that you can bid on them. The person who makes the highest offer gets them.

- READ THE BITS BELOW!! READ THE BITS BELOW!! ------------------------------

ADDITIONAL PAYMENT DETAILS:

I would like people in Europe to pay in British pounds or German marks (German marks = British pounds multiplied by three). People from the Netherlands can pay in Dutch guilders (British pounds multiplied by three). I have to request people outside Europe have to pay in American dollars (British pounds multiplied by 2). No cheques, just cash or International Money Orders from the post office.
I don't like to receive any coins, so if you order for 7.5 or 12.5 pounds (or whatever other currency) then please pick another title and make sure the total amount is divisible by 5 (INT(x/5)=x/5). If you pay with Dutch guilders or German marks, make sure the amount is divisible by 10. If you pay in dollars, simply round off the amount to the next whole dollar and use US$ 1 bills.

GUARENTEE

I can't give any guarentees. Some of the games are old, and some of them have been sitting in my disk boxes for quite a while. All ST-specific titles have not been played since 1993 or so. I am not out to rip anyone off. I have been doing "ST NEWS" and have been doing (and will be doing) "Ultimate Virus Killer" for quite some time and I hope people know that I can be trusted.

WANT SOME?

Email your order and WAIT FOR CONFIRMATION (DON'T SEND ANY MONEY YET). The quickest mailer gets the first right on a given title. I'll mail back to confirm and then you can send off the dosh. I will despatch the disks by return mail.

If you have any further questions, please just email me. I also have for sale the Suzy B's Software Treasury, a double CD ROM with over 1000 Kb of Atari stuff, too much to even begin to summarize here. It's yours for 15 British pounds (or the equivalent), including postage (2.5 British pounds - or equivalent - extra in case you live outside Europe).

There is an old program called CONTENTS.PRG which allows you to output a
directory listing of a disk to a text file.

Any good to you?
I have it if you decide to take this route.

1547. Signed copies of classic MEGADEMOS!!

Newsgroup: comp.sys.atari.st
Date: 1996-10-27 00:00:00 UTC
From: cronos@worldaccess.nl
Message-ID: <N.102896.000327.01@wxs3-16.worldaccess.nl>
Source record: 135210

Hi there!

I am putting up for auction my signed copies of Overlanders' "European Demos", Delta Force's "Syntax Terror" and Lost Boys' (plus friends) "Ooh Crikey Wot A Scorcher". These disks are signed by all the members who participated in the creation of these respective demos.
I figured you might want to make a bid on these disks, too. They are all one-disk megademos for Atari ST only; "European Demos" is two disks. I have mailed this message to comp.sys.atari.st too (with more titles that I am getting rid of). The opening bid is 7.5 pounds per demo.
Unless you make a bid, of course, you will not be bothered with more of these messages.

Thanks for your time...cheers!

The only problem is the different partition scheme of TOS and DOS. Having
the some problem I did a quick and dirty hack some time ago. Send me a
mail (otherwise I'll forget it) to request a small patch... (If I have a
bit more time I'll post a clean patch!)

Source record: 135064

Alyre Chiasson (chiassa@umoncton.ca) wrote:
: Is there any way I can convert a GEM vector file into a vector format
: that I can read with WORD 7. I am dealing with a graph generated using
: BSTAT. The quality of the BMP file is too poor for publication. In
: theory the vector format should take care of this problem if I can get
: it into some type of metafile format such as CGM or WPM.

look for Paint Shop Pro (up to version 4 now) on the PC - available from
any good ftp site. This pc software reads all the most popular graphics
formats including GEM. I had a number of GEM images created with
EasyDraw(?) which I now use on the PC.

Paint Shop PRo will allow ytou to convert the image to WPM or CGM etc...

Hi Nico,

> Here is my question: is it possible to use a recent hard disk
> drive, found in any computer shop (and built essentially for
> PCs or Mac's) on a Atari 1040 STF? And how to do it?

You could try SCSI Link96. It's a SCSI hostadapter with SCSI II commando, SCSI Parity and SCSI Initiator support. It should work with the mordern SCSI harddisks and CD ROMs.

Available at:
Hard- & Softwareentwicklung N. Wieczorek
Habichtseck 43
44575 Castrop-Rauxel
Germany

It's about DM 150,-

Hope this of some use to you, Hans

1554. Gbell - AES table

From: evgaster@hvsae01.nl.lucent.com
Message-ID: <552215$r2s@ssbunews.ih.lucent.com>
Source record: 135068

I finally got around to completing the Atari build of MicroEMACS 4.00. I have been trying to upload it to a.a.u.e for about 2 weeks now, but I am not getting an ftp connection. There are always to many users already on a.a.u.e.

If there is indeed an interest in MicroEMACS 4.00 for the Atari then I am willing to try to upload it to other ftp sites. Just point them out to me.

Ed

From: friar@jaguar.autobahn.org
Message-ID: <551i5q$fri@ultra.exodus.net>
Source record: 135070

I am selling my Falcon 030 system. It has 4MB of RAM, 340MB HD, mouse, 14.4 external fax modem, Straight Fax Software, and Monitor Connectors. I would like $500 for the system, but since I need to sell it fast, you may email me at valdesg@uchastings.edu with your offers. I will consider all reasonable offers. It is in great condition.

As for shipping and handling, buyer will pay shipping and I would like it pre-paid or COD in the US. If interested you may email or call 415-565-6745.

Thanks

1558. Hard disk for Atari STF ???

1559. FS: Atari 520STfm System

Newsgroup: comp.sys.atari.st
Date: 1996-10-28 00:00:00 UTC
From: jeff@dltassoc.com
Message-ID: <552i10$q4s@dfw-ixnews7.ix.netcom.com>
Source record: 135072

I have the following Atari hardware for sale:

Atari 520STfm computer
Atari PS3000 color monitor w/second 3.5 drive
SMM 804 dot matrix printer (top cover slightly cracked but it works)
Atari mouse
All cables
All or most of the manuels
Various software

Everything works great but I am running out of room to put everything!

All for only $225.00 (US) OBO.
I will pay shipping in cont. US.
COD Secure shipping.

Please email responses.

Thanks-

Jeff Peterson <jeff@dltassoc.com>

Just who makes the decisions about who can and/or cannot create a UseNet newsgroup? I agree with being able to zero in on MIDI, DTP & so forth. In other newsgroups I have been trying to set up an area where people from around Canada could report in the price of gasoline, especially in times of price volatility, but I'm a newbie with the 'net.

Well, I have tried Metados both before and after MiNT, but the problem
does unfortunately persist.

Any other ideas, anyone?

1562. Sharing removable HD's between Atari and Intel-based machines

Newsgroup: comp.sys.atari.st
Date: 1996-10-28 00:00:00 UTC
From: comezana@pirulo.cac.psu.edu
Message-ID: <551iab$1ah8@r02n01.cac.psu.edu>
Source record: 135131
Cross-posted to: comp.os.linux.m68k,comp.sys.atari.st

Is there any way Atari and Intel-based machines can share removable HD cartridges (SyQuest, for example)? I have read that in the FAQ that the m68k and i386 versions of extfs2 are different at the physical layer, and I have personally tried using MSDOS, but unless I am doing something wrong, cartridges formatted on the Falcon are unreadable by IBM clones (at least under Windows95 and DOS 6.x) and viceversa. Any tips will be welcome.

Gustavo

1563. Upgrading MEGA ST2?

Newsgroup: comp.sys.atari.st

1565. ANNOUNCE: Atari Falcon MPEG Audio layer II realtime DSP decoder.

Newsgroup: comp.sys.atari.st
Date: 1996-10-28 00:00:00 UTC
From: Tomas Berndtsson <tobe@lysator.liu.se>
Message-ID: <Pine.GSO.3.95Lrindlow.961028193019.11192D-100000@tintin.lysator.liu.se>
Source record: 135134

Yes! A new version is available, with lots of bug fixed and new features!

It can be found on these ftp's:

ftp://ftp.nocrew.pp.se/pub/nocrew/tos/mp2_07.lzh

Right now in this directories, but will be moved:
ftp://ftp.uni-kl.de/pub/atari/incoming/mp2_07.lzh

Read more on http://noring.org/mp2/
There you can also get the latest version.

A few new things are:

* The MPEG decoder now uses both handshaked and non-handshaked
DMA communication at once! This was made possible by a special
bit-shifting technology invented by NoCrew.
* The MPEG player doesn't take any CPU time! (except for loading
MPEG data from the disk)
* The decoder now features a GEM interface, also working as ACC.
* Several new options, including pause and stop.
* Automagical sync detection and recovery routines. This feature
enables you to load MPEG files (most cases) not properly aligned.
* Automatic clock detection. The program now checks if an external
clock is available, and uses it if so.
* If the program can't load any MPEG data for a period of time,
the DSP continues to replay until the buffer is empty. The
program will, of course, continue to replay when it gets a
chance to load again.
* Count down display.
* MiNT support, and several other systems.

All sources are included in the package and it's released under the GNU
General Public License 2.

We're also working on a version for Atari Linux.

Songs can be found at http://www.iuma.com
NOTE ONLY STEREO SONGS ARE SUPPORTED IN THIS VERSION! **NOTE**

Enjoy!

There is a great utility called HD Driver that allows you to do just this with the help of BIGDOS.

All the best,

Chris @ Computer Direct

RCain@nest.demon.co.uk (Roger Cain) wrote:

>How do you get the 3Mb? Is it by using the "bank-expander" circuit (I forget
>who designed it now).

Hi Roger,
thanks for your response.
I am using a 2MByte module as bank0 and my soldered in memory as
bank1. For speed reasons (to avoid your problem) I replaced the
buffers and flip-flops (74 LS ...) for the memory with 74 ALS ... .The
addresses are multiplexed, the Atari actually believes it has 4 MByte
of memory until the power-up test (writing the test pattern at
start-up) sets the right limits - 3 MByte.
I am working with the 3 MByte solution for more than six years now,
without experiencing any problems.
The other thing is: I had the system running with the same
configuration, just without BIGDOS - no problem. Except for the waste
of HD space caused by the sector/cluster size on 256 MByte partitions
on my Quantum Fireball. Thats why I thought to myself: lets get some
more partitions and reduce the size.... wrong move...

Cheers,

Karsten

1569. Program wanted - file/disk scrubber

Greetings all,

Some time ago I am sure I saw a utility which deletes files by overwriting
them with garbage, hence making them non-recoverable.

Do you think I can remember the name? Nah.

Can anyone help? It needs to work on hard disks as well as floppies.

Thanks in advance for any help...

Almost any Seagate drive will be plug & play, up to about 1 gig at least.
Most otehr brands wil be a PITA using the Atari MEga STe host adapter, but I
suppose they can be modified to work. However, since Seagate is available and
widely distributed, why bother? Even my Seagate 4 gig will work, if I don't
want more than 4 partitions (and of course, I /do/, so I'm using an AdSCSI+).

1572. 1040STE Disk Drive Problems

Newsgroup: comp.sys.atari.st
Date: 1996-10-28 00:00:00 UTC
From: jackee@unix.dsoe.com
Message-ID: <846538922.22964@dejanews.com>
Source record: 135141

I have a 1040STE upgraded to TOS 2.06 and 4MB RAM. The internal
drive will not execute most disks I have but my external drive will.
My external drive is noisier however when hooked up to my 1040STE than
when its hooked up to my 1040STFM. I heard that TOS 2.06 changes the
step rate of the drive and a prg is needed calledhd_fdc.pgm to change
the step rate back to normal. Can anyone help me with this problem?

>

Fair enough, if that's what you want. Personally I wouldn't be that worried about samples that I want them to slow down other processes. Given the cheap prices of STes these days (<100 pounds), together with their other advantages, I would say that they really should be viewed as a minimum requirement for programs requiring sampled sound.

If people wish to develop software to acheive the task on an 'FM, then I'm totally behind them (I own two myself), but I don't think there is the need to develop a new protocol for calling those sounds, etc. when there is a perfectly good solution in the form of SAM for a large number of machines.

I checked the Atari Compendium for the SAM stuff, the other day. In order to play a sample using SAM, on STe, TT or Falcon, you only need to call a single Xbios function (WavePlay() or something similar, I think it was called). No messing with the microwire interface for the STe/TT. No worrying about the fact that the Falcon uses a different system. No need to mess with AV protocol or anything else. Why reinvent the wheel?

>> Even if you decide it is, the ST code would add unnecessary bulk to
>> the program for STe users or above - so separate versions would be best.

> The replay code that came with my Replay4 cart compiles to just under 3k,
> I don't think saving 3k of space is worth the trouble of seperate
> versions. Keep in mind the code is called *many* times a second. It *has*
> to be tiny...

Fair enough, I hadn't realised it would be so small. Of course there's the additional code for determining the type of sound system installed, and then the different versions of the code for STFM, STe and Falcon. Maybe all very small bits of code, but all adding up and strictly speaking unnecessary.

By all means, go ahead and write your program, it's just that I don't think it will get the support you envisage. Whilst I agree that there _needs_ to be a standard way to call sounds, I think most people that have used SAM will probably also agree that it is the best way to do it. Given the ease with which it can be used to playback samples from other apps as well (as I said, no message passing, AV protocols, etc.) I think you might be onto a bit of a non-starter.

Cheers,

Xav

How do I go about installing something like that? I guess it's a bit more
complicated than how I installed the TAF distribution...

>> I'm using TOS 2.06 and version 6.5.5 of the ICD harddisk driver which came
>> with "The Link II" SCSI adaptor.
>
>Arghh! Do _not_ use 6.5.5 with MinixFS! It won't work! It messed up
>my IDE (I have a Falcon) big-time when I tried it. PLease, _please_ use
>another driver, even if it's only AHDI!

Oops... I thought all newer versions were OK. Too bad.
Well, I tried installing "CHBD" and this time I got it to work!!!
But it seems to be pretty buggy, or incompatible with my ACCessories/auto
programs or something since it freezes the computer a lot when trying to
configure it. Or perhaps it's because my German isn't good enough and I
press the wrong buttons, but still....
I would really like it to boot a little faster than it does now, but I
don't understand how I can set that in the "CHBDCONF" program.
Anyone know how I can exclude the various SCSI IDs, (since I only need to be
using 6 and 7)?

I don't understand most of the setup parameters there- it sounds pretty
technical, and when it's in German as well it makes it even harder.
By the way, I used "chbd.prg" and renamed it to "chbd.sys" in the
boot-partition, but I found out that there's a program called "cbhd0.prg"
as well- what's this for? Should I use this one instead?

Anyway, the error message I just had went away!!!! :-)
So that's one problem solved, but another one remains: .prg and .app files
are still treated like text files when I double click them (yes- I've tried
booting with "newdesk.inf" disabled).

I also get another error message while MiNT is booting:

PID 0 (MINT): u\usr\etc\syslogd :error while attemptimg to execute

I guess this has something to do with the inclusion of "syslogd" (whatever
that is) in the "mint.cnf" file. I did what you said and made a line there
like this:

exec u:\usr\etc\syslogd

(by the way, what is this line supposed to do?)

>> with it, but it said something about "NH-MiNT" or something like that,
>> which apparently is a patched version of the original MiNT. As I mentioned
>
>This is "MH-MiNT", which has later been renamed to "FreeMiNT". Get 1.12.6
>(Or even better 1.14) as this solves one major problem; the blocking fork().

Let me see... when booting it said this:

MH-MINT v1.12h2-BETA
(compiled Dec 1 1994 with options: FASTTEXT DEBUG_INFO CREATE_PIPES)

Does this mean I have a useless version?

>> I read about KGMD everywhere- is this a "better" distribution? Should I
>> download and install this instead? I'm not too keen on downloading several
>> MBytes of data again, possibly just downloading the same thing again...
>
>It's much, much better, but it really needs more power than a 4Mb STE
>can provide. Stick with TAF.

Well, 4MB is the best I can do with my STe... What's so much better with
KGMD? Does it have more programs or something, or is it a different version
of MiNT? What am I missing out on?

>> I've tried CBHD and AHDI- they're a pain to install, so I gave up. ICD
>
>Did you get Uwe Seimet's AHDICONF? Installing AHDI is a no-brainer with
>this utility.

Yes, I've got it, but it seemed that AHDI needed to format/partition
the harddisk... I couldn't find any option where you could just install the
driver in place of another one.
But alas I got CBHD to work (well, so far so good, although I really could
need a shorter boot time- it shouldn't have to scan all SCSI IDs, should
it? At least this is something I can disable on my ICD driver).

>> works great! No problems at all. I think the later versions of ICD's
>> software should be okay (or so I've heard).
>
>_Earlier_ (4.x?) works with MinixFS, 6.5.5 doesn't.

Strange.... they make earlier versions compatible, but later versions
incompatible... it's usually the other way round.

1580. Re: Upgrading a Mega STe, PAK 68/3 68030, etc.

Newsgroup: comp.sys.atari.st
Date: 1996-10-28 00:00:00 UTC
From: "Oliver S. DePeyer" <saspeyer@reading.ac.uk>
Message-ID: <Pine.SOL.3.95.961028143617.22759A-100000@suma3.reading.ac.uk>
Source record: 135149

Hang on, I had a rather different experience with my MegaSTE...

This time last year, my trusty Seagate 52Mb internal drive died on me. I rang around all the usual UK Atari stockists (Gasteiner, Atari Workshop etc.) and I also checked out mainstream PC retailers. Gasteiner told me that I might as well use my host adaptor as a paperweight because no modern hard drives would work with it! The guy on the 'phone said this was due to parity problems.

The Atari workshop said this was exaggerating, and that they COULD get more modern drives to work by wiring jumpers on the drive. For two hundred pounds sterling - the same sum I had paid
for my original drive two and a half years earlier - I got a huge 520 meg drive, and for 300 pounds I could have got a 1 gig. I understand that prices have halved again since then!!! The drive works great. Still, it hardly seems to be "plug in and play". If the advice I was given is accurate, you'll need professional help to alter the drive, unless you're confident with a soldering iron.

Still, that's only my experience. How have other people fared?

Yours,

Oliver

1581. FS: List of remaining items to clear (UK)...

Newsgroup: comp.sys.atari.st
Date: 1996-10-28 00:00:00 UTC
From: "Dr. Simon G.K. Williams" <williamssg@cf.ac.uk>
Message-ID: <DzzurH.EDE@cf.ac.uk>
Source record: 135150
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Hi again atarians!

Although most of this top hardware and software for the Atari ST,STe, TT
or Falcon computers has been sold, there are still a few goodies
remaining. All these items are in pristine condition, boxed and with
manuals. Why buy new when you can
save pounds!

All items are open to offers, please email me if your interested.
P&P IS included in these prices (within UK). I can send outside UK for a
small extra charge.

SOFTWARE

Calligrapher Gold (all plug-ins included): ï¿½35
Trueimage: ï¿½15
Studio Photo 24: ï¿½30
Script (macwrite clone): ï¿½30
Diamond Back 3: ï¿½25
Neodesk 3: ï¿½15
PixArt 2: ï¿½20
Twilight (screen savers): ï¿½15

"attention all animation fanatics...."

PHASE-4 3D key animation studio package includes:
* Chronos 3D keyframe animator (with dongle and TT/Falcon versions):ï¿½65
* Phoenix 2 object renderer: ï¿½45
* ANM-link (interfaces chronos and phoenix): ï¿½20
* Cyber 3D edit/creation stuff (cybersculpt, cyberpaint, cybercolor
etc):ï¿½20

Entire package sell for ï¿½100 including delivery!

HARDWARE
Videomaster AUDIO-VIDEO grabber: ï¿½50
Vidi12 ST colour digitiser: ï¿½50
Graffiti genlock for Atari STE: ï¿½80
HAMA digital trilock genlock (for Any computer, NTSC/PAL): ï¿½200

Matrix TC1208e 2MB VRAM graphics card for TT
"THE" ultimate graphics accelerator and display card for your
TT computer. Incredible quality output, fits inside TT. Only
1 yr old and cost ï¿½1000! Complete with NVDI4 and more....
Sensible offers please....

If interested in any of the above then please contact:

I use a Zip Drive connected to a Falcon with no problems at all. I have an IDE
hard drive but the ZIP drive is the only SCSI device connected. It sounds as
if there is a termination problem or you have not set the Zip drive identity in
the hard driver prg. I use HD DRIVER 4.5.

David Lawrence at uu.net makes those decisions. It is in fact more likely
that we could get a reorg passed to split this group than getting the binaries
group(s) created, because such things are done constantly for exactly the same
reason - excessive content making browsing difficult.

What's required is an RFD, followed by about 3 weeks of discussion, followed
by a vote, followed by selection of the scapegoat...

May I suggest that you donate all of the software you are marking as "free" to our friend in Hungary? He's close to you (compared to me <G>), and I'm sure Sebi would be ecstatic to get "new" software with manuals and everything. I have 3 games picked out for him right now, and expect to mail them this week, but surely he'd love to have anything anyone can spare!

Source record: 135016

Just recently I have seen in the stores the 230mb hard drive by Syquest to replace the 135mb one they had before. Does anyone know if this will work on the ST series of computers? I do have the LINK device (the first one and it works great w/my 100mb hard drive now) so that isn't the problem. Do I need a special program for it to be recognized or what? I am using an 1040STe w/4 meg of RAM w/a color monitor. Thanks...by the way, I use TOS 2.06 if that matters.

Hello,
I believe that KA9Q only supports mail and nees right now. There
is a web browser being developed for it. The package that
you tried earlier has been updated as well. I had success
using it on a Falcon. You might want to have someone
on the Internet give you a hand.
I am using a Macintosh and it is nice for the Net although
I am unsure what is out there for a monochrome Mac running an
older system than 7. There should be software available.

In case anyone is interested...I have the Ultimate Ripper and Multiface II cartridges for sale. They're not Falcon-compatible, so ST only. I haven't got the manuals anymore. If you're interested, just email me with an offer.

1603. Re: EZ 135 IDE on Falcon

Newsgroup: comp.sys.atari.st
Date: 1996-10-29 00:00:00 UTC
From: Terry Miller 2 <bitbrker@ipa.net>
Message-ID: <3276CC01.1BE3@ipa.net>
Source record: 135022

I recently hooked up an EZ135 drive to my Falcon as well. It worked right off the bat once I set the SCSI to zero. It's nice to have a nice big fat chunk of hard drive space again! I love it!

Nowhere. N.AES is not free. If you are looking for free AES Clones you
should try XaAES or oAESis. N.AES has the advantage that it is not only
beta. The others still work, but they are by far not that stable.

j> 2.06 (non switchable). The computer cannot seem to read most of the
j> disks I have using its internal drive. Even a lot of the disks that
j> came with the computer have this problem. However, when I use my
j> external drive it will run the programs fine.

I used to have exactly this problem, but with a plain TOS 1.06 STe, shortly
after I upgraded the internal drive - even though this is a different
situation, the solution may be the same - try it...

Place a blank floppy in the external drive - can the disks be read and
programs run from the internal now? For some reason, they did for me.

I tried to take the machine back to the shop who fitted the new internal
drive, but when I did so the problems magically went away and came back when
I got home again.

In the end, I traced it to the way that all the cables were intertwined
behind the ST - somehow there was interference between them. The only
consistent solution was having a floppy in the external drive.

The best fax program for the Atari is CoMa, a demo of which should be on the
Hensa archive.

I have for sale an Atari TT030.

Includes:
- 8 Mb internal memory (4 Mb ST-RAM / 4 Mb TT-RAM).
- 212 MB Maxtor.
- 48 MB Seagate.
- TTM194 19" monitor (1280 x 960 x 2).
- SLM804 laserprinter (just installed new drum and toner).
- Spectre GCR Apple Macintosh emulator.
- Lighthouse tower case with 150 Watt PC power supply.
- Original case and powersuply available and usable without soldering !
- DD drive.
- Also have a HD drive available but needs Ajax controller.
- 8 x 1 Mb simms for TT-RAM upgrade (needs another TT-RAM board).
- Lots of dutch Atari related magazines and books.
- About 175 diskettes with Atari software.
- And more.

All in one sale,
Asking fl. 1700,- (+/- US$ 1000,-)

Han van Almkerk

Hello Everyone,

My friend as aquired an Atari 1024ST F along with a SH204 Hard Drive.

Unfortunately, his SH Boot Disk (that came with the HardDrive) seems to have an error and no longer recognizes the Hard Drive. (no backup made and Yes I lectured the newbee on the importance of Backups!)

We cannot find another copy of this disk in town.. sigh :(

The only way I can help, is to ask someone to send me all the files that come on this disk, and I'll modem them to him.

I can handle zip/lha/zoo packing.

PLEASE email me first, if you can help. I'll also monitor this newsgroup for any other recommendations and insight.

Thanks Everyone.

Later eh?

>Can someone explain how to keep *.tos files from turning into ascii in
>Netscape download. Any help appreciated.

Holding down the SHIFT key when you click on the link is supposed to force a binary download. Sometimes it doesn't work; in that case, go into your Helpers config and add .TOS as a octet-stream file type. Ultimately, it may depend on the distant server or your ISP's server. You can get your local ISP to add TOS as a binary file type in their settings, but getting distant servers to do so is usually a problem.

Gustavo Comezana (comezana@pirulo.cac.psu.edu) wrote:
: Is there any way Atari and Intel-based machines can share removable HD
: cartridges (SyQuest, for example)? I have read that in the FAQ that the m68k
: and i386 versions of extfs2 are different at the physical layer, and I have
: personally tried using MSDOS, but unless I am doing something wrong,
: cartridges formatted on the Falcon are unreadable by IBM clones (at least
: under Windows95 and DOS 6.x) and viceversa. Any tips will be welcome.

I do not know how other HD-Drivers or other operating systems behave, but
I successfully share Syquest media (105 MB) between DOS/Win95 and MagiC 5.
The media were partitioned by DOS, and on the Atari side I use
HDDRIVER. I also use the very same cartridges with MagicMac 2.04.

BTDT... B^{<

Is this STDCAT v5.3? I certainlyused toget the problem, but with the later
version I *think* it went away (either that or I started using a different
formatter...)

>by, then the above just aint going to happen, IMHO I would like to see
>it, but unfortunately can't see any of them getting passed by
>whomever?, and thats a shame.....

The other problem, of course, is that some people would cross post to
all of the new news groups. Now let me think, there's some postings that
appear twice in the same group, that's four times in two groups, twelve
times in six groups.... is that an arithmetic or geometric progression?

I think the end result would be a whole lot more duplicate mails. Sad
but true....

Ali.

i have been tested 3 emulators on my p.c. tos2win,gemulator 96,and magic
pc
(demo version)
the ratio of compatibility is under at 10%
every atari software then i've been tested not works at 90%
well ! this is my questions :
1) if i had the rom card with G.E.M. in my p.c. they are much
compatibility with these 3 emulators ???

2)they are anybody here can i have 1 of these 3 emulators whith G.E.M.
card
and what are the compatibility ??

3) what of these 3 emulators is better

4) thank's to all for your answer because i want to buy this solution but
the report of compatibility in demo version does not seduct me !

TO BE CONTINUED....

5) AND NOW I KNOW WHY GEMULATOR DOES NOT SUPPORT A LOT OF
ST FLOPPY BECAUSE IF YOU HAVE DISK FORMATED AT 10 SECTORS PER TRACK
GEMULATOR CAN NOT READ THIS FORMAT THIS IS A REAL PROBLEM BECAUSE ALL THE
ST GAMES ARE IN THIS FORMAT FOR EX:DUNGEON MASTER !
IF THERE ARE ANYBODY HERE CAN KNOW AN EMULATOR CAN SUPPORT THIS FORMAT
PLEASE HELP ME AND SEND ME A MAIL !!!

BYE ALL ! FROM DDRCREW !
(excuse for my little english i'm french!)

Tried it - it's *nearly* works. Aftre the initial query it lets you skip the check, but just catalogues what was on the original disk with that number, or else you have to click back as it counts down to zero. as I'be hundreds of the little chaps to do, either my finger or the mouse would give up. More suggestions welcome.

1641. Replacing ICD driver with CHBD- how?

Newsgroup: comp.sys.atari.st
Date: 1996-10-29 00:00:00 UTC
From: hallvart@sn.no
Message-ID: <32763170af651@sn.no>
Source record: 135101

Well, the subject says it all...

I've been using ICD's harddisk driver 6.5.5 (which came with my ICD Link II unit), but since it's not fully compatible with all systems (like MiNT) I've decided to change over to a new driver, and CBHD seems to be the most attractive choice...

Now, the problem is that I'm not really sure how I should go about changing the driver without messing up my harddisk.
I was told that in order to install CBHD I should do the following:

-copy "cbhd.prg" to the root of the boot-partition (C:\)
-rename this file to "cbhd.sys"
-copy "cbhd.prg" to a diskette and reboot from the floppy-disk
-run "chbdconf.app" to install the new driver like this:
-load "cbhd.sys"
-edit the parameters needed
-save "cbhd.sys"
-reboot system

So I removed "icdboot.sys" from C:\ and followed the instructions above.
The result? Well, I've had almost nothing but trouble with it, so I returned to ICD's driver!!!
Well, that is I finally somehow got to install the CBHD driver (don't ask me how), but I was just told that my method of changing a driver could be hazardous to my drive!

I was to de-install the old driver and then install the new driver using the installer software since the driver changes the bootsector.
I guess this answers my question why I had so many problems with bombs, freezes etc.
I probably need some sort of program to "fix" my bootsector as well since it's probably been messed up big-time by now.

So, how do I go about in doing all of this?
I didn't find any "de-install driver" in any of ICD's software. I did however try "boot from disk", but this left me with just this! It made the system boot from the floppy even though I had installed CBHD...
Argh!!!! Any ideas?

Source record: 135102

I'm looking for folks that would be interested in helping support a general release of the GEM sources. I've been in contact with the new owner of GEM (Caldera) and they're looking at doing a general release of the sources free for non-commercial use. (they're also doing this for DR-DOS and Novell DOS 7)

While this would probably not be the Atari ST version of GEM, they would be full sources nontheless. If you're interested, please send me a note telling me what you might be able to assist with. I'll in turn forward the list of people to Caldera to show them that there IS still a vast interest in GEM among the computer community. My mail address is: geneb@web.wa.net

Thanks for your time.

Arthur - try putting FMC.PRG in your AUTO folder. That's Force MEdia Change -
it forces TOS to ALWAYS assume the disk has been changed when you access the
floppy.

Yes, there is a far better disk/hard disk cataloguing (it's doesn't do
CDs, sadly - if anyone knows of one that does CDs, please let me know - I
want to waste time, but list everything I have :)) program called DiskList.
This does things like read the comments out of LZH and ZIP archives, list
files out of other archival formats as well, and even more! Check this
out, and you'll be satisfied, I'm sure. The only negative thing I have to
say about it is that it does overwrite any disk name with its own. (e.g.
DISKLIST.001, DISKLIST.002, etc)

1648. FS/T: Atari ST software [10/29/96]

Newsgroup: comp.sys.atari.st
Date: 1996-10-29 00:00:00 UTC
From: vga2000@ix.netcom.com
Message-ID: <5561sa$9gb@dfw-ixnews11.ix.netcom.com>
Source record: 135108

If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it). Also, please be sure to read the entire message carefully before you ask me any questions. This will save us both some time. Thanks! -- MJN

*****

All VGA FS/T lists are updated weekly and are available on the WWW at http://www.io.com/~vga2000/

This list was last updated on 10/29/96

I have the following Atari ST software for sale or trade.

Unless specified, all items are *NEW* and are still shrinkwrapped.

SHIPPING ANYWHERE IN THE CONTINENTAL U.S. is $3 for the first item and $1.25 for each additional item, unless otherwise listed. If you order enough items I can weigh the order as a package, which might reduce the shipping costs.

Large orders will be weighed as a package, to reduce shipping costs.

SALE CONDITIONS:

1) Sales are first come, first served. Please include your full postal mailing address in your reply.

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be given priority (especially if the trade offer overwhelms me). I collect for over 40 different systems, so please feel free to send me a trade list. Ask for my want lists!

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. My personal philosophy is that something is only worth what someone is willing to pay for it.

8) Payment must be made in U.S. funds, by either check or money order, drawn from a U.S. bank branch. Orders from outside the U.S. are also accepted.

9) I reserve the right to refuse any sale or trade offer, and to correct mistakes made while typing this message.

SOFTWARE:

There is a package that has STiK accessory and the CAB web browser with other Internet programs availible. You will need at least a 14.4K modem, or even faster for downloading pictures when web surfing, and SLIP access. Tell the Internet provider is they have this and anything else like compressed SLIP. If so, then you're in luck. It's a pig to install though.

If you can live without the fancy graphic browsing, then you can use a shell account with any terminal program and a modem as low as 2400 which at least is good for the text but the downloads are much longer.

> PS Also is there a good word processor available for the ST ?

I recommend Protext and 1st Word if you can find those. Edith Pro is also an excellent text editor, but there's no formatting stuff like bold and underline.

Now that I think about it, didn't Novell have some dealings with DRI a couple of years ago? So maybe the question is .. "What did Caldera get from Novell?" (BTW, GEM is great! The absolute best implementation of the "office" analogy GUI! Thank you, Gary Kildale!)

1654. Re: Replacing ICD driver with CHBD- how?

Newsgroup: comp.sys.atari.st

Source record: 134964

Hallvard Tangeraas (hallvart@sn.no) wrote:
[...]
: Now, the problem is that I'm not really sure how I should go about changing
: the driver without messing up my harddisk.
The documentation isn't very clear, is it?
: I was told that in order to install CBHD I should do the following:

: -copy "cbhd.prg" to the root of the boot-partition (C:\)
: -rename this file to "cbhd.sys"
: -copy "cbhd.prg" to a diskette and reboot from the floppy-disk
: -run "chbdconf.app" to install the new driver like this:
: -load "cbhd.sys"
: -edit the parameters needed
: -save "cbhd.sys"
: -reboot system
I don't remember having to go through all this. Although I don't remember
what exactly I did, it seemed relatively simple. When I have time, I'll
go through the software to see if I can jog my memory.
: So I removed "icdboot.sys" from C:\ and followed the instructions above.
: The result? Well, I've had almost nothing but trouble with it, so I
: returned to ICD's driver!!!
You don't have to remove icdboot.sys; it's just another file that sits on
your c:\ drive. Ditto with cbhd.sys.
: Well, that is I finally somehow got to install the CBHD driver (don't ask
: me how), but I was just told that my method of changing a driver could be
: hazardous to my drive!
I don't see why...
: I was to de-install the old driver and then install the new driver using
: the installer software since the driver changes the bootsector.
No, the driver doesn't change the boot sector. The driver sits in a
standard GEMDOS file (which can be copied, renamed, etc.). The boot
sector points to this file, so when you install a new hard disk driver,
all that's happening is the boot sector is being changed, and a new
driver (e.g., cbhd.sys) is being copied to your c:\ directory.
: I guess this answers my question why I had so many problems with bombs,
: freezes etc.
: I probably need some sort of program to "fix" my bootsector as well
: since it's probably been messed up big-time by now.
If it works, it's fine. The boot sector, as I understand it, is not
strictly essential to the operation of the hard drive. To "fix" it,
re-install the ICD drivers, or re-install CBHD.
: I didn't find any "de-install driver" in any of ICD's software. I did
: however try "boot from disk", but this left me with just this! It made the
: system boot from the floppy even though I had installed CBHD...

The ICD programs have no knowledge of CBHD, so the can't really be expected to make CBHD autoboot. The option you've selected disables the boot sector, so the icdboot.sys on c:\ doesn't get executed (and neither does any other hard disk driver). You must therefore boot from floppy.

If you can't get CBHD installed, the following "duct tape and baling wire" method will work. Install the ICD drivers as usual, and replace icdboot.sys with cbhd.sys. Reboot, and you should see a message from cbhd.sys. I've got CBHD installed, and I switch back to AHDI using the same method, and it works fine.

Message-ID: <3277A3F5.72C5@facstaff.wisc.edu>
Source record: 134966

My understanding is that the larger capacity EZ Drive is the same basic setup as the EZ135. If so, you shouldn't have a problem. I plugged mine into the back of my ICD FaST drive box (which has the ADSCSI card inside) and off I went. ICD Utilities (version 6.0.5 I think) formatted and partitioned it just fine. The only minor annoyance for me is that I'd like to auto-boot from the EZ Drive because the one inside the FaST drive is dead, but so far I can only boot from floppy and then reset to load the STiK TSR program. The drive works really well and is fast enough that I don't miss the old Quantum at all (someday I will have to put something that works in the other drive case, I suppose).

Doug Kendall
dkendall@facstaff.wisc.edu

PS. Have you seen Syquest cartridges for the EZ drives in your stores too? They rarely appear in the Best Buy here where I got the drive.

Richard Wegner wrote:

I received that news letter as well, but as far as the "wake" or "new era" is concerned...this is the reality for Atari computing that already happen.

Atari Corp is no more, and support will only by from the people who still use the Atari's. Most people will have to use the PC for current computing with the Mac as the alternative. And everyone in my (former) Atari club is giving away their ST stuff and the reason I still don't have a PC is because I have yet to save up for it (since I need to program on it to break in the computer game business).

But...we already have emulators out to use on "mainstream" platforms and Atari support is still strong, especially on the Internet!

So as long as Toad can still sell ST products, we all should still be ok. Heck, he still sells the latest PC's with Gemulator. :)

BTW, Dave Troy wrote an article in Current Notes called "Requiem For A Faith" which explains where Atari computing is heading and it's actually optimistic.

Hello,

I've been trying COPS (COntrol Panel Server) from the Behne brothers. It is a really nice XControl replacement, but one thing bugs me. The original control panel allows you to set the date and time of the computer, COPS does not (or maybe I'm missing something). So does anyone know of a tiny CPX that allows you to do this?

Michael

If you're using later versions of NVDI with MagiC 4 and above you should be using the print routine in the FAST_PRN folder on the NVDI master disk.

Yup. Loads of it :)

Try Junior Office first - it is freeware and available from most sites. Some people have had a bit of bother setting it up but I use it for all fax work.

Then there is Coma - shareware.

And a number of other commercial packages.

Mmm , pretty old and small but never mind :)

Yes, you need hard disc utilities to format, partition and drive it. You can get ICD and Supra utils free from a lot of sites. There are also demo packages of HDDriver around.

Don't be too keen to reformat the disc - it may have some useful stuff on it. It should boot up if you connect it to your m/c. If not try loading one of the drivers I have mentioned and have a go at accessing it again.

Hi petitat2@sc2a.unige.ch, on 28 Oct 96 you wrote:

p>
p> Here is my question: is it possible to use a recent hard disk
p> drive, found in any computer shop (and built essentially for
p> PCs or Mac's) on a Atari 1040 STF?

If it was for a Mac you will prob. be OK as these use SCSI drives like those you require for the ST. Some PC use SCSI but more likely to be IDE (or even ST506!!).

You can tell if the drive is SCSI by looking at the connector - a SCSI interface is connected by 2 rows of 25 pins.

p> And how to do it?

As well as the drive you will need an adapter card to connect the ST DMA to the SCSI bus. Look for ICD AdSCSI, Link etc. as these do not worry about what parity the drive works with. You will probably also need a power supply (20 watt min.) for 5v and 12v.

p> And if not, where the hell could I buy a hard disk drive
p> compatible with my Atari 1040?

Keep your eyes on this area and you should see people selling ready-made solutions to this (shoe-boxes).

Hello, Richard. I just (Um, 3 months ago) bought the 'latest' UVK upgrade from Oregon Research here in the USA, & upon installing it, I was told it was already an outdated version. (It is 6.4.) Have we just had a long gap between versions, have you parted with Oregon Research, did they ship me an old version, or, um, what?

Thanks.

1681. Have you read BIG news! by Don Thomas?

Newsgroup: comp.sys.atari.st
Date: 1996-10-30 00:00:00 UTC
From: DOMINGO@news.delphi.com
Message-ID: <558isg$i75@news2.delphi.com>
Source record: 134991
Cross-posted to: alt.games.lynx,alt.atari-jaguar.discussion,comp.sys.atari.st,rec.games.video.atari

If you haven't e-mail me and I'll send you a copy. It is basically Don's nostalgic trip form the beginning to the end of Atari's tumultuous history. It's interesting reading anyway.

If you have read and haven't sent a copy to "dateline@nbc.com" then shame on you. Even in death, Atari deserves better. I grew up with a 2600 (actually a Sears VCS!). I had a 400, 800, 800XL, and still have many ST's, TT's, an STe and a Falcon. I have 2 Jaguar's w/CD and am about to have MANY Lynxes! I loved Atari's products and still do.

In addition to writing to Dateline NBC you could also write the NBC Nightly News at "nightly@nbc.com" as well as The Today Show at "today@nbc.com".

You can also write CBS News Up to the Minute at "mail@uttm.com".

I haven't figured out how to write to ABC yet. Any help would be appreciated. The web address www.abc.com yields ads for 101 Dalmations and the Lion King??? Maybe I have the wrong address...

Anyway, those are the address I've written to along with Tom Snyder at "latelateshow@cbs.com". I am not sure if David Letterman would care, so I didn't write him.

If you do decide to send e-mail to addresses not mentioned in my post, please cc: me and I'll write them as well. I just forwarded Don Thomas's article to them, but I suppose a personal note would make it, well, more personal. Maybe I'll put together a "form personal note". :-)

Thanks for listening, and spread the word!

Dom

Novell purchased DRI a few years ago. Caldera in turn recently purchased all the old DRI product lines from Novell. The end result is that they're going to be releasing the sources to the whole line in the coming year. I know that DOS (DR-DOS, Novell DOS 7, Palm DOS, Multi-User DOS, etc..) should be available in January. They have to go through the code and replace any encumbered (code not owned by Caldera) code before they can release.

It's Gary Kildall BTW. ;) (you can thank him a bit better by dropping a flower at his grave site. He was killed a year or so ago.)

I should get an answer about the rights to the Atari port of GEM fairly soon. I talked with my contact at Caldera about it and he's going to see if he can find out.

> for your provider...anybody have any helpful hints? :)

You have nohog.acc active? Without it chat (and other background
processes) just doesn't work, not dialling.

Otherwise post here your NOS dial script, we will try to build a
chatscript...

For the /etc/connect file (parameters for pppd) I think it will be the
same for any provider, you have only to add a "user YourLogin" statement
if your provider uses PAP protocol. And change serial device
("/dev/modem2" for my Falcon) and serial speed ("134" to get 57600 bps)
depending on your hardware...

Bye! Bruno.

t> the blitter.
t>
t> What is the best to upgrade the CPU/processor to the Mega STE level??

With that machine you're spoilt for choice ISTM. An ICD AdSpeed or
Hypercache would give you a 16MHz machine, but you've also got the option of
a T28 (28MHz) or a PAK 030, the latter of which will give you options on
upgrading RAM way beyond the 4Mb limit.

None of the above options require you to recase your machine.

: Mega STe!) I'd apprecite any recommendations for patches, AUTO programs
: or other "must have" utilities for this system. I'm already using
: ROMSPEED. I've also found that the standard SOUND.CPX seems to lock up.

That monitor is just beautiful, isn't it? I've got one myself, and it gets used most of the time. Anyway, other than a good hard disk driver and a good boot manager, you shouldn't really _need_ much more than HSMODEM. TOS 3.0x seem to me to be relatively bug free (which is to say, I've never run into problems). Of course, a replacement desktop is nice, as is a replacement XControl...ZControl works much more nicely. I also found that newer versions of SOUND.CPX didn't work; see if you can find an older version, since it originally first came out for the TT. If you can't, I can mail you mine, which I know works. NVDI is also great for speeding up the screen displays; if I had to go back to living without it, I'd be really frustrated.

It's that time again! So here's this month's list. Several changes this
time.
Once again thanks to everybody who has notified me about the changes- keep
'em coming in!
Enjoy.

Hallvard

New/changes since last list:

-ftp.uni-erlangen.de /pub/Linux/LOCAL/680x0/ (main Linux site)
-tsx-11.mit.edu /pub/linux/680x0/ (uni-erlangen mirror- Linux)
-ftp.phil.uni-sb.de /pub/linux-m68k/mirror.erlangen/
(uni-erlangen mirror- Linux)
-ftp.netbsd.org /pub/NetBSD/ (directory changed: this one leads
to all versions of NetBSD- choose the version
you want, then the Atari directory)
-ftp.teleport.com /pub/users/atari/ (now marked off as a
beginners/essential software site as it
contains not Linux/MiNT software, but GEM/TOS
software- mainly Internet software/utilities)

MIRROR SITES

FTP mirrors are alternative sites to certain popular ones which are
usually under a high load most of the time (many people accessing them
at the same time).
Mirror sites contain the exact same directories and files, but have
different entry points. Try to use the one closest to you geographically
and not during business hours (in that geographic area).

MAIL SERVERS

Mail servers can be used to get hold of the same software as through FTP,
but instead of using a lot of download time online, files can be 'ordered'
via email.
In order to get information about how to do this, send an email to the
various addresses below with the word: help
in the mail itself. If possible, do not include any 'signature' in the mail,
as the automated system which replies to these mails tries to interpret any
message (and with a certain amount of errors no response to your requests
will be given at all).

HOW TO GET FILES VIA FTP

Below follows a step-by-step guide on how to get hold of files via FTP.
Your specific version of the FTP program might differ slightly (it might
have extra functions and be more user friendly etc.) But the main procedure
is likely to be more or less the same.

The examples below are taken from a Unix environment using the usual
'ftp' program. The more user friendly 'ncftp' is recommended though,
as it's easier and more efficient to use.

[1] Starting FTP/logging into FTP site
==========

What to type What it does
---
ftp [ENTER FTP MODE]
open FTPsite-address (i.e: open ftp.funet.fi) [OPEN THE FTP SITE]
anonymous (when asked for username) [INSERT USERNAME]
USERNAME@SITE (your email address- i.e. hallvart@sn.no) [INSERT PASSWORD]

Example:
---
oslonett.no% ftp [ENTER FTP MODE]
ftp> open ftp.cs.tu-berlin.de [OPEN THE FTP SITE]
Connected to caramba.cs.tu-berlin.de.
220 caramba FTP server (wu-2.4/fb13[34] 18-Feb-1995) ready.
Name (ftp.cs.tu-berlin.de:celine): anonymous [INSERT USERNAME]
331 Guest login ok, send your complete e-mail address as password.
Password: celine@geonet.com [INSERT PASSWORD- (NOT SHOWN)]
230-You have reached Berlin, Germany. Access is allowed all day.
---

* You can also enter a site and start ftp at the same time:

ftp FTPsite-address (i.e: ftp ftp.cs.tu-berlin.de) [START FTP/OPEN SITE]

Example:
---
oslonett.no% ftp ftp.cs.tu-berlin.de [START FTP/OPEN SITE]

```
Connected to caramba.cs.tu-berlin.de.
--------------------------------------

* It's also possible to use the IP number instead of the usual FTP
site address:

ftp IP.number (i.e: ftp 130.149.144.4) [START FTP/OPEN SITE WITH IP NO.]

Example:
--------------------------------------
oslonett.no% ftp 130.149.144.4 [START FTP/OPEN SITE WITH IP NO.]
Connected to 130.149.144.4.
220 caramba FTP server (wu-2.4/fb13[34] 18-Feb-1995) ready.
--------------------------------------

\_\_\_
```

```
ftp> get setseek.zip [GET FILE]
200 PORT command successful.
150 Opening BINARY mode data connection for setseek.zip (3825 bytes).
########
226 Transfer complete.
ftp>
---------------------------------------

Several files at once:
----------------------
mget filenames (i.e: mget ao.lha xyz.zip ps.txt) [GET SEVERAL FILES]

Example:
---------------------------------------
ftp> mget silkmous.zip snip.zip [GET 'SILKMOUS.ZIP' AND 'SNIP.ZIP']
mget silkmous.zip? y [DO YOU WANT THIS FILE (y/n)?]
150 Opening BINARY mode data connection for silkmous.zip (22086 bytes).
##########################################################
226 Transfer complete.
mget snip.zip? y [DO YOU WANT THIS FILE (y/n)?]
150 Opening BINARY mode data connection for snip.zip (17852 bytes).
#########################################
226 Transfer complete.
ftp>
---------------------------------------

* You can also use 'wildcards' to ease the whole procedure of typing file-
names correctly:

Example:
---------------------------------------
ftp> mget ma* [GET ALL FILES STARTING WITH 'ma' IN CURRENT DIRECTORY]
mget maccell33.zip? y [DO YOU WANT THIS FILE (y/n)?]
150 Opening BINARY mode data connection for maccel33.zip (9012 bytes).
####################
226 Transfer complete.
mget mauswind.zip? y [DO YOU WANT THIS FILE (y/n)?]
150 Opening BINARY mode data connection for mauswind.zip (49373 bytes).
##################################################################################
##############################
226 Transfer complete.
mget maxidisk.zip.zip? y [DO YOU WANT THIS FILE (y/n)?]
150 Opening BINARY mode data connection for maxidisk.zip (20970 bytes).
#########################################
226 Transfer complete.
ftp>
---------------------------------------

* you can also use a 'wildcard' to get hold of single files or a specified
selection. Just be sure the wildcard is unique.
```

i.e. if you want to download 'stzip26.lha' and there are no other files which start with the letters 'stz', you can type: mget stz*.

You can also download all files within a directory with a single command: mget *

PS. you have to use 'mget' with wildcards- 'get' won't work!

Hint: if you're using 'mget' a lot and don't want to be asked if you want this file or not, you can use the command 'prompt'. FTP will then proceed to get all the files that match your wildcard without asking if you want them.

Example:
---
ftp> prompt [TURN OF 'GET THIS FILE (y/n)?']
Interactive mode off.
ftp>

_____

[4] Ending your FTP session
---
close [EXIT CURRENT FTP SITE, READY FOR A NEW FTP CONNECTION]

Example:
---
ftp> close [EXIT CURRENT FTP SITE, READY FOR A NEW FTP CONNECTION]
221 Goodbye.
ftp> [FTP IS READY FOR A NEW CONNECTION- 'OPEN...']
---

quit [EXIT CURRENT FTP SITE/FTP MODE, RETURN TO UNIX]

Example:
---
ftp> quit [EXIT CURRENT FTP SITE/FTP MODE, RETURN TO UNIX]
oslonett.no% [BACK IN UNIX]
---

* When doing a 'close' and re-entering a new FTP site you won't have to set up features like 'bin', 'prompt' and 'hash' again.
You will however have to set it up again if you choose to 'quit', then restart FTP.

>>>

A SHORT SUMMARY OF FTP COMMANDS/PROCEDURE
==========
ftp
open {FTP site address} [OPEN FTP SITE]
Username: anonymous
Password: {your email address}

cd {directory/directory etc.} [GO TO DIRECTORY]
bin [SET TO BINARY TRANSFER MODE]
hash [DISPLAY '#####' CHARACTERS FOR VISUAL CONFIRMATION OF DOWNLOAD]
ls -l (or dir) [FILE/DIRECTORY LISTING WITH LENGTHS]
get {filename} [GET A SINGLE FILE]
mget {filename filename filename filename} [GET SEVERAL FILES]
quit [EXIT FTP SITE/EXIT FTP MODE]

Other useful commands to know
==========
stat (or status) [DISPLAYS USEFUL INFORMATION ABOUT SETUP]
prompt [TURNS ON/OFF 'GET THIS FILE (y/n)?']
get {filename} - (i.e: get 00index -) [DISPLAYS TEXT FILE ONLINE]
!host {FTP site} (i.e: !host ftp.sn.no) [SHOWS IP ADDRESS OF SITE]
help [DISPLAYS A LIST OVER FTP COMMANDS]
help {command} (i.e: help bin) [EXPLAINS COMMAND]

FTP commands

! escape to the shell
$ execute macro
account send account command to remote server
append append to a file
ascii set ascii transfer type
bell beep when command completed
binary set binary transfer type
bye terminate ftp session and exit
case toggle mget upper/lower case id mapping
cd change remote working directory
cdup change remote working directory to parent directory
chmod change file permissions of remote file
close terminate ftp session
cr toggle carriage return stripping on ascii gets
delete delete remote file
debug toggle/set debugging mode
dir list contents of remote directory
disconnect terminate ftp session
form set file transfer format
get receive file
glob toggle metacharacter expansion of local file names
hash toggle printing '#' for each buffer transferred
help print local help information
idle get (set) idle timer on remote side
image set binary transfer type
lcd change local working directory
ls list contents of remote directory
macdef define a macro
mdelete delete multiple files
mdir list contents of multiple remote directories
mget get multiple files
mkdir make directory on the remote machine
mls list contents of multiple remote directories

```
mode set file transfer mode
modtime show last modification time of remote file
mput send multiple files
newer get file if remote file is newer than local file
nmap set templates for default file name mapping
nlist nlist contents of remote directory
ntrans set translation table for default file name mapping
open connect to remote tftp
prompt force interactive prompting on multiple commands
proxy issue command on alternate connection
sendport toggle use of PORT cmd for each data connection
put send one file
pwd print working directory on remote machine
quit terminate ftp session and exit
quote send arbitrary ftp command
recv receive file
reget get file restarting at end of local file
rstatus show status of remote machine
rhelp get help from remote server
rename rename file
reset clear queued command replies
restart restart file transfer at bytecount
rmdir remove directory on the remote machine
runique toggle store unique for local files
send send one file
site send site specific command to remote server
Try "rhelp site" or "site help" for more information
size show size of remote file
status show current status
struct set file transfer structure
system show remote system type
sunique toggle store unique on remote machine
tenex set tenex file transfer type
trace toggle packet tracing
type set file transfer type
user send new user information
umask get (set) umask on remote side
verbose toggle verbose mode
? print local help information

** Most of these commands work as 'on/off switches'. Each time you enter the
command it switches over to the opposite position (from on to off or
vice versa). If you're not sure about it's position, type: stat
(or: status) which will show your setup.

Be sure to check if transfer mode is set to 'bin'!!!! (if you try to
download binary files in ASCII mode all your downloads will be useless!-
You can download text files as binary as well, though you sometimes might
have to convert the end-of-line characters afterwards-
(get hold of 'unix2st.ttp' or similar program for this).
```

1698. Latest version of "ST-guide"?

Newsgroup: comp.sys.atari.st
Date: 1996-10-30 00:00:00 UTC
From: hallvart@sn.no
Message-ID: <32769ee2b4bcd5@sn.no>
Source record: 135034

What's the latest version of "ST-guide" and where can it be found?
The one I currently have dates back from '94, so I tried to download a more
recent one but ended up with an even older version!!
(seems like they don't have the version number in the file-name).

1700. Toad Computers QUITTING?

Newsgroup: comp.sys.atari.st
Date: 1996-10-30 00:00:00 UTC
From: thechyld@pcc-uky.campus.mci.net
Message-ID: <846721762_OASIS_@pcc-uky.campus.mci.net>
Source record: 135036

Well, I subscibe to Toad Computers automated STNews service, and I just got an E-Mail about their Toadfest for '96...and how it will probably be their last...about how it was a total success, and that they cleared out a lot of stock, and how their are readying themselves for a new "era" in their existence...Somebody please tell me that I misinterpreted this report, and that Toad is going to continue being there for us die-hard Atari users just like they always have! Please...

Dave, Jennifer!, or Ray...if you're out there please say it isn't so!?

1701. BG tiles on MAGXDESK in TC?

Newsgroup: comp.sys.atari.st
Date: 1996-10-30 00:00:00 UTC
From: chriswil@southern.co.nz
Message-ID: <556ppc$c0s@orm.southern.co.nz>
Source record: 135037

Hi there!

Is it possible to tile images on MAGXDESK (MagiC 4) in Falcon true colour mode? I have tried and failed, but was wondering if anyone else has tried and made it work? I have tried using 256 colour, and true-colour X-IMG pictures to no avail. I've also played with different palette options with GEM-View 3.16 (default colours, octree dither etc...). Nothing seems to work which is sad because when I get my Nemesis accelerator and Videlity software, I would like to run my MAGX desktop at 640 by 480 true-colour on my VGA screen...

Any clues as to why this doesn't work?

TIA,

Chris W.

Hi Andreas,

A few bombs eh? What type of system are you using? The only bombs I got was when I quit the program when I didn't disconnect the Host before exiting NEWSie. This program is still in development, but works very well for me... After 9 months on the Net, it's a welcome Newsreader for STiK. Don't give up yet :))

I recently downloaded it...but have yet to succede in getting it to
run on my Falcon 030. It keeps saying the modem isn't connected when
I know for sure it is! It also makes my desk top look freaky, even after
exiting the program. I've yet to read the documentation yet...so I'll
refrain from making a definate statement that it doesn't work on Falcons.

Source record: 135045

Hi,

I have recently bought an Atari 1040 ST for use in a midi setup, ie. the Atari is only used to run Cubase sequencing software. However, I believe it is possible to use the Atari to access the Internet.

Could someone therefore please tell me exactly what I need to do this, which software and hardware and how much it will cost. No fancy jargon or mind-numbing abbreviations please.

Cheers, Pete..

PS Also is there a good word processor available for the ST ?

PPS Please dont flame me with "Read the FAQ" type replies coz I cant find one.

I've done this twice and it worked both times, on a 520STFM and a Mega ST 1.
The operation is fairly simple, you only need a chip (a binary counter of
some sort) a few strands of wire, and a DPDT switch. You must use some
replacement software (HSMODEM6) for the serial port because the original
Atari routines can't cope when receiving at 38,400 baud.

Full details on how to do this were printed in ST Applications, a UK
Magazine a i couple of years ago. I'll dig it out and do a summary if
you are interested.

BTW, the MEGA ST 1 has the same chips as a STFM there just in a
different place.

Hope this is of help,

Chris.

1716. FS: Complete Atari TT030 System (US)

Newsgroup: comp.sys.atari.st
Date: 1996-10-30 00:00:00 UTC
From: mparrott@kendaco.telebyte.com
Message-ID: <557ibo$1b@kendaco.telebyte.com>

Selling my COMPLETE Atari TT030 system. Includes:

- 15" CTX multiscan monitor
- TT030 (Rev. H motherboard) with HD "A" drive
- TT RAM daughterboard
- 4 Mb ST RAM, 16 Mb TT RAM
- 48 Mhz CaTTamaran accelerator
- 290Mb Maxtor internal HD
- 340Mb Quantum external HD, case/p.s.
- ICD Link SCSI host adapter
- Indus GTS-100 720K "B" drive
- Golden Image Handscanner w/scanning tray
- ST Replay sampling cartridge
- SupraFAXModem 14.4 w/Caller ID
- Microsoft Mouse II w/BUS Mouse adapter
- Original Atari mouse
- Appoint serial mouse pen and driver

- Software: Atari Works, WordPerfect 4.1, Breakthru 2 (MIDI), Laser C, Straight FAX!, XBoot III, Sound Lab, Diamond Back 3, Touch Up 2.5, Data Diet, Invision Elite 2.0, STeno, Gram Slam, Imagecopy 4.0CD, Pagestream w/500+ fonts, Bitmaker, MegaKern, Mountain Reader II, Cardfile 4.06, STalker 3.05, Maxifile, Warp 9, Speed of Light 3.8, lots more!

- If you need 'em, will also throw in a 25-pin A/B box or two (for swapping between printers or modems), some MIDI cables, surge supressor/power center, lots of floppy disks and a few PC Bus mice that work with the included bus mouse adapter.

Asking $1600 SHIPPED AND INSURED anywhere in the continental United States. Will consider offers.

Please call Mike at (360)830-2277, or send e-mail to mparrott@kendaco.telebyte.net.

In article <N.102796.155846.32@wxs7-11.worldaccess.nl>,
cronos@worldaccess.nl (Richard Karsmakers) writes:
> XBoot doesn't seem to want to work under GEMulator. What to do? Folders are
> displkayed twice using its file selector, and when I try to write a set it
> can't find the path (even though C:\XBOOT\ has been created).
Well, I don't have XBoot, but Thing has similar problems running with the
Gemulator 96 demo with MagiC 5.04 as Kernel. E.g, if you open C:\GEMSYS, you
get into a directory which simply has another GEMSYS-folder in it, which is
empty.

I guess this has something to do with the problem that Gemulator doesn't seem
to catch all GEMDOS-calls for directory- and file access correctly.

You even can't access drive U under MagiC, and MagXDesk is unable to write its
INF-File.

Ciao

Thomas

: I look for N.AES on web/ftp sites?

You can look all you want on ftp sites, but you shouldn't find it,
because N.AES is commercial. As far as I know, it's only distributed in
Germany. I'd love to be corrected, though. If you're looking for a good,
free AES, I can now recommend XaAES, since it now runs relatively well on
my TT for much longer than it used to.

1720. Eureka a graph describer and 3D modeler

Newsgroup: comp.sys.atari.st
Date: 1996-10-30 00:00:00 UTC
From: lecoat@chronos.ief-paris-sud.fr
Message-ID: <557shg$hqm@upsn6.u-psud.fr>
Source record: 135056

Hello everybody,

I'm a french developper working on a program called Eureka 2.12.
It's a 2D numerical analysis program, and a 3D modelling of
mathematical shapes. It also includes 4D presentation, because
a time parameter is available. It's quite easy to make movies
showing the evolution of a formula in 3D rotating, morphing from
a shape to another etc... Data files can be loaded so that you can
manipulate series, or even stereo/mono sample files manipulating
sounds. Images can be produced, computing them with formulas to
draw fractals such as Julia or Madelbrot sets. You can even map
these images on a 3D surface, producing impressive representations.
Since the last revision of my program it is now in two languages
French and English. The english translation of the documentation
will be soon available. My goal is to make a program like some
on other platform such as Mathematica or Matlab.
My work is a complete package including the program and some
accessory like a snapshot, an unusual recording accessory that
allow you to demonstrate the program like a mecanical piano would
play Stravinsky (?). There's a program that can show your movies
etc ...
The latest english version is available on my home page at :
http://www.ief.u-psud.fr/~lecoat/
That page is mainly illustrated with my program so that you can
see what is possible to do. Eureka has 3D2 Raw and VRML exports
so you will see Virtual reality demonstrations of objects, and
movies or images produced with Persistence Of Vision.
The latest revision will also be available soon by FTP on the
"Conservatoire National des Arts et Metiers" at :
ftp://ftp.cnam.fr/pub/Atari/Applications
Anyway for any problem report in my mailbox at :
lecoat@ief.u-psud.fr
Any suggestions are also welcomed ...
Have fun with my production, bye for now ...

1722. EARN $50.000 LEGITIMATELY IN 6 WEEKS

Newsgroup: comp.sys.atari.st
Date: 1996-10-30 00:00:00 UTC
From: rr34938@pinus.cc.etf.hr
Message-ID: <5584mc$qn6@bagan.srce.hr>
Source record: 135058

PRINT THIS OUT AND SAVE THIS POSTING ON YOUR COMPUTER,
READ IT OVER A COUPLE OF TIMES,
INVEST,
AND WATCH THE MAIL BOX FOR THE MONEY!

$5, plus the costs of 5 envelopes, 5 peices of paper, 5 stamps and
a couple of hours on a computer and get $50,000
or more back in about six weeks!!!!!!!

Invest in this TOTALY LEGITIMATE oppurtunity,
Remember that this is legal, so you should report the profit of your
investment on your taxes.

Hello, I saw this news group posting and decided to invest $5 into
it and see what I get in return. Hey, what's $5 ? Keep my address and
keep in touch on the amount of money you get. In the posting I saw the
person had done this before and made $47,326 in six weeks with his $5 and
the cost of the stamps to mail the $5 to the five people on the list.
This was his second round. If you do more than the 200 listings you will
make more money.

In this day what does $5 get you, and with all the people on the
internet you are going to get you $5 back in days.

Make $50,000 with a small amount of effort and a small cost of only
$5 and a few hours of computer work (after you have saved this article on
your computer, you can use it to compose your own article, if you want;
just make the neccesary changes, like changing the names below; it should
save you a couple of hours of computer work).

This is a chance for the average person to get ahead in life so
please send out $5 and put a little effort into your postings, and then
watch the money roll in.

This investment will cost you only $5, five stamps, envelopes, paper
and a little computer work. If YOU and EVERY OTHER INVESTOR is HONEST and
follows through with the plan, you will make $50,000 in about six weeks.
Each investor will also make $50,000 in six weeks.
THIS IS A LEGITIMATE INVESTMENT OPORTUNITY !!!!!!!
When the money comes in, make a list of your investors, and you just
started your own ORDER SERVICE COMPANY (don't worry, you don't have to do
anything special, just read this article to the end, and you will get all
the information you need). Since you are starting a company
that provides a service, you make the money LEGITIMATELY (that's the
whole idea about this company business). The service you provide is the
"list of investors" that you have compiled.

You invest $5, and you receive a return on your investment. So does the next investor. NOT ILLEGAL, NOT A CHAIN LETTER - PERFECTLY LEGITIMATE.

There are other plans like this out there that ask you to send out $10 to five pepole, thats a fifty dollar investment and its hard to give $50 out when you are struggeling to pay the bills already. But with this plan you only invest about $5 and others only invest about $5. Hey what's $5 now-a-days? You could probably find that in the cracks of your couch.

If you are not interested, than don't participate, but please print this article and pass it on to someone who may be interested, so they can take advantage.

THIS IS WHAT YOU DO:

The procedure is simple:
1) Write your name and address and an e-mail address, on 5 sheets of paper. Below that, write the words: "Please add me to your list". Then fold a $1 in each piece of paper (make sure the money is inside the paper, so that it can't be easily stolen, send no coins) and send them to the following five addresses:

1. Allen Malkowitch
23 Baker Street #712
Denver CO 80203
USA

2. Wilma Vogel
Broettenstr. 19/25
9020 Klagenfurt
AUSTRIA

3. Lenny LaForget
364 Delisla
Chicoutimi
G76 3B4
CANADA

4. Goran Stojsic
Ljubljanska Avenija 2
236/B
10000 Zagreb
CROATIA

5. Robert Radovic
Ljubljanska Avenija 2
224A/A
10000 Zagreb
CROATIA

2) Now remove the top name from the list, and move the other four names up. In other words, #5 should become #4, and so on. Put your name as the fifth one on the list. Any simple text editor will do.

3) Post the article to at least 200 newsgroups. There are 17,000 of them these days, so it shouldn't be hard to find many. Spend some time on your investment and post to as many newsgroups as you can, and the bigger the newsgroup is, the more people are to see your message and the more money you make. So post to as many as you can.

You are now in an ORDER SERVICES BUSINESS, and should start seeing returns within a week or two. Of course, the more newsgroups you post to, the greater your return is. If you wish to remain anonymous, you may use a psuedonym, call yourself, "The Manager", of "The Boss", whatever, but make sure your address is correct.

HERE IS HOW THE SYSTEM MAKES MONEY:

-Of every 200 posts I made, I received 5 responses. Yes, only five. You make $5 for every 200 posts with your name at #5.

-Each person who sent you $1 now also makes 200 additional postings with your name at #4. i.e. 1000 postings. On average therefore, 50 people will send you $1 with your name at #4. You make $50.

-Your 50 new agents make 200 postings each with your name at #3 or 10,000 postings. Average return= $500. They make 200 postings each with your name at #2= 100,000 postings= 5,000 returns at $1 each= $5,000.

-Finally, 5,000 people make 200 postings each with your name at #1 and you get a return of $50,000 before your name drops off the list. AND THAT'S IF EVERYONE DOWN THE LINE MAKES "ONLY" 200 POSTINGS!

From time to time, when you see your name no longer on the list, you can take the latest posting that appears in the newsgroups, and send out another $5, and put your name at #5, and start posting again. Remember, 200 postings in only a guideline. The more you post, the greater the return.

Let's review why you should do this. THE ONLY COST IS $5. Anyone can afford $5 for such an effortless investment with such SPECTACULAR RETURNS!

You may ask, "what happens if the scheme is played out and no one sends me money?" Big deal, you lose $5. But what are the chances of that happening? We are talking about the Internet here.

There are millions of Internet users, and thousands more joining everyday! YOU CAN'T LOSE!!! There are too many people out there to not miss this message, and there will be thousands new tomorrow.

Remember, read the instructions CARFULLY, and PLAY FAIRLY. That's the only way this will work. Get a printout so you can refer to this article easily.

REMEMBER-HONESTY IS THE BEST POLICY. YOU DO NOT NEED TO CHEAT THIS IDEA TO MAKE MONEY!! BESIDES, NOT PLAYING THE GAME FAIRLY IS ILLEGAL. SO LET'S BE REASONABLE AND PLAY FAIRLY, SO WE CAN ALL ENJOY THE INTERNET GOLD MINE.

GOOD LUCK!!!! :)

Well, I called Toad Computers this morning, and they confirmed that this was probably the last Atari-fest they would have...(wish I could have made it--I took off the first 2 weeks in Dec. so I could finally go to one and look what happened! Just my luck...) Anyways, they are

-NOT-

quitting the Atari market...Jennifer said they were just not getting enough new stuff to showcase for a 'Fest...They would still have the core products on hand, in other words, business as usual...Guess I should have talked to them first, huh? Live and learn...(Jennifer has a fine sense of humor--when I asked her about this subject her first reply was, "Well, I answered the phone didn't I?", followed by "We have things to sell if anybody wants to buy...what do you want to buy today?" <big sheepish grin>) SO out of embarrassment and self-defense, I bought an EZ135... (Okay, okay, I really did need it anyways...) <smile> Anyways, put it all off to my semi-paranoid state of mind...(can we blame lack of sleep? I am a Sysop, after all....) %^)

: p> drive, found in any computer shop (and built essentially for
: p> PCs or Mac's) on a Atari 1040 STF?
:

My suggestion...

Call Toad (email sales@toad.net),
Order Yourself a Syquest SCSI EZ135, an ICD Link, and the correct
cableing...
(the cable that comes with it is an odd-ball...toad'll know what you need)
(You'll need Standard SCSI external to SCSI external)

If you're in Europe...ask for an Atari dealer here on these News Groups,
as I'm not sure who over there is carrying the ICD link...of course you
can find the EZ135 mail order all over the world.

Here's why I suggest this drive...
It's fast...
It's removeable...
130meg...platters are around $30 US a piece max.
It comes in a case already...so you don't have to get a pricey shoebox.
The EZ 135 is selling in the $130.00 US range and lower.

The ICD Link is the latest, smallest, simplest, and most compatible SCSI
adapter for the ST. It's about the size of a Cigarette pack, and doesn't
require that you mount it in an external chassis. You simply plug it into
the back of your ST, run a SCSI cable to your EZ 135, install the software
that comes with the Link, and that's it!

The IOmega Zip drive is also nice...it comes in a fancy case...
BUT...it's a bit more than the EZ 135 in price...it's only 100meg,
it's not quite as fast, and you'll have to run power to the Link from
somewhere (possibly the joystick port of the ST) because it doesn't
provide SCSI termination power.

Most any SCSI drive will work with the Link...
If you decide to go for a regular hard drive, remember you'll
need a case for it that has a power-supply. By the time you get
a case and power-supply...no doubt you'll have spent more than an EZ 135
and Link will cost you.

--

I had a similar problem with window sounds when I last used it on my Falcon.
I guessed that it had something to do with another auto prog that I'd
installed since I last used it, but had to come back to university before
I got a chance to check it out.

Either way, I suspect there would be no effect on sounds triggered explicitly
by another program, which was the original point of the thread, so even with
minor problems like this, I still stand by my statement that it is a better
solution than trying to mess about with another system if a program wants
to call sounds from an 'audio server'.

Cheers,

Xav

1732. Writing Live Redbook Audio CD's; how?

Newsgroup: comp.sys.atari.st
Date: 1996-10-31 00:00:00 UTC
From: v.e.bakker@getronics.nl
Message-ID: <55aj88$1ae@dinkel.civ.utwente.nl>
Source record: 134918

It seems the programs that write redbook audio cd's with a minimum of 2 sec. delay between the tracks are more standard than programs that write the tracks with a 0 ms. delay (like, in live recordings).

Anyone know how to create 'live' CD's on a Falcon?

thanks,
Vince

Being sold out should not be an issue here, if you subscribe then you
should be assured of your copy BEFORE the mag goes on general sale,
and the mag was on general sale at the ATARI shows,

It is more likely that its a hickup, issue one of a brand new mag,
these things happen...I presume:)

/IF/ you happen to own a host adapter that handles parity properly, then a Mac drive will be no problem. Bear in mind that the older ICD adapters, the Supra, Berkeley System, and the Atari (Megafile, Mega STe) host adapters don't work with parity. I think the ICD Link is also a no-go, but the Link 2 is OK, and Link 96 is definitely OK. I don't know about Gasteiner or any other brands.

The problem is that most Mac drives have parity permanently enabled. You may be lucky enough to find one that has a jumper that can be removed (or installed) to diable parity.

>You can tell if the drive is SCSI by looking at the connector - a SCSI
>interface is connected by 2 rows of 25 pins.

Wellll.... SCSI-1, yes. There are also 68-pin and 80-pin connectors that look a bit like the SCSI-2 connector on the back of the Falcon. An adapter is available that converts the 80-pin (SCA) connector to the standard 50-pin ribbon connector; I haven't found one for the 68-pin connector yet.

I can buy a TT030, 4Mb ram, 19" monitor for US$500.
A couple of questions. I like atari (own a stfm, portfolio)
and would like to have an X terminal for my 486 running linux.
Can this TT be a X terminal? i.e. does linux runon this machine?
Is us$500 a good deal? (oh, the harddisk was 105Mb).

The rough rule of thumb for these devices is to partition and
format them on the IBM (under 32 meg partitions) if you intend to move
files. Otherwise the scsi versions work quite well on the Atari with Atari
or ICD formatting and partitioning and Linx.
They will have a 1.3 Gig out soon.

>>Anyone else using Newsie, I've only just discovered it and it looks
>>pretty good.

>Looks good offline, but it won't go with GlueSTiK :(

Yes, I've been in communication with the author of Newsie on this.
Basically, he is checking STiK's carrier detect function to make sure
the modem is connected before attempting to resolve hostnames, in order
to avoid a bug in recent STiK versions. GlueSTiK can't really support
the carrier detect function (and so you should be sure to set
CDVALID=FALSE in your configuration file) --- after all, what does
"carrier" mean when you're connected to an Ethernet? According to the
author, future versions of Newsie will handle this check more
intelligently.

Subject: BIG news!

BIG news!
By Donald A. Thomas, Jr.

The election is coming up. That seems to be important. It's big news each night on radio and television lately. When I think hard about it, I am not sure why. Many people feel, as do I, that politicians say what they have to in order to be elected. Who knows what they'll really do in office. Even if I gloss over that admittedly defeatist viewpoint, there remains another popular viewpoint that the election is already decided... at least this year anyway.

I suppose it's tradition. We all have to talk about it and hear about it just because it's America's ultimate soap opera. After all, obvious slam dunk elections have turned up as big misses at the polls in the past. It could happen again. As for me, I'd just love to see an innovative game company develop a program that pitched famous politicians against each other. Since the early days, when Activision released their blocky "Boxing" game in 1980, one-against-one bouts have been a popular video game subject. I'd love to see Clinton and Dole go at it in a video game. Perot makes a great on-deck challenger too! I suppose they'd have to V-Chip the game and gray out any blood scenes. I should run for President. I'd love to be in that game to throw some punches. Hey, everyone, write me in! <g>

"Turning Point", a popular television news magazine, featured an in-depth life-after-death segment the other night. Do you suppose there's a coincidence that Halloween is around the corner? Nah, they wouldn't be that corny, would they? The only explanation is that it must be big news. Personally, the entire concept seems to me to be more philosophical than newsworthy. If it wasn't for my family tying up the television, I would have preferred to play "Crypts of Chaos" (20th Century Fox, 1982), "Demon Attack" (Imagic, 1982), "Entombed" (USgames, 1982), "Frankenstein's Monster" (Data Age, 1983), "Ghostbusters" (Activision, 1984), "Ghost Manor" (Xonox, 1983) or "Haunted House" (Atari, 1981). Although none of those equal the notoriety earned by the likes of "Asteroids" (Atari, 1981) or "Missile Command" (Atari, 1980), they were all fun, share a spooky theme and helped wear the metal contacts thin on my Atari 2600 cartridge port.

So the world is changing. No one cares if our President ever inhaled and schools turn in six year olds for kissing classmates to show affection. (Just imagine the outcry if "Custer's Revenge" (Mystique, 1982) was released in today's climate.) Sports games are hot news to gamers, but the mainstream

press never mentions them. There's not enough room in the newspaper after you cover the more important non-sports news, you know what I mean, don't you?, the strikes, the spitting, the car crashes while boozed up. I think there's more real game action at Little League. For me, a good game of "Real Sports Baseball" (Atari, 1982) or "Bowling" (Atari, 1978) gives me all the virtual sports action I ever needed and the players never wind up being arrested.

Yes, the world is changing. "PacMan" peaked when he made the cover of "Time Magazine" in the October 25, 1982 issue.

They don't still sell Ralston's "Donkey Kong" cereal (1982) any more, right? I don't know. I stopped helping to pick cereal when I stopped seeing those cool video game promotions on the backs of packages each month. Yea, I see them sometimes now for a complete PlayStation system or a Big Screen TV, but it's not the same. They used to give away trips to Atari Headquarters and full size arcade games. I still have a couple dozen of the scratch off cards handed out at McDonald's restaurants in 1982 based on popular video games. Why don't they do things like that anymore?

It was April 1976, when Atari first released the coin-op version of "Breakout". I remember sharing time with a friend at a convenience store well past midnight on one of those machines. Through the cigarette-stained glass and our own smoke filled eyes, we would stare at colored "bricks" and bouncing pixels for hours on end, driving the four-cornered ball past the front rows of bricks and into a wild frenzy against the back rows through a corridor at one side of the screen or another.

Back then, things were different. No one heard of Aids and teenagers were afraid of being caught at something rather than catching something.

I wish I kept the old newspaper clippings I saved back then. I one day threw them away because it was clear to me then that video games and home computers were front-page topics forever. I never had enough room to store all that paper. There were great video game magazines then just as there are now too. Back then, though, even "Playboy" and "Popular Science" talked about the new form of adult toys that integrated sizzling visuals, tantalizing sounds and responsive joysticks into one heck of a good time. Do they still cover those topics anymore?

So who is buying these great new video games in stores today? Do none of these people watch television or read newspapers? Why is it that the video game industry is so huge, but new product releases and great top-notch programmers hardly ever rate in the entertainment sections? Where is Warren Robinett lately? Who's he dating? Is he married? Children? Why isn't he ever in the celebrity round-up section of USA Today? (Please don't tell me you don't know who he is. You'll really make me sob.)

By the way, one of the institutional founders of the gaming industry proverbially died a few weeks ago. JTS, a disk drive company, absorbed all of Atari Corporation's assets and pretty much soaked it all up with few traces of the monolith that once stood. Ever see the witch melt in Wizard of

Oz? Kind of the same thing, except muted.

No big deal though. After all, Atari's final fall is not nearly as big news as predetermined elections, kissing babies, spitting athletes and Halloween stories of an afterlife. Is it?

Subject: Did you say "Goodbye"?

Did you hear anyone say "Goodbye"?
==========
by Donald A. Thomas, Jr. (10/4/96)

It's odd to imagine an institution, which was as big and as powerful as Atari once was, to have been shut down in recent days. The real amazement for me is that it was all accomplished without a measurable flinch from within or outside the gaming industry. I can understand that gamers wanted to push Pong out the door early in the timeline. I can appreciate that the classics such as Missile Command and Asteroids do not push 32-bit and 64-bit systems to any technological limits. I know all these things intellectually, but the heart cannot face the truth that the world and the corporate machine known as Atari could not find an amicable way to coexist.

On Tuesday, July 30, 1996, Atari Corporation took each and every share of it's company (ATC), wrapped them all in a tight bundle and presented them to JTS Corporation; a maker and distributor of hard disk drives. On Wednesday, the shares were traded under the symbol of JTS. Within a few weeks, the remaining staff of Atari that were not dismissed or did not resign, moved to JTS' headquarters in San Jose, California. The three people were assigned to different areas of the building and all that really remains of the Atari namesake is a Santa Clara warehouse full of unsold Jaguar and Lynx products.

It was only as long ago as mid '95 that Atari executives and staff believed things were finally taking a better turn. Wal*Mart had agreed to place Jaguar game systems in 400 of their Superstores across the country. Largely based on this promise of new hope and the opportunities that open when such deals are made, Atari invested heavily in the product and mechanisms required to serve the Wal*Mart chain. But the philosophical beliefs of the Atari decision makers that great products never need advertising or promotions, put the Wal*Mart deal straight into a tailspin. With money tied up in the product on shelves as well as the costs to distribute them to get there, not much was left to saturate any marketplace with advertising. While parents rushed into stores to get their kids Saturns or PlayStations, the few that picked up the Jaguar were chastised by disappointed children on Christmas day.

In an effort to salvage the pending Wal*Mart situation, desperate attempts to run infomercials across the country were activated. The programs were professionally produced by experts in the infomercial industry and designed

to permit Atari to run slightly different offers in different markets. In spite of the relatively low cost of running infomercials, the cost to produce them and support them is very high. The results were disappointing. Of the few thousand people who actually placed orders, many of them returned their purchases after the Holidays. The kids wanted what they saw on TV during the day! They wanted what their friends had! They wanted what the magazines were raving about!

In early 1996, Wal*Mart began returning all remaining inventory of Jaguar products. After reversing an "advertising allowance" Atari was obligated to accept, the net benefit Atari realized was an overflowing warehouse of inventory in semi-crushed boxes and with firmly affixed price and security tags. Unable to find a retailer willing to help distribute the numbers required to stay afloat, Atari virtually discontinued operations and traded any remaining cash to JTS in exchange for a graceful way to exit the industry's back door.

Now that JTS has "absorbed" Atari, it really doesn't know what to do with the bulk of machines Atari hoped to sell. It's difficult to liquidate them. Even at liquidation prices, consumers expect a minimal level of support which JTS has no means to offer. The hundreds of calls they receive from consumers that track them down each week are answered to the best ability of one person. Inquiries with regard to licensing Atari classic favorites for other applications such as handheld games are handled by Mr. John Skruch who was with Atari for over 13 years.

In spite of Nintendo's claim that their newest game system is the first 64-bit game system on the market, Atari Corporation actually introduced the first 64-bit system just before Christmas in 1993. Since Atari couldn't afford to launch the system nationwide, the system was introduced in the New York and San Francisco markets first. Beating the 32-bit systems to the punch (Saturn/PlayStation), Atari enjoyed moderate success with the Jaguar system and managed to lure shallow promises from third-party companies to support the system. Unfortunately, programmers grossly underestimated the time required to develop 64-bit games. The jump from 8-bit and 16-bit was wider than anticipated. In addition, Atari was already spread thin monetarily, but were required to finance almost every title that was in development.

After the initial launch, it took Atari almost a year before an assortment of games began to hit store shelves. Even then, having missed the '94 Holiday Season, many of the planned titles were de-accelerated to minimize problems caused by rushing things too fast. Consumers were not happy and retailers were equally dismayed. The few ads that Atari was able to place in magazines were often stating incorrect release dates because that information changed almost every day although magazines deadline their issues up to 120 days in advance.

It was in 1983 that Warner Communications handed Jack Tramiel the reins of Atari. By this time, Atari was often categorized as a household name, but few households wanted to spend much money on new software and the systems were lasting forever. No one needed to buy new ones. That, combined with

Warner's obscene spending, amounted to a *daily loss* of over $2 million. Atari was physically spread all over the Silicon Valley with personnel and equipment in literally 80 separate buildings; not considering international offices and manufacturing facilities. Mr. Tramiel took only the home consumer branch of Atari and forced Warner to deal with the arcade division separately. Within a few years, Jack took the company public, introduced an innovative new line of affordable 16-bit computers and released the 7800 video game system.

To accomplish these miracles for Atari, Jack implemented his "business is war" policies. While people who publicly quoted his statement often felt that policy meant being extremely aggressive in the marketplace, the meaning actually had closer ties to Tramiel's experience as a concentration camp survivor. Of the 80 buildings in Sunnyvale, Santa Clara and Milpitas, almost every one of them were amputated from Atari's body of liabilities. The people, the work, the heritage, the history were fired or liquidated. Those who survived were unsympathetically required to fill in the gaps and while most tried, few actually found a way to be successfully do what a dozen people before them did. Atop the mountain, Jack pressed with an iron thumb. All Fed/Ex mailings were required to be pre-approved by one of a handful of people. "Unsigned" purchase orders went unpaid regardless of the urgencies that inspired their creation. Employees found themselves spending valuable time trying to find ways around the system to accomplish their jobs. Many of them lost their jobs for bending the rules or never finding a way to make things work. As horrible as it all sounds, it actually was the only way to protect Atari as a company and give it a chance to survive, as it did and did very well.

Jack's introduction of the 16-bit computer was initially hearty in the United States but it went extremely well in Europe. Europeans were not accustomed to "affordable" technology and although the Atari computers were not IBM compatible, it didn't matter because people could afford them. Jacks' private laugh was that the computers were sold at prices much higher in Europe than Americans were willing to pay. As a result, most of the machines made were being shipped to European destinations to capture the higher margin. This enraged the people in the United States that had been Atari loyalists. While waiting months for stores to take delivery domestically, international magazines were touting ample supplies. Those in the know within the U.S. became dismayed. The remainder never knew Atari was slowly abandoning the value of Atari's name recognition as it became easier and easier to forget, some assuming Atari had long filed for bankruptcy.

On a technical level, Atari 16-bit computers were designed beyond their time. For less than $1,000, consumers could enjoy "multimedia" before the phrase was ever really widely used. The icon-based working environment proceeded Windows popularity although the essential attributes of the two environments were very similar. MIDI was built-in and became an instant hit in the high-end music industry. Tasks were activated and manipulated with a mouse and the system accepted industry standard peripherals such as printers, modems and diskettes.

With all the genius that went into the technology of the machines, very little of equivalent genius went into the promoting and marketing the machines. Mr. Tramiel was the founder of Commodore Business Machines. When he introduced the PET computer in 1977, Jack discovered he didn't have to call a single publication. Instead they all flocked to his door demanding an opportunity to see the product. News magazines. Science Journals. Business newsletters. Newspaper reporters. They were all there with microphone, camera and pen in hand. And they kept coming back. Adding a switch, announcing a new 4K application or signing a new retailer were all big stories the press wanted to handle.

Today, a new video game announcement may generate a request from any of the dozens of gaming magazines for a press release, but a lot of costly work has to be done to assure fair or better coverage. Editorial people are literally swamped with technical news. Samples are mailed regularly to their attention. Faxes fly in through the phone lines and e-mail jams up their hard drives. It takes a lot to grab their attention.

While Atari retained hopes to be successful with the Jaguar, Atari's marketing people were fighting established standards in the industry with severe handicaps. Since cartridges (the Jaguar was/is primarily a cartridge-based system) were so expensive, editorial people were required to return them before new ones would be sent. Editorial people like to assign review projects. So finding cartridges they sent out was not always easy to do. Additionally, reviewers often love their work because they get to keep what they write about. Regardless, the few magazines willing to cover Atari products were more often turned away because of a lack of programmable cartridges or any number of other indecisive barriers. In-store signs and posters were sometimes created, but many retail chains charge premiums to manufacturers that want to display them. Some direct mail campaigns were implemented, but Atari often could not afford to keep those things being advertised on schedule. Therefore, the advertisements were published and distributed, but the product was not available.

Clearly, Jack's experience with the world beating a path to the door of a company making a better mousetrap no longer applied. The world had revolved a few times beneath him and he never noticed. The tactics used to successfully sell Commodore computers were simply antiquated notions from the past. Meanwhile, Sony launches the PlayStation with over $500 million in marketing funds. Today, the PlayStation is considered the most successful next-generation gaming machine throughout the world. Sony bought the market. Tramiel's Atari never learned how to do that. Actually, they never could afford it anyway.

After the 1990's got underway, Europe as well as the rest of the world, discovered that IBM-compatible computers were becoming more powerful and more affordable. The world always did want computers at home just like in the office and companies like Dell and Gateway exemplified the industry's trend toward home-based office computers. As a result, companies like Commodore, Atari and Next couldn't compete any longer. While the dedicated user base of each of them felt abandoned by these companies having to leave the computer market, the inevitable prevailed. Commodore jumped ship, Next

changed business goals completely and Atari invested what they had left in the Jaguar game system. Even today, Apple is kicking and screaming. As good as Apple was at creating a huge niche for themselves, they focused more heavily on education. When kids grow up and get jobs, they want business machines. IBM was always the business standard.

When one examines the history of Atari, an appreciation can grow for how many businesses and people were a part of the game over the years. Chuck E. Cheese Pizza was started by Atari's founder, Mr. Nolan Bushnell. Apple Computer was born in a garage by ex-Atari employees. Activision was founded by Ace Atari programmers. The list goes on and on.

But for some pathetic reason Atari's final days came and went with no tribute, no fanfare and no dignified farewells. Why? Where did all the talent go? Where are all the archives? Where are the vaults? Where are the unpublished games and where are the originals of those that were? Why has no company stepped forward to adopt the remaining attributes Atari has to offer? Where are the creditors? What has happened to all the properties and sites? Where are the databases, warranty cards, promotional items, notes on meetings, unanswered mail? Who owns P.O. Box 61657? Who goes to work in Atari's old offices? Where do consumers have their systems fixed? Who is publishing new games? Who still sells Atari products? Why are there still a lot of people talking about Atari on-line?

I'm an ex-Atari employee and proud to have been. I'm still an Atari devotee and proud to be. To me, these are questions which all deserve an answer, but who will ask them?

The best people to ask these questions are those who have exposure to the public. If you believe Atari left us without saying goodbye, contact Dateline at dateline@nbc.com. If you REALLY believe, then send this article to 10 of your friends in e-mail. AND if YOU REALLY, REALLY believe, mail a few to newspapers or other news programs. A letter in your own words would be great!

I'd spend money for a thorough retrospect on Atari. Wouldn't you?

Wouldn't it at least be nice to say "Goodbye"?

If you know the filename, then all you do is an Archie search.

There's web searchers like shareware.com, but it may be more miss than
hit. I'll see what I can do with those and if successful will let you
guys know.

Well, since I never have a car that's able to make it to Maryland...guess
I no longer have to worry about attending one then :)

I'm sure they may have something that's like an informal Fest, my local
Atari user group was disbanned months ago because few people show up. But
we still meet about once a month and shoot the bull on Atari and stuff :)

Yeah, Jenn and Dave help got me my Beetle Mouse when they were out of
stock and had to import more from England.

You know something brother...now we live in a world of Windoze/Intel
computers and the World Wide Web and people would think that those things
will kill of the ST platform since it couldn't keep up.

But now, we got emulators that keep getting better and better and not only
does the ST have a graphcal browser, but the Internet is the biggest sorce
of Atari support around the world.

And the likes of Silly Sinclap and Billionare Bill can't stop it. :)

Brian, the STiK CDVALID configuration value is probably FALSE in your
config. Changing it to TRUE should solve your problem. Newer
versions of NEWSie have this covered, as well as support for GlueSTiK,
which according to the author (Scott Bingham) defaults to
CDVALID=FALSE.

Freaky! Hmmmmm. I don't know how to respond to that...

And I developed it on my Falcon, so it defintely is not Falcon shy.

I have Lord British's Ultima II: The Revenge of the Enchantress up for
auction at the Auction Web --
http://www.ebay.com/aw/item.cgi?item=jpq78054

It is complete with box, docs, and of course, the 17"x22" color cloth
map. Everything is in excellent condition. The map is like new (it's
been in the game box for the past few years).

This is the Atari ST version.

Check it out!

Thanks.

Source record: 134946

I need some help quite urgently as I'm in the middle of scoring a film and my ST won't boot. I have several different auto folders on different disks, with UIS_II and Genmouse (for serial mouse), and Fuji. Some disks have Slectric instead of UIS_II. When there is no floppy in the drive, the computer usually boots anyway (from a ROM chip??) but it is no longer doing this. When trying to boot from a floppy the UIS_11 loading msg appears on the screen, followed by the Genmouse msg. The screen then flicks back to white, repeats this process and then goes black. I recently downloaded some accs and prgs from the net (Slectric, Chameleon, MKM_II) so I don't know if these could have caused this problem or whether the ST has finally died. If anyone can offer me any insights, I would be most grateful as I have a deadline looming and will habe to go out and buy a new computer if this can't be fixed
thanks in advance

: PD utilities that will allow me to do this? Exactly what are the programs and
: steps involved in formatting a PC partition from an Atari which can be read
: and written to on the Atari?

I think EZ135 is not much different from the Syquest 105MB medium. These media
always are partitioned by the manufacturer. If your harddisk driver can't
read this partition, you won't be able to partition it DOS-like, at all.

Just thought you all might be interested to know that as of version 0.7b
GEM-DEU now supports SAM for sample playback (or custom Falcon only routines
if it is not installed). Adding SAM support took 2 (yes TWO!!) lines of C code,
so it would be trivial to make eg. CAB play .AVR samples when selected rather
than calling an external application to do this...

Is there any chance of anyone coming up with a decent newsreader for
MiNT? I've tried TIN, which seems to randomly lock up, especially
when downloading from binary news groups. And it's painfully slow
for NNTP.

Mike White

P.S. Has anyone tried to recompile TIN on a 68000 machine? I tried,
and my exectuable is four times the size of the executable provided
with TIN. And my version bombs soon after starting up. I'm using
gcc, BTW. Any help would be greatly appreciated...

1767. Gribnif Software email and Web addresses

Thanks for your message Don. I, too, find it amazing that Atari could not only fall from greatness, but disappear. At one point in the early 80's, Atari was one of the top 5 recognized brands in the U.S. (#2, I think.)

Having worked with (not for) Atari for many years during their peak, I have my own rational as to what happened, and why. It's sad.

From: ag352@chebucto.ns.ca
Message-ID: <559e7h$b7l@News.Dal.Ca>
Source record: 134957

My Spectre GCR MAC emulator has not fully recovered from a system error
that happened while I was running in mac mode recently. The SYSTEM file
was corrupted in some way, so I trashed it and copied the original from a
diskette back into the System folder on my mac partition. Runs fine now,
but WON'T FORMAT A FLOPPY IN MAC MODE. Drive stops spinning about 7
seconds after the INITIALIZE/DOUBLE SIDED command.
Any suggestions? Anybody else still using this old emulation system?

John S. Gray, Halifax, Canada

From: Paul.Muehlbauer@flight.org
Message-ID: <406_9611040105@flight.org>
Source record: 134959

pn> However, I believe it is possible to use the Atari to access
pn> the Internet. Could someone therefore please tell me exactly
pn> what I need to do this, which software and hardware and how
pn> much it will cost. No fancy jargon or mind-numbing
pn> abbreviations please.

You can access the Internet through a 'shell.' Use most any telecommunications program. You end up using unix commands from the computer you are connected to to access the internet. This is a bit cryptic at first, and basically no pictures, sounds, etc. Just e-mail and file downloads. You have to find a provider that allows shell access.

There are several web software packages available for the Atari. They are kinda still being finished, so some aren't working real well yet, and some don't have all the bells & whistles yet. You will be rather cramped with 1 meg of memory, but it is possible. Do you have a hard drive? Without that, you will be _very_ cramped. Others can do a better job explaining these options, but they might forget you have 1 meg of memory...

pn> PS Also is there a good word processor available for the ST ?

There are several. Most that I like use 2 megs of memory or more... If you don't need all the fancy fonts & so forth, there are several good PD/shareware word processors available. Since I own Papyrus, others will have to talk about the PD/shareware word processors.

pn> PPS Please dont flame me with "Read the FAQ" type replies coz
pn> I cant find one.

No problem! :) In fact, I really didn't even help you much, did I?

Yes it is!

>Could someone therefore please tell me exactly what I need to do
>this, which software and hardware and how much it will cost. No
>fancy jargon or mind-numbing abbreviations please.

I'll try to help you out. Mail me with information regarding your supplier
about what kind of connection you can get and I'll give you the lowdown.
In addition you can write to me in Swedish since I see your mail comes from
my neighbouring country ;-)

>PS Also is there a good word processor available for the ST ?

Yup. I don't have it myself, but I've heard a lot of people say nice things
about it, and I've tried the demo which is excellent! The program is called
"Papyrus".
As for pure ASCII text-editors you can get away with free/shareware
packages... there are several good ones available, most notably "7up",
"Everest" and "Edith"/"Edith pro".

>PPS Please dont flame me with "Read the FAQ" type replies coz I cant
>find one.

You can find the FAQ's at:

ftp://ftp.sn.no/user/hallvart/atari/info/

47K faq1_st.txt Atari ST Frequently Asked Questions part 1
30K faq2_st.txt Atari ST Frequently Asked Questions part 2
28K faq3_st.txt Atari ST Frequently Asked Questions part 3

23K n_faq1.txt New Atari ST Frequently Asked Questions part 1
29K n_faq2.txt New Atari ST Frequently Asked Questions part 2
41K n_faq3.txt New Atari ST Frequently Asked Questions part 3

The first 3 files are from the old FAQ while the 3 last ones are from the
new FAQ which includes more recent information, but lacks the advanced
stuff like UNIX, MiNT etc. on the Atari ST.
I suggest you download the new FAQ.

Date: 1996-10-31 00:00:00 UTC
From: dave@mbha.demon.co.uk
Message-ID: <961031Z083304.409dave@mbha.demon.co.uk>
Source record: 135011

Greetings,

Sorry about this guys, it seems all I do these days is ask for help...

I have been trying to get hsmodem7 working om my TT. i use modem2 and nothing else and I lust after decent throughput rates with CoNnect and Starcall.

Starcall and Coma need to have hsmodem running to get 38400 (Coma needs it to run at all!), but I just can't get it to work.

Has anyone got a working configuration for modem2 they can send me the binaries for please? An earlier version that works would be great...

Thanks in advance for any help.

+I have recently bought an Atari 1040 ST for use in a midi setup,
+ie. the Atari is only used to run Cubase sequencing software.
+However, I believe it is possible to use the Atari to access the
+Internet.
+

Yes it is, You need a modem, Cab and Stick (Or one of the internet packs floating round) from an FTP site and an Internet service provider to connect to. like Demon, Compuserve, or something. Connection fee's are around £10 a month if remember correctly and add on top of that the phone bill.

+Could someone therefore please tell me exactly what I need to do
+this, which software and hardware and how much it will cost. No
+fancy jargon or mind-numbing abbreviations please.
+
+Cheers, Pete..
+
+PS Also is there a good word processor available for the ST ?
+

look at an FTP site and get 7UP,

+PPS Please dont flame me with "Read the FAQ" type replies coz I cant
+find one.

Hi All,

Does anyone know how to get the game 'The Chaos Engine' working on
a Falcon?
I've tried Backwards and it just doesn't want to know!!

Help!

TIA
Graham

My understanding is that it's going to be the "ViewMAX" version. At least
as up to date as GEM 3.0. I don't know yet on the status of the Atari
port.
I'll post that info here when I get it.

1786. ACEC Swap Meet is next weekend!!!

Newsgroup: comp.sys.atari.st
Date: 1996-11-01 00:00:00 UTC
From: msteve@magnus.acs.ohio-state.edu
Message-ID: <55brbq$n50@charm.magnus.acs.ohio-state.edu>
Source record: 134864

Just a reminder to those interested in the swap meet, that it will be held next weekend, Saturday November 9th, 1-4 PM at Chemical Abstracts.

We request a $2 donation at the door, and if you successfully sell more than $30, an additional $3. If you need directions to Chemical Abstracts, send mail to msteve@magnus.acs.ohio-state.edu and I shall give you the directions you need. Any other questions can be sent to me as well.

Thank you for your time,

Michael Steve jr.
The Sequel

Here's a reprint of the message sent some time ago...

A C E C S W A P M E E T

We at ACEC have listened intently to the input of those who have attended our event in the past so as to make them happy. This is what we have done this year:

- Some unhappy people have told us, "ACEC, why do you hold this event in the middle of the worst winter weather that Ohio has to offer?"

Our response this year is to move the event from December to November, where the ending of fall tapers into a somewhat less harsh climate (we hope).

- Some other not completely satisfied people have told us, "ACEC, why do you host this event on a weekday making it almost necessary to risk getting a speeding ticket or causing an accident to make it here whilst braving the idiotically harsh elements of Ohio's December"

Our response this year is to not only include the above point but to also move the date from its well known Wednesday slot and bring it to a lesser known Saturday slot.

- Some other people afflicted by unbalanced Chi have told us, "ACEC, why do you host this event so late in the evening that I can't see the cops as they deviously hide behind the darkened snowdrifts on the splendid Ohio Winter Interstates?"

Our response this year to appease these brethren was to not only include the above two points, but also change the schedule to a more brighter timeframe (we hope) of 1 to 4PM.

- Even another group of do-gooders wanting to improve our event told us, "ACEC, why don't you guys serve food at this thing?"

Our response this year is, well, you just can't please everybody can you?

Look for a file called SER38400.LZH/ZIP.

If you know where to find them Atari World Issue 6 and ST Applications Issue 40 have the instructions.

Oh? I've done it on a Mega OK :)

The simple (4040 chip) mod. only affects the MFP. If you can find this you
don't need to know anything else about the motherboard.

I just have a quick look at COPS. It looks great but IMHO zControl is
much better. I use zControl under singletasking and under multitasking
(MiNT/MiNTnet/N.AES) without any problem.
Take also a look to the new Freedom fileselector. With Freedom II
there are no need to use Xcontrol, zControl or whatever you are using.
Freedom II replace these things and have a few extensions (Enhanced
Panel Extensions, EPX)

As I said, it's being reprinted.
The mag was launched at the Atari Shows. If you subscribed _before_ then,
then you've got good reason to complain. Otherwise, like me, you'll
have to wait for the reprint. It's a shame that they didn't tell people
why there's a delay.

1798. CAB+STiK=SHITE!!!!!!!!

Newsgroup: comp.sys.atari.st
Date: 1996-11-01 00:00:00 UTC
From: Mark Gardiner <100550.3170@CompuServe.COM>
Message-ID: <961101133638_100550.3170_EHK74-1@CompuServe.COM>
Source record: 134876

YES! Fucking Shite!

I am so Fucking angry at wasting my time to get this heap of buggy shitty software running on my 4Mb STf.

Everone blindly goes along in the false belief that this is a better solution than Netscape!!! From what I've seen from this crap (and that's not much coz it won't run...) I can see why PC and AMIGA users slight Atarians.

Don't get me wrong. I've loyally had mine (STf) since new 8.5 years back and was excited at the prospect at getting it away from pure MIDI to something else I am equally interested in. I have set up Internet/mail systems for the PC and MAC - both SLIP and PPP and even on a palmtop XT - all run better and were more intuitive to set up.

I got the latest set of STiK and CAB/MGFTP/IRC061 and Telnet from http://www.flinny.demon.co.uk/ and nothing works. I get STiK to dial successfully but try running CAB. If you set the English cab.rsc file it bombs out before loading. If you use the default Deutsch then it'll load up but try getting a URL to load...

I set the cache to either a D:/ Ram disk or the A: (I'm a single floppy no HD) and all I get is read error in file \b\'00000001' ??? what the fuck's that mean?

MGFTP - no different. Enter a site URL *WAIT* click and it Bombs out ...

IRC061 - can never find the irc channel you're selecting. It's there - I get it straight away when I login on the palmtop... I spose it needs a specific .cfg command in the undocumented \config setup that the author hasn't bothered to tell us either...

Telnet - works when it wants to... you can get a connection but no transfer why? how come?

I tried an older version of CAB 1.01 and all I get is out of memory messages when I try to load a URL. How come with 4Mb????

If someone wants to prove me wrong, perhaps mailing me their setup, then I'm willing to eat my words publically, but from what I've picked up in the articles posted here, I'm not the only idiot to try this waste of time...

Mark. :-(VERY!
